Printed specifications and forms of tender can be obtained at this department. All blanks in form of tender are to be properly filled up; and tenders must, as to form, sureties and otherwise comply with the terms set forth in the specifications.

An accepted bank cheque for the amount of Fifteen hundred dollars and payable to the order of the undersigned, must, subject to and upon the conditions mentioned in the specifications, accompany each tender.

Security for the fulfilment of any contract entered into is to be given as stipulated in specifications; but the Department will not be bound to accept the lowest or any tender.

WROUGHT IRON

SHANTY COOK STOVES

The BEST ARTICLE Ever Offered to the Trade.

I have much pleasure in drawing attention to my Wrought Iron Cooking Stove, for Shanty, Hotel and Boarding House use. These stoves are made of heavy sheet iron, the top and lining of the fire box being of heavy cast metal, and all the connecting parts of heavy wrought iron work. The dimensions of these Stoves are as follows :—Top surface contains six 10-inch holes, fire-box 28 inches long, and one oven 28x24x16.

EVERY STOVE GUARANTEED.

All the necessary TINWARE and CUTLERY for Shanties supplied at the Lowest Prices.

IMPORTANT NOTICE TO THE PUBLIC.

I am patentee and owner of Canada patent, No. 42,357—Improvement in Band Saw Mills—which covers a Band Mill with two columns. I am also patentee and owner of Canada patent, No. 42,377—Improvement in Band Saw Guides—which covers wheel guides for a Band Saw. I am informed that a Band Mill is being offered to mill men in the Dominion, containing two columns which is an infringement of the above patent. The public is hereby warned against purchasing such Band Mill, as I shall hold the purchaser responsible for the infringement of my said patents, and for all damages which I may have, or may hereafter sustain, on account of any unlawful use of said patents.

The WM. HAMILTON MANUFACTURING CO., Peterborough, Ont., is authorized to build and sell Band Mills under my patents.

FRANK W. WHEELER,
SHIP BUILDER,
Specifications and Estimates Furnished on application.

WEST BAY CITY, Mich., June 26th 1886.

Mr. D. K. Allington, East Saginaw, Mich.

I have been running your Pat. Band Saw Mill in my new ship yard mill for over one month, squaring up large and long hewn oak timber which has been hewn a sufficient time to be dry and hard on the surface, and sawing long plank from same kind of timber. The timber, or Keelson's squared, was laid up in a vessel, one on top of the other, and fitted as well as could be done by hand, it being square straight and out of wind. I have had a large amount of this plank and timber sawn, and have not yet found a bad cut. I have squared timber where the saw here and there barely cut the thickness of the saw kerf, yet the saw did not deviate the least from a straight line. From the nature of my work I cannot give any idea of the amount cut in a given time, but the speed of cut should be satistactory to any one. The most difficult part of my work is in sawing tamarac ship knees, yet the machine has given me entire satisfaction in this respect, sawing a root having a cut of from 2 to 4 feet, making in every case a true cut.

I do not believe that a saw has been put on the machine in good order, as I have not a sufficient number of saws to give time to dress them well and keep the mill running, yet there has not been one broken or disabled, in fact, a saw must be in bad order that will not run in a straight line when run over your guide wheels.

Yours, truly,
F. W. WHEELER.

WEST BAY CITY, Mich., June 25th, 1886.

Mr. D. K. Allington, East Saginaw, Mich

DEAR SIR:—I have been engaged in running band saws for the past [illegible], and I never before found anything equal to the [illegible] Mill built by you, that I am now filing for. I must say that it is almost impossible to make a bad line if the saw is in any kind of order. We are cutting hardwood, principally long oak, and on account of being scarce of water we have run our saws for five hours and cut as fast as we could conveniently handle, without making any perceptible variation in the cut. I have run various kinds of mills, but never before saw anything to equal it. There has been quite a number of millmen examining it, and all give it up to be the best and truest cutting mill they ever saw.

Respectfully yours,
JOHN A. GREGG

BAY CITY, Mich., Nov. 15th, 1887.

Mr. D. K. Allington, Saginaw, Mich.

DEAR SIR:—Having had considerable experience with Band Mills, I consider myself competent to judge the merits of the same. I started and run one of your Band Mills at Victoria Harbor, Ontario, which was manufactured by the Wm. Hamilton Manufacturing Co., of Peterborough, Ont. I also erected and run your two Band Mills at Wilkes' Peters' mill, at Bay City, Mich., and must confess they are superior to any Band Mill I ever seen, for quality and quantity of lumber produced.

Respectfully yours,
W. A. McCLENATHAN, Fil[illegible]

WEST BAY CITY, Mich., June 24th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been sawing on your Band Saw Mill for the last month, making plank from long square oak timber, partly seasoned, and being short of saws, have had time to have them put in in the best of order, and have to run them five hours without changing, yet I have not broken a saw or made a bad cut, the machine running smoothly, and not having cause to stop for any reason but to change saws, and cutting as fast as other band saws I have run.

Yours truly,
THOMAS GRAHAM.

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

BELL & CO., of Guelph, Ont., organ manufacturers, have discovered that British Columbia spruce when properly seasoned is admirably adapted for sounding boards for their instruments. A large order was recently given by that firm to the Royal City Planing Mills, New Westminster. British Columbia cedar finds its way to Montreal for finishing work in first class residences, as well as to Ohio for railway carriage purposes.

THE miles of completed railways in Canada on the 30th June last were 12,292; that the tons of freight carried in the year amounted to 16,367,987. The passengers carried in the year numbered 10,685,508: that the receipts from passenger traffic were $11,861,597 and from freight traffic $24,581,047. The receipts per train mile were $1.15½ and the expenditure 82 1-10c. The percentage of gross receipts expended in working the railways was 71.12 per cent. The passengers carried were equal to two and one-fifth passengers per inhabitant. The freight to three tons and thirty-five one hundreths of a ton per inhabitant, and that the total earnings were $38,841,609 and the total expenses $27,624,683.

NEW BRUNSWICK lumbermen are greatly troubled over the stream driving prospects. They say that stream driving has not been so bad for years as it is this Spring. The little snow that fell during the past winter dissolved so gradually that it did not swell the waters in the streams, and from present appearances there will be very little stream driving this season. It is expected that the quantity of logs which will be hung up at the brows will be very large unless there should be a big rain-fall within the next week or two. On the Miramichi and its tributaries the driving is not good. In the main river there is fair water for driving and rafting, but the smaller streams are quite low. There is, however, a good deal of snow in the woods and a few days of warm weather will make a freshet.

THE improvements which the Montreal Harbor Commissioners have contemplated for some time will now it is understood be rigorously pushed forward. Work will be begun at Hochelaga, where a new shore wharf and five piers will immediately be put under construction. The increase of frontage for sea-going vessels will be about two miles. For the present an extension of 1,500 feet from the cotton factory, for the accommodation of the lumber trade, and about 1,300 feet with a pier for the sugar refinery will be built. It is estimated that between $250,000 and $300,000 will be expended during the present season.

ATTENTION is directed to two very important communications in this issue of THE LUMBERMAN, both touching upon questions affecting the lumber trade. The article on the Jamaica Trade, from the pen of Mr. A. Spencer Jones, of Ottawa, will, no doubt, be read by many with interest, and we hope with profit also. To the lumber trade closer trade relations with the British West India Islands would prove of incalculable benefit. "Pinus" in another column makes some pertinent suggestions particularly adapted to the lumber trade of the Queen City. We freely invite a full discussion of the *pros* and *cons* of this important controversy.

THE case of St. Catharines Milling & Lumbering Company will be before the Privy Council early this summer. This is the case involving the title of Ontario to land and minerals of the territory formerly in dispute between the Province and the Dominion. Judgments in favor of the Province have already been given in the High Court of Justice, in the Court of Appeal and the Supreme Court, and it is probable that the Privy Council will give judgment on the same side. Hon. O. Mowat has gone to England to prosecute this case and on other public business.

OUR Buffalo contemporary, the *Lumber World*, in reproducing an extract from an article on Commercial Union from THE LUMBERMAN, inadvertently changes a single letter which misconstrues our meaning entirely. The extract referred to, as it appeared in this paper, read; "Nothing, we think, would benefit the lumber trade *of* Canada so much as the passage of a commercial union measure". Our contemporary, by substituting the letter "r" for an "f" makes the sentence read: "The lumber trade *or* Canada". Now while we are strongly of the opinion that the lumber trade of this country would be benefitted by C. U. we do *not* think that Canada, as a whole, would benefit by such a change. A single letter sometimes when used in the wrong place causes a serious blunder.

FROM our exchanges we learn that the American lumber trade while not very active, presents a satisfactory outlook for the future. In most of the Western markets stocks of lumber in pile have been considerably reduced. In the East the late warm weather has stimulated building operations, and it is believed that the consumption of lumber in this way will equal and perhaps surpass the record of previous years. Manufacturing has begun in a lively manner, although in some places high water has interfered with the operation of the mills. It is probable that railroad building will be carried on this year on an extensive scale, and thus afford an outlet for a large amount of lumber. Generally speaking the condition of the trade may be characterized as healthy and encouraging.

THE very important question of an international exhibition for Canada is now under discussion, and is evidently meeting with favor from all classes of the Canadian people. The Dominion in the past has always proved one of the foremost participants in events of this kind, and native products and manufactures have been exhibited with the greatest success throughout Europe and the United States. Several such enterprises have been conducted in Australia with the most gratifying results, and there is no reason why Canada, possessing as she does a location so much more central and accessible in every respect, should not enter upon a similar project under infinitely brighter auspices. The more the idea is looked into the greater seems the cause for surprise that an effort has not been formulated at a much earlier date. An exposition, lasting for several months, could hardly fail to attract thousands of visitors to our shores, and the practical knowledge of the country thus disseminated would perform more good in one day than all the emigration literature ever published. Mr. Stevenson, secretary of the permanent exhibition in Quebec, who has been associated with all the Dominion exhibits in other lands, is one of the foremost advocates of the scheme, and he suggests that the summer of 1892 would be the most appropriate time for such an enterprise, as it would prove the 250th anniversary of the founding of Montreal—where such an event would in all probability take place—and the 400th anniversary of the discovery of America. This at first sight may seem a somewhat lengthy period to look forward to, but enterprises such as this require plenty of time to mature and become published abroad, and when the enormous duties and responsibilities associated therewith are taken into consideration, it will become generally recognized that the present is none too early a date to commence the agitation. Once the country and the several Governments take the matter in hand there need not be the slightest fear as to an ultimate and unbounded success.

SENATOR CLEMOW is bringing up two very important matters in the Senate, in asking for information regarding the allotment of water-power at the Chaudiere, and the deposit of sawdust in the Ottawa from the saw mills there. The impression seems to prevail that the water power at the Chaudiere is not utilized to a reasonable extent for manufacturing purposes, as its availibility seems quite limited. At the present time there are six or seven saw mills and a flour mill run by the Chaudiere power. The Ottawa is the only river into which lumber mills are allowed to discharge sawdust, but there is no other river which has such enormous lumber interests on its banks, and the Government has so far permitted the sawdust nuisance out of deference to the great interests concerned. If the report of the Government engineers who were sent out last year to examine the effects of the sawdust on river interests should take the view that the nuisance is not a very serious one, the public, it is said, will be content to let the matter go.

THE recent investigation by the Department of Public Works relative to the sawdust nuisance in the Ottawa river, has resulted in the discovery that the refuse is blocking up the river to such an extent that the channel is in many places gradually filling up, rendering navigation uncertain and perilous. Sawdust islands are forming, the rufuse already fills the principal bays, and a stretch of sawdust extends about all the way from the Chaudiere Falls to Grenville, sixty miles below the City of Ottawa. Mr. Henry A. Gray, assistant chief engineer, who was appointed by the Government to make investigations, reports that the river is in a clogged condition between a point below the Chaudiere to the mouth of the Gatineau, a distance of two and a-half miles. Surveys of this portion of the Ottawa were made in the years 1857, 1858 and 1874. The soundings taken by Mr. Gray enabled him to observe the marvellous growth of sawdust deposits in the river during the past thirty years. Sawdust fills the bed of the river below the island, opposite Parliament Hill, and at one point in the middle shows a depth of forty feet. The same state of affairs seems to exist, to a greater or less extent, for many miles. Some idea of the sawdust deposits can be gained when it is learned from official figures that last year's cut at the Chaudiere aggregated 365 million feet board measurement. This return is said to be some fifteen per cent. under the amount of previous years. It is estimated that at least ⅛ of the amount of material is cut in sawdust. Now taking the whole figures this cut equals 4,380,000,000 cubic inches equal to 2,534,722 cubic feet or 93,578 cubic yards, allowing that more is cut from the log than returned, and also that the above return is 15 per cent. under the amount of former years, there is at least 100,000 cubic yards of sawdust alone deposited into the Ottawa river every year from the Chaudiere mills in the process of cutting up the logs. The above is only sawdust. To this may be added slabs and edgings. Much of the slab wood is broken up by "hogging machines" and this increases

its damaging effect upon navigation. This operation causing it to be the sooner water-logged and consequently to sink. If the stuff was allowed to go into the river as slabs it would be picked up for firewood, now it is useless and sinks to the bottom, forming with the other materials a mattress, which in course of time cannot be broken up or lifted by dredging.

THE Chaudiere lumbermen, says the Ottawa *Journal*, are up in arms over the proceedings of the sawdust committee. They held a private meeting and decided to lay their views on the matter before the public. A deputation of lumbermen, headed by Messrs. J. R. Booth, and Ald. Henderson representing Messrs. James McLaren & Co., waited on Sir Hector Langevin, Minister of Public Works, on the subject. What transpired all parties declined.to say, but it is said that Sir Hector was informed that the channel of the Ottawa was not affected by sawdust deposits, that the prohibition by the Government of the use of the river as a dumping facility would probably force some of the lumbermen to remove from the Chaudiere, as the facilities there for disposing of refuse by burning were anything but satisfactory.

NOTWITHSTANDING a determined opposition the Upper Ottawa Improvement Company succeeded in securing an extension of their charter during the session of Parliament just closed. This company is composed of the leading saw mill men of the Ottawa Valley, and it evidently does not enjoy the good-will of outside lumbermen, who claim that extending the charter was simply taking from the Government the control of a great natural highway, and handing it over to a monopoly. The company also applied to the Government to purchase the Cheneaux boom, through which all the saw logs above the Calumet, some sixty miles above Ottawa, have to pass, and which was originally built by the Government ; but so determined was the opposition to the bill that the minister of public works declared in committee that the Government had no intention to sell or otherwise dispose of any of the government works to any company. This declaration caused a quietus to another scheme which was under way. The government has made extensive improvements, slides, dams, booms, etc., on the Madawaska river, one of the largest tributaries of the Ottawa, which have cost upwards of a quarter million dollars. Finding that the government would not extend the works sufficiently far up the stream to guarantee the sure driving of the river from the higher limits, a company was recently organized to construct the necessary works, for which purpose a charter was secured from the Ontario Government, and last winter considerable money was expended on the work. Owing it is said to the economical manner in which the Upper Ottawa Improvement Company handle the logs on the Ottawa. The new Madawaska company considered that if they could purchase the government works, and by this means obtain the control of the stream, they could handle the logs and timber to greater advantage and at a much smaller cost than the 4⅓ cents per log now charged by the government for the use of their works. This scheme failed to mature, however, through the opposition of lumberman who, although invited to do so, refused to take stock in the company, and the declaration of the Minister of Public Works was stated above.

THE British Consul at Vera Cruz, in Mexico, Mr. Gordon, speaks in his official report of portable wooden houses as a profitable article of import. Though there is a high tariff in Mexico, ready made houses of wood or iron are so much required that they are admitted free of duty. The wooden houses are, however, far preferable to those of iron on account of the heat of the climate. So great is the present difficulty in obtaining what is wanted in this respect that we are told one may often see well-to-do and decently dressed artisans and peasants living in rough board houses, or huts constructed of rafters and sugar-cane. Evidently they would be glad of something a little better. Mr. Gordon says the houses best adapted for supplying this great want would seem to be two-roomed dwellings with spacious porticos and overhanging caves and roofs high enough at the ridge to give adequate ventilation. All the parts should be so constructed as to be easily put together, and easily carried to the selected site either by rail or by road, the windows not too large, and fitted flush into the panels so as to be easy of transport and safe without much packing. Mr. Gordon says that the roof is a difficulty, as owing to the great heat of the sun corrugated iron is found to be too hot, while unprotected wood is apt to warp and shrink, but he suggests that a wooden roof might be thatched, the material being cheap, if so constructed as to render thatching easy while maintaining a decent appearance on the inside. Another suggestion he makes is that it would be a great advantage if the wood employed could be impregnated with some chemical making it capable of resisting water, fire and vermin without increasing too heavily the cost of the house. This may be considered authoritative and trustworthy information, being embodied as it is in the official report of a gentleman in Mr. Gordon's responsible position. But it is not only in Mexico that these ready-made houses are required. There would also be a demand for them in some parts of South America and no doubt in some of the West Indian Islands. Once well introduced and carefully adapted to the local requirements an extensive and profitable business might soon spring up. One of our young lumbermen with a taste for travel and some aptitude for designing might do worse than take his holiday in the south this year and see for himself just what is required, also learning at the same time what there is in it. Perhaps in Canada we are a little slack about manufacturing to the most profitable stage, being content to ship the roughest goods and leaving to others the greater profit of further manipulation. In the matter of these ready-made wooden houses Canada ought to be able to compete with advantage against any other country.

LUMBERMEN'S WAGES IN NEW BRUNSWICK.

Five members of the Dominion Labor Commission visited Chatham, N.B., recently and examined several witnesses. We extract the following from a local paper, having special reference to the lumber trade.

Ernest Hutchinson, am in the lumber business ; employ about 85 or 90 men and boys in the manufacture of deals, shingles, box shooks, etc. ; gangmen are paid $1.50 to $1.75 ; tailmen, $1.30 to $1.40 ; patent edger men, $1.50 ; lath sawyers, one man, $2 and others lower ; bedmen, $1.20 ; surveyors, $1.50. Pay of log scalers at the booms is regulated by law, but I think they get 10c. to 15c. per M. The buyer pays the scaling fee. Our men are employed from 6 to 7 months a year at the mill and I employ some of them all winter ; some of them go to the woods, where they get from $14 to $18 a month and found. Our millmen are paid every two weeks. In the woods they are paid as they require pay, and balance, if any is due, at end of season. Perhaps half of the laboring men of Douglastown, where I live, own their dwellings. I do not think wages have increased of late ; rather decreased ; 10 hours comprise a day's work. Lumber manufacture has decreased here of late. I think this is due to decrease of price. I don't think the high stumpage has anything to do with the depression of the lumber trade. The decline of shipments has been very marked during the last few years. They amounted to 150 millions feet in 1877, 155 millions in 1880, 149 millions in 1883, 87 millions in 1885, 72 millions in 1886, and 68 millions in 1887. The decrease is on account of the limited demand. What affects other parts of the country in the lumber trade affects us. Money was made here some years ago in the lumber trade.

Theophilus Desbrisay, foreman in Mr. Snowball's business ; we have between three and four hundred men employed ; about three quarters of them live in Chatham ; gangmen (head) get from $1.50 to $1.60 ; tailmen, $1.30 and $1.10 ; head circular men, $1.40 to $1.50 ; bedmen, $1.10 and $1.20 and $1.00 ; filers, $2 ; engineers, $2 to $2.50 ; lathmen (highest) $1.30 ; we make palings, chiefly, rather than laths. The men work 10 hours a day. We work day and night for part of the season. Some of the men go to the woods in the winter and some fishing. Shipmen (outside) get $1.20 to $1.40. Stevedors (inside) $2.00. The price for loading is about $1.25 per standard ; some vessels are loaded for $1 a standard because it is a part of their charter. The vessels are principally loaded from the wharf in Chatham. Steam is used sometimes in loading. We pay our men once a fortnight ; some families get advances in the form of orders on the store. If anything is coming to the men on pay day they get it in cash if they want it. The orders given are in the way of an accommodation for those who wish to anticipate their wages. We start at half past six for night work and run to 6 a.m.—working 10 hours.

A PROGRESSIVE COMPANY.

The Rathbun Company, says a Brockville paper, have been making extensive improvements in their premises on William street. The large planing mill and sash and blind factory has been further enlarged by an addition 25 by 102 feet and several large sheds have been built. These sheds, which enclose two sides of the property, are in all 300 feet in length with a storage capacity of 250,000 feet of lumber. Thus all dressed lumber is kept under cover. Wagons can drive through the mill, through the yard and all the sheds without leaving the plank roadway. On the William street part of the property a fine two storey office, 22x40, has recently been built, the interior arrangements of which are very convenient and handsome. A very handsome counter with wire railing divides the main room and part of the front is taken up by the manager's private office. The finish is ash and cherry, giving a very pleasent effect. The mill itself is splendidly equipped, both as a planing mill and sash and blind factory. The dry kiln is one of the best in the country and with some of the latest scientific arrangements as to carrying off the moist air not usually found. A side track of the C. P. R. is being constructed through the large yards on the east side of William street, where a very heavy stock of lumber and bill timber is kept. Altogether the capacity and equipments of the Rathbun Co.'s Brockville branch is excelled by few if any similar establishments in the country.

The company has been fortunate in the selection of its staff. Mr. V. R. Marshall, of the late firm of Kearns & Marshall, is the agent in charge and no more able, honorable or popular man could be found to fill the position. Mr. R. C. Calhoun, in charge of the office, has been only about a year in Brockville but he has already established an enviable reputation. The shipping and yard is in the charge of Mr. Sam. J. Geash, who occupied the same position with Kearns & Marshall, and who is well and favorably known to our citizens. The factory is managed by Mr. Fred. Kearns, who though a comparatively young man, has already a good standing as a thorough business man. The business done here is a very large one. Besides the wholesale trade in car lots several teams are kept busy delivering goods in town.

AMONG THE MANUFACTURERS.

We understand the Canadian Rubber Company through their Toronto agent, Mr. J. H. Walker, have secured the contract to supply Messrs. Gooderham & Worts with all the belting necessary for their large new elevator now nearing completion in Toronto.

We are in receipt of a copy of a new 16-page Sectional catalogue of B. F. Sturtevant's Steel Pressure Blowers, which illustrates these well known machines with all their latest improvements. Mr. Sturtevant's catalogues have always been celebrated for the valuable tables relating to the properties of air in motion, and in this are to be found a number which render this catalogue of great utility to foundrymen, blacksmiths and iron workers of all classes. A copy will be mailed upon application to B. F. Sturtevant, Boston, Mass. Ask for catalogue 33.

The late shipment of belting to the Lake of the Woods Milling Company's new mill in Manitoba, is perhaps the most extensive ever turned out in Canada for a single concern. The well-known manufacturers, Messrs. Robin & Sadler, of Montreal and Toronto, filled the order throughout and in accordance with their usual custom have given entire satisfaction. Included in the shipments were about 7,000 feet of all sizes, ranging from two inches to two feet in width. One piece was a double leather driving belt 24 inches wide, and 360 feet long, weighing about 1,400 pounds.

The Hart Emery Wheel Co., limited, of Hamilton, report business very brisk, their sales this year so far, exceeding those of the same period in any year since they started. The demand for the Hart Wheel is steadily on the increase. A strong wheel—quick, cool, cutting and durable — it is a great favorite amongst lumbermen. They advertise this month a line of saw-filers that is attracting the attention of saw mill men. The Rogers' filer, made in three sizes, takes the place of files on the one hand and of the large expensive automatic saw filer on the other. So far they have not been able to keep up to the demand, but they are increasing there facilities and will soon be in a position to largely increase their output.

NEWS NOTES.

—The new pulp mill at Ottawa is expected to commence operation about June 1st.

—The Emery Lumber Co., of Parry Sound, recently lost several dwelling houses by fire.

—Andrew Boudreau has commenced operations on his new sash and door factory, at Chatham, N. B.

—The Vancouver B. C. *Herald* says :—In the boom of logs which the Beaver brought in on Friday were two logs of immense size. One was 100 feet long, 4 ft. 9 ins. in diameter at the small end and 9 feet at the big end. Another log 24 ft. long has been cut from the same tree, and like the former was entirly free from knots or flaws. The tree contained 18,000 feet and weighs 40 tons. Two "hand" loggers felled this giant of the woods after which it was taken to the water's edge by means of jack screws.

—The shingle mill of W. P. Christie, of Severn Bridge, was totally destroyed by fire, on the 12th May. The mill was only newly built, and fitted with the latest requisite machinery. The fire originated in the engine-room, when all the employees were away to dinner, with the exception of the foreman, who was busy filing the saws, and did not observe the fire until it was beyond control. Although every possible assistance was rendered, in twenty minutes the structure was a smoking ruin. Mr. Christie intends to rebuild at once, and has the most of the building material on the grounds, and the carpenters busy framing a new and larger mill.

—Alfred McGrath, while working in Laurent LeBranc's saw mill at Chockfish, near Buckingham, had his right hand cut off by a circular saw.

—Mr. D. E. Sprague is rebuilding his planing mill, in Manitoba, that was recently removed to make way for a building of the Northwest Navigation Company.

—Mr. Walter Beatty, of Pembroke, who had his planing mill destroyed by fire last October, has just completed the erection of a new and larger edifice, fully equipped with the best wood-working machinery. He will commence active operations again shortly.

—The St. Lawrence Lumber company has been registered in London to carry on in Canada and Liverpool, the business of timber merchants and dealers, with a capital of £50,000. Kennedy Burns, of Bathurst, is a director.

—Chas. R. Palmer, with a crew of nearly 100 men, is at work upon his drive of 7,000,000 on the west branch of the Meduxnekeag, N. B. W. H. & J. Rourke's drive, containing three and a half millions has arrived at St. Martins.

—The Lindsay *Post* says that Mr. John Dovey had a narrow escape from death whilst looking after some of his logs at Kinmount. The logs were being run through the slide at that point and in some way Mr. Dovey lost his footing and was precipitated into the water and was carried over the chute amongst the logs. He was under the surface for a considerable time, and the spectators even lost all hopes of seeing him again, when a log running underneath him ran to the top, and he was pulled out insensible. A doctor was summoned and after considerable labor he was revived but was unable to stand the journey home until Tuesday. He is improving slowly. The old adage that "misfortunes never come single" has been amply verified in Mr. Dovey's case. On Wednesday, the day after he was conveyed home from Kinmount, his son George, aged about 21, who works in his father's mill here and who had last October several fingers of his left hand cut off at the second joint by coming in contact with a saw, again met with a similar accident to the hand, this time amputating the four fingers clean. A mitt, worn on account of the fingers still being tender, caught the jointing saw and drew his hand in.

—We learn that some large rubber belts, ranging in width from 20 to 48 inches, five, six and seven ply thick, one of them weighing six tons, have recently been supplied to elevators in different parts of Canada by the Canadian Rubber Company, of Montreal and Toronto.

The following letter speaks for itself:

ROCKLAND, ONT., May 29th, 1888.

The Wm. Hamilton Mfg. Co., Peterboro', Ont.

DEAR SIRS:—We will say this that unless we are very much mistaken you have built us a Band Mill that will do you credit. So far it has gone right on cutting up whatever comes along, rough logs or smooth, without any hitch or delay of any kind. How long would it take to get up another shingle machine if wanted? Yours truly, (Signed) W. C. EDWARDS & Co.

The above was an Allington Band Mill.

Railway Construction.

The prospectus of the Ontario, Manitoba & Western gives an estimate of $25,000 a mile for the whole 580 miles of road, or about $15,000,000 for the whole. The road will run through an exceedingly rich agricultural, mineral and timber region.

A private despatch from Minneapolis says, on the authority of Mr. Pillsbury, that one thousand shares more than the controlling interest in the "Soo" road has been sold to officials of the C. P. R.

MACHINERY FOR SALE

JOSEPH HALL MACHINE WORKS, OSHAWA

Circular Saw Tables; Wood Turning Lathes; Morticing Machines.
Car Morticing Machine; Wood Benches; Wood Shapers.
Large Surface and General Purpose Wood Planing Machines.
Graining Machines; Tenoning Machine; Sand Belt Machine.
Swing Sawing Machine. Testing Machines for Threshing Machines.
Horizontal Boring Machines; Upright Boring Machines; Facing Machines.
Iron Turning Lathes; Iron Column Drilling Machines.
Iron Punching Machine; Punching and Shearing Machine.
Key Seat Cutting Machines; Cutting and Shearing Machines.
22 Spindle Gang Drilling Machine; Power Shears.
Large Iron Shaper, English Make; Milling Machine.
Schlenker Patent Bolt Cutting Machine.
No. 6 Northey Steam Pump; Large Heavy Tumbling Barrels.
Steam Heater, 51x72 inches.
Bradley Cushioned Trip Hammer; Iron Boring Lathe.
Foundry 3 Legged Drop, 35 feet High 1,100 pound Drop, 37 inch Gear Wheel.
Steel Boiler, 68x168 inches.
Horizontal Engine, Cylinder 18x36.
Turret Head, Brown & Sharpe, Mill Screw Machine.
Leffel Water Wheels; Portable Engines.
Fairbank's Platform Scales; Steam Pipe and Fittings.
Fire Extinguishers; Sand Blast for sharpening and cleaning Files.
Belting, Shafting, Hangers, Pulleys, Couplings.
Wrought Iron Heater for Glue and Wood; Circular saws.

JOSEPH HALL MACHINE WORKS,
OSHAWA.
JOHN LIVINGSTONE, Trustee.

H. W. PETRIE'S list of Sawmill and general Wood-working Machinery, for quick delivery.

ONE new 2 or 3 block sawmill with 61-inch saw.
ONE sawmill with timber limit, in Parry Sound.
ONE 2-block mill, small portable size.
ONE automatic sawing machine, Bayley make.
ONE 66-inch inserted and one 64-inch solid saws.
TWO stave cutters with parts.
ONE gang lath mill, new.
ONE Waterous self-feed lath mill and bolter.
ONE Goldie & McCulloch Hall self-acting shingle machine.
ONE self acting shingle machine, Green Bros.' make.
ONE Waterous self-acting shingle mill and jointer.
ONE Eureka self-acting shingle machine and jointer, I. Frenchette, maker, St. Hyacinthe, P.Q.
TWO Doherty hand swing machines.
ONE upright swing with 40-inch saw.
EIGHT wheel jointers, various makers
THREE drag saw machines.
ONE 24-inch planer and matcher, Rogers' make.
ONE new eclipse planer matcher and moulder, Galt make.
ONE 24-inch planer and matcher, Picton make.
TWENTY-INCH planer and matcher.
EIGHTEEN-INCH planer and matcher.
LITTLE Giant poney planer and matcher.
NEW Economist 24-inch planer and matcher.
ONE 27-inch revolving bed double surfacer. Galt make.
ONE 24-inch surfacer, McKechnie & Bertram.
ONE 24-inch poney planer, Frank & Co. builders.
ONE 20-inch poney planer, Frank & Co. builders.
TWENTY-FOUR-INCH surfacer, Kennedy make.
TWENTY-FOUR-INCH surfacer, hardwood bed.
TWENTY-TWO-INCH surfacer, wood bed.
EIGHTEEN-INCH surfacer, all iron and steel.
SIXTEEN-INCH buzz planer, Galt make.
THREE-SIDE moulder, all brass heads, Rogers' make.
THREE-SIDE moulder No. 2 Cant Gourlay make
TWO one-side moulders, McKechnie & Bertram make.
ONE one-side moulder, wood frame.
NEW 2-side moulder, Cant Bros.' make, Galt.
TENONING machine, double cope, Goldie & McCulloch.
ONE J. A. Fay tenoner, small size.
TWO Ross tenoners.
ONE double cope tenoner, McKechnie & Bertram.
BLIND slat tenoner, Cowan build.
POWER morticer, Goldie & McCulloch make.
TWO power morticers for heavy work.
LARGE stock of foot morticers, new, at $15 each.
UPRIGHT boring machine with column.
SIX power scroll saws, various makes.
ONE 34-inch band saw, Hamilton Tool Co.
TWO new band saws, Galt make.
NEW 34-inch pedestal and 24-inch bracket band saw.
ONE upright Goldie & McCulloch shaper.
NEW iron top shaper, Cowan make.
SHARPER, heavy iron column, Cant Bros.' make Galt.
ONE wood frame shaper and counter shaft.
ONE velocipede foot power shaper, Barnes.
ONE automatic handle lathe, Sheldon Bros.
ONE handle or gauge lathe, Bailey.
ONE axe handle or spoke lathe, new.
ONE Blanchard spoke lathe, Fay make.
ONE broom handle lathe, wood frame.
NEW wood splitting machine Send for photo.
BOBBIN lathe with cutters for cotton and woolen mills.
ONE iron bowl machine, American make.
SET of hoop machines, Goderich make.
SET match machinery for round matches.
LOT of lumber and log cars for sawmill use.
FOUR pole road cars, 7 feet 10 inches gauge.
SANDPAPERER, new, Galt make.
FOOT mitering machine, Cant Bros.' make.
ONE choir mortising and boring machine.
ONE set spoke machines, Fay make, Cincinnatti.
ONE knife grinder, Galt make.
SIX saw benches, cut off and ripping.
ONE hand wiring machine
TWO new wood turning lathes with rests, etc.
ONE beading and moulding attachment for planer and matcher.
LOT of moulding and matcher cutter heads.
SEND for list 13 and 14 and mention wants.

Address H. W. PETRIE, Brantford, Ont.

RARE BARGAINS
—IN—
MACHINERY

1 Yankee Gang and Slabber.
1 Circular Rig to cut 45 feet.
3 Large Log Dogs and Steam Canter.
1 Double Edger.
1 Slash Table.
2 Siding Saws.
1 Sett Butters.
1 Lath Machine.
1 Emery Trimmer.
1 Press Punch.
1 Filing Table and Saw Anvil.
7 Large Circular Saws.
16 Small Circular Saws.
56 Gang Saws.
2 Mulay Saws.
1 Pony Planer.
1 Shaper.
1 Swing Saw.
1 Rip Saw.
1 Matcher.
Belting, Shafting, Tools, etc.
1 Fifty-Horse Power Waterous Engine and 3 Boilers.
1 Twenty-Horse Power Waterous Engine and Boiler.
1 Four-Horse Power Engine and Boiler.
1 Seventy-five-Horse Power Marine Engine and Boiler.
1 No. 2 Heavy Circular Saw Mill with Prescott's Direct Acting Steam Feed to cut 30 feet.
1 No. 2 Heavy Circular Saw Mill, to cut 20 feet. (Rope or Steam Feed).

We have received instructions to close out the above Machinery, all of which is in good running order, without reserve, To any one building a Mill this is a rare chance.

SEND FOR PRICES

NOTICE.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Supplies," will be received at this office until noon on THURSDAY, the 28th inst., for delivery of supplies required for the year ending with June, 1889, viz.: Groceries, Ammunition, Twine, Oats & Flour, Blankets, Clothing, &c., required at various points in Manitoba, the North-West Territories, and British Columbia.

Forms of tender, containing full information relative to the Supplies required, the quantities, &c., may be had on application at this office, or at the Indian Office, Winnipeg, Man.

Parties may tender for the supplies required at any one of the above-mentioned points separately. Samples of the articles required to be delivered under the Contract, Schedules, and the Regulations governing the Contract, may be seen at the Indian Office, Winnipeg, Man., where tenders will be received. The Department does not bind itself to accept the lowest or any tender.

Each tender must be accompanied by a certified cheque on a chartered bank, for the sum of One hundred dollars, which will be returned to the party tendering if his tender is not accepted. If the party tendering declines entering into a contract when called upon to do so, or fails to complete the work contracted for, the amount of his cheque will be forfeited to the Crown as liquidated and ascertained damages for such neglect or refusal; but if he completes the contract in a satisfactory manner, the cheque will be returned to him after the expiration of the contract.

The lowest or any tender will not necessarily be accepted.

This advertisement must not be inserted in any newspaper without the authority of the Secretary. Printers inserting it without such authority will not be paid for the same.

L. VANKOUGHNET,
Deputy of the Superintendent General of Indian Affairs.

Department of Indian Affairs,
Ottawa, May, 1888.

THE NEWS.

ONTARIO.

—17,000 railway ties await shipment at Stayner.

—Waubaushene mills run ten and a half hours a day.

—F. Baechler, saw mill, Ben Miller, is offering to compromise.

—An addition of 200 feet is being put to the mill wharf, Waubaushene.

—The demand for band saws at the present time seems to be increasing.

—A new saw mill is to be built at the head of Kempenfeldt Bay, Lake Simcoe.

—The Rathbun Company have made great improvements in their docks at Rossmore.

—Peters & Cairn's mill at Midland is expected to cut 4,000,000 feet during the season.

—Mr. W. C. Harrison, Norwood, is putting a 50x15 foot addition to his sash factory.

—William Ellis had two fingers cut off in Shire's mill, Bracebridge, a few days ago.

—Bronson & Weston, of Ottawa, have placed a band saw in their mill at the Chaudiere.

—C. Young, of Young's Point, has increased the capacity of his shingle mill to 25,000 daily.

—Large shipments of lumber from Parry Sound to Oswego, N.Y., are being made this spring.

—Mr. John Shaw, of Forest, has disposed of his retail lumber business to his son, Fred W. Shaw.

—Extensive alterations and additions are being made to Mr. W. Sparling's planing mill, at Pembroke.

—All the mills at the Chaudiere are running full time day watches, but as yet no night work is being done.

—The Rathbun Co., of Deseronto, have purchased Thompson & Avery's cut of ash lumber of over 300,000 feet.

—Mr. Singleton Brown's new shingle mill at Bracebridge is running and has the prospect of a prosperous season.

—A young man named Fox had all the fingers of one of his hands cut off by a saw in the Gilmour lath mill, Trenton.

—The Rathbun Co., are driving briskly over the Scott limits. They have over 20,000 logs coming down a new and improved stream.

—A Hamilton firm is about to erect a mill at Falkenburg this summer. The firm will buy and ship cordwood, stove wood and tanbark.

—The sawmill of Messrs. Troup Bros., at Sherkston, near Welland, was destroyed by fire April 21. Messrs. Troup will rebuild immediately.

—Mr. Wm. Parker, of Stevenson, has taken out a million feet of logs this winter. They will be manufactured at his mill in that township.

—Mr. John Munro and his staff are busy at work on the new planing mill, at Midland. It is expected to be ready about the end of May.

—Casey Bros., a planing mill firm, of Hamilton, have made an assignment for the benefit of their creditors. Liabilities about $8,000; assets, $3,500.

—The Rathbun Company, of Deseronto, have now three thousand men in their employ. This will give some idea of the magnitude of their operations.

—Vigars Bros., of Port Arthur, have doubled the capacity of their mill by the addition of new machinery. They will cut about 3,000,000 feet this season.

—The Dickson Company, of Peterborough, have purchased from Mr. D. Ullyott the balance of his interest in the pine timber limits of the township of Anson.

—H. Sherman, aged seventy-eight, died at Windsor. He was a wealthy lumberman and cheese manufacturer. One of his sons is professor of mathematics at Dartmouth college.

—Ottawa builders say that lumber of all kinds has risen $1.50 a thousand feet, caused no doubt to some extent by the large amount of building that is being done at the capital this year.

—The Blind River Lumber Company has made a great improvement in their mill this spring and now have it running and intend doing a large business this season in lumber, lath and shingles.

—A. & P. White, of Pembroke and Deux Riviere, have taken out a full supply of logs and dimension timber this season and are now busily cutting. They anticipate a brisk season's business.

—John Ashcroft's cabinet factory at Wiarton was burned May 16th. The fire started in the drying kiln. Loss $5,000; insured. The small G. T. R. hand engine did good service, saving the adjoining property.

—A drive of logs, consisting of 300,000 pieces, is now on its way down the Trent river. It is said to be as large as any one drive that has ever run over these waters, and will take two or three weeks to pass any given point.

—Mr. A. M. Dodge, of New York, President of the Georgian Bay Consolidated Lumber Company, has made extensive improvements to his summer residence at Waubaushene, and will reside there for some months.

—Messrs. Hurdman & Co., of Ottawa, have commenced running their new circular saw mill. The firm expect that the little mill will get through a large amount of light work, leaving the gang saw free for heavy cutting.

—Mr. John Church has sold his saw-mill at West Point to the Neebing Lumber Co., who will take it to the neighborhood of Fort William. The company is composed of Messrs. McCuaig, Low, Carter, Richards, Lingham and others.

—Messrs. John Craigie & Son have opened up a box factory and planing mill at Penetanguishene, Ont. They will manufacture upwards of a million feet of lumber in their factory this season, and will give employment to about ten men.

—The Messrs. Brown Bros., Toronto, have sold all their standing pine and oak timber at Limehouse station, near Acton and Georgetown, to Messrs. Taylor Bros., of Toronto, who have erected a steam saw mill, and work will be proceeded with at once.

—Ice fourteen inches thick and covering an extent of 1,500 feet on the Ottawa river at Hull, was thrown high up in the air with a terrific report the other night. Gas generated in sawdust beds at the bottom of the stream is supposed to have caused the explosion.

—The pumping and engine house, the property of the Collingwood Dry Dock and Ship Yard Company, situated at the dry dock, was totally destroyed by fire May 17th. Loss, probably $1,500; insured for $600 in the Royal, $300 in the Royal Canadian.

—Belleville dealers will this year bring from Ottawa upwards of one million feet of lumber. In the past this city has been considered an important lumber manufacturing point, but the quality of the cut has of late years deteriorated very greatly and the best lumber is all bought for the United States market.

—Messrs. White & Son, proprietors of the flour and sawmills at Orwell, met with a serious loss some days ago when, without warning, the saw-mill dam gave way, and half a million feet of logs and twenty thousand feet of lumber were swept into the lower dam, which also gave way. The loss is estimated at $20,000.

—The *Intelligencer* says that all the saw logs of last year's drive are now below the lower bridge at Belleville and will be passed through the boom by Saturday. The first of this year's logs will reach Belleville in ten days, as the first of them have passed Stoco Lake and the tail is below High Falls. The water in the Moira is keeping up satisfactory.

—Messrs. H. L. Lovering & Co. have been making large cutting records in their saw mill at Coldwater this spring. Last winter the mill was thoroughly refitted, the machinery being in a large measure replaced by new, and several improvements made by which the mill will now cut more lumber for the number of hands employed than any small mill in the district.

—The shrill note of the steam whistle, and the hum of the buzz saw are now heard in the land, and everywhere signs of the season's busiest operations present themselves. The roll of the truck, the voice of the dockwholloper, the familiar tread of the lumber gang, and various other signs of activity fall on the ear, and all betoken the sway of spring. So says the Penetang. *Herald.*

—The Canada Atlantic railway is making a bid for the lumber carrying trade from Ottawa to New York. They offer to carry it to the latter city for $35 a car, or about fifty cents a thousand feet less than boat rates. This, it is said, will not affect forwarders very much this season, as they have had their contracts made some time ago, but the business of American boat orders will suffer.

—The demand for good, clean square timber seems unusually keen this season. Agents of buyers have been everywhere in the woods viewing the timber on the rollways, and many sales have been made. Indeed it is rumored in well posted circles that of the entire cut of the Upper Ottawa only a couple of lots remain unsold. Figures are not obtainable, but they will doubtless soon leak out.

—Application for letters-patent is made by the Western Lumber company, limited, capital $300,000, for the purchase of timber, limits and real estate of every description, and the manufacture of timber into logs and of articles to be made into firewood, etc. The operations of the company are to be carried on in Ontario, Manitoba and the Northwest Territories. The chief place of business is Toronto.

—The Maganetawan river, at Burk's Falls, has overflowed and risen to the highest mark attained for years. Wood and lumber piles have been thrown down, houses floating turned over or floated off. The old hull of the "Ada," thought to be high and dry, was carried by the current down the river. A family living near the river have been compelled to remove to the second storey, and get to and from by boat.

—Hardly a week passes by without one or more accidents occurring in one or other of the large mills at Deseronto. In one issue of the local paper of that town we are told that one man was struck in the stomach by a knot hurled from a saw and severely bruised; another, while removing a piece of wood stuck a tie-hook through his great toe; one had three fingers of one hand cut by a jointer in the cedar mill; another had his fingers jambed between the couplings of two cedar cars; and still another had the heel of his boot caught in a piece of machinery, and but for timely assistance he would have been torn to pieces. The people of Deseronto had better get an ambulance wagon and a hospital right away.

—A correspondent writing from French River, says: The Victoria Harbor Lumber Coy's and McLean Bros'. drives are down. One of the Ontario Lumber Coy's drives, in charge of J. Brennan, which was hung up last season, is reported to be in safe water, and all the other drives likewise. Tugs have been running on the French for the past two weeks and rafting is already begun. There is every indication of a busy season here, as both the large mills have been refitted and enlarged, and will commence cutting in a few days. There is also a large fleet of fishing boats now stationed here. Shipping has already commenced and the American steamer "Remora" arrived to-day with a full list of passengers.

—Many people in the District of Nipissing, says a local paper, are enquiring why the proceeds of the recent sale of timber berths should not be, at least to some extent, expended in subsidizing the North Bay and James' Bay Railway. They think that the expenditure connected with the opening up of this new territory is a legitimate claim on the proceeds of such sales. The sums appropriated for roads and bridges in this District by the Provincial Government recently, are proper outlays in this direction, but the amounts granted are insignificant in comparison with the income which the Provincial Treasury receives from the sale of our pine timber. Nipissing calls for a subsidy for the North Bay and James' Bay railway, and its people will press the claim.

—Large quantities of spruce timber in blocks four feet long and not less than six inches thick, are being shipped by the Northern railway from Trout Creek station to the paper mills of Ontario, where it will be reduced to pulp and mixed with cotton fibre in the manufacture of paper. The *Nipissing Times* suggests that the people of that district should enquire how far they can utilize their spruce and poplar woods for this purpose. There may be money in this thing. Another important industry has arisen in this vicinity since the completion of the Northern railway. Hardwood lumber, birch and maple chiefly, is being shipped from the south side of the lake by the car load to Winnipeg, for the manufacture of furniture, and satisfactory returns are being realized.

—The total cost of construction of slides and other works to facilitate the descent of timber and sawlogs on the Ottawa river and its tributaries, up to the 30th of June last, has been close on a million dollars, as shown by a return submitted to the House, the figures for each being as follows:

Ottawa River	$370,002
[illegible]	67,077
Madawaska	104,573
[illegible]	[illegible]
[illegible]	[illegible]
Petewawa	77,000
Riviere des Prairies	13[illegible]
South Nation	1,188
General expenditure	232,459
Total	$942,257

Of this amount, $719,247 was expended prior to confederation.

QUEBEC.

—A new saw mill is being erected at Sawyerville.

—Lumbering operations will be brisk at Buckingham this year, nearly all the mills having already commenced sawing.

—A dynamite explosion in the logging camp of King Bros., at St. Pascome, county L'Islet, is reported. Sixteen men are reported as badly injured.

—We learn that several sales have been made by Quebec shippers to London importers, 3rd and 4th quality, chiefly the latter. Prices are understood to be about the same as last year.

—The Quebec Timber Company's accounts are said to show a debit to profit and loss at the close of last year of £7,706:

the balance of loss from 1886 to 1887 brought out in the revenue accounts in £314.

—Mr. J. Fish, Lachute, has sold his grist mills to Mr. Peter Campbell for $20,000, and his sawmills to Mr. John Campbell for $8,000. There is talk of two sawmills being built at Lachute the coming summer.

—Messrs. Mercier & Dudley, of Lake Megantic, have shut down on birch, as they think they have as much as they can handle for this year, and it will not answer to allow birch in the round log to lay over. They have taken out in spruce, pine, birch and ash, nearly nine million feet.

—The leading Quebec houses have lately made extensive purchases of new rafts for European ports about August next; the prices are in some instances reported to be an advance of about 5d. per foot on last year. The estimated manufacture from the Ottawa is put at 2,000,000 feet of square pine, waney pine 700,000 feet. There has been a good demand for first class square in the Clyde during last winter, and considerable sales of this class of timber have been made.

—Several sales of Quebec spruce lumber have been made lately at very good prices; in some cases $11 per 1,000 feet for mill cut, culls out. This is about $1 better than last year. Pine lumber, however, is quite a drag both here and in the United States market. There seems to be a feeling in the United States markets that things are more likely to become worse than better; the effects of the strikes now so prevalent in the States are beginning to be most seriously felt, and large operators are getting very cautious when buying for future delivery. There is a fair demand for spruce lumber for the United States' market, and also for common grades of pine boards, otherwise business is very dull.

NEW BRUNSWICK.

—Messrs. J. & J. H. Titus, Smithtown, are making extensive repairs at their mill. About twenty-five feet of an addition is being constructed for the purpose of putting in a lathing machine.

—Haley Bros. & Co., who have been operating a planing mill at St. John, have dissolved partnership. The business will be continued as usual.

NOVA SCOTIA.

—The great timber ship which the New York man, Robertson, intends to tow from Nova Scotia to New York is now more than half completed at Joggins, and it is expected that she will be launched early in June, and start on her voyage immediately afterwards.

MANITOBA AND THE NORTH-WEST.

—The machinery for a new saw mill at McLeod has arrived, and the mill will soon be running.

—Mr. Blanche, of Springbank, is putting up a portable steam saw mill on the Elbow River about fifteen miles from Calgary.

—Dick Banning & Co., of Winnipeg, will cut this year from 8 to 9 million feet of their own, and three million additional from Minnesota. They report prospects for business very good.

—In consideration of a vigorous protest on the part of Winnipeg lumber dealers against the use of British Columbia cedar for block paving purposes, the City Council will use pine grown within the Province.

—It is said that Mr. John A. Christie is about to open up the saw mill at Brandon. He visited Birtle recently to make arrangements regarding logs, which he intends floating down the Assiniboine River to this point.

—A planing mill at Brandon, which has been standing idle for some years, was destroyed by fire a few days ago. The property was owned by a Mr. Griggs, of London, Ont. The loss will be light, without insurance.

BRITISH COLUMBIA.

—Vancouver is coming to the front as quite an important lumbering centre.

—Leamy & Kyle, who have a saw mill at Vancouver, have lately formed a partnership with George Cassady, of New Brunswick, for the establishment at Vancouver of a sash and door factory on an extensive scale. It is understood the factory will be supplied with the most modern machinery. The main building will be 60x75 feet, clear of boiler room, drying rooms, etc.

—Twenty cargoes of coal, lumber and merchandise were exported from ports in this province during the month of April. The aggregate quantity of lumber taken is: Burrard Inlet, 3,555,075 feet; Chemainus, 1,038,000 feet; total, 4,593,076 feet. Seven cargoes of coal were exported from Nanaimo, aggregating 25,310 tons; and from Departure Bay, 16,470 tons; Port Moody, 2,250 tons; total, 34,030 tons. The coal was valued at $209,000; the lumber at $39,709; total value of lumber and coal exported during the month of April, 268,709; total tonnage engaged in carrying the above cargoes 29,185.

—Mr. C. D. Rand, of the well-known firm of Rand Bros., has been the medium through which a large transaction in timber lands in British Columbia has been effected, the sum involved being stated on reliable authority to be in the neighborhood of $40,000. Mr. James McLaren, late of Perth, Ont., who takes a leading place in the lumber interests of that province, is the purchaser. The purchase consists of over 2,000 acres of timberlands along the coast district, and belonged to Messrs. J. C. Prevost, of Victoria, and W. J. Goepel, and it will probably not be long before Mr. McLaren with his great enterprise will commence operations on his property and thus give an impetus to the lumber trade.

—At the last session of the British Columbia Legislature lately adjourned, a new land act was passed which is of special interest to lumbermen. By an act passed in 1887, the sale of timber lands was prohibited, and such lands were only permitted to be leased. After a short trial, this regulation is now abolished. The new act permits the lease of Government timber lands for a term of years for the purpose of lumbering at an annual rental per acre, and a royalty on all lumber manufactured. Lands so leased will be held for a sale by pre-emption, for settlers, but pre-emptors will not be allowed to cut timber on leased lands, excepting what they may require for their own use. Special licenses will be granted to cut timber on an area not exceeding 1,000 acres, and for a period not exceeding one year.

AMERICAN NOTES.

—In the forests of New Hampshire the snow is still three feet deep.

—Alpena has shipped 1,160,000 feet of lumber and 370,000 pieces of lath this season.

—The log cut in the Duluth district, Minn., is reported as aggregating 230,000,000.

—The saw mills throughout the Mississippi valley are suffering from too much water.

—Reliable estimates show that 8,000,000 hoot calks are used by the lumber trade annually.

—The English trade papers report a good business doing in walnut logs, and prices for them are fully maintained.

—The firm of John McLennan & Son, of Bay City, have about 7,000,000 feet of hardwood to handle this summer.

—Ten to thirteen million feet of lumber was burned at Big Rapids, Mich., May 3rd. Loss $120,000; insurance $100,000.

—At Muskegon the lumber shovers' union is still resolute and refuse to make any cut on their demand for $5 per day for loading vessels.

—Some of the Southern papers are raising their protest against the extensive purchases being made by Northern capitalists in timber lands.

—The outlook for the season just commencing would seem to be more than ordinarily favorable for every branch of the lumber trade, including shingles.

—La Crosse (Mich.) mills employ large numbers of girls in edging or knot-sawing and packing shingles. Bay City millmen are about adopting a similar practice.

—The John Spry planing mill at Sault Ste. Marie, Mich., has been sold to J. B. Sweath, of Marquette, who will enlarge and increase it into a $50,000 sash and blind factory.

—During the past two years sawing capacity to the extent of 80,000,000 feet per annum has been destroyed by fire in the Saginaw valley, Mich. Only two new mills were put up in that period.

—A writer on saw mill building says: "Put a corrugated iron roof on your mill. It won't cost much and you won't have to keep a man on the roof with a pail of water, putting out fires that are bound to start." That is good advice.

—A couple of Michigan men have taken out patents upon a band mill carrying two saws, which is designed to cut in both directions, so that no time is lost in the process of gigging back. A board is cut from the log in running one way by one of the saws, and another by the saw in returning.

—There is such a demand for Maine spruce gum that there are fears expressed that the trees are giving out. A correspondent suggests that they may be coaxed to give more if treated as the gum trees of the East are. The natives hack the bark with their hatchets, and in due time the tree weeps gum.

—Vermont is the first state to announce the result of the maple sugar season of 1888. The output is estimated at 15,000,000 pounds, the value of which is $1,250,000. To obtain that amount of sugar 5,000,000 trees were tapped. It utilized, the sugar production would be 50,000,000 pounds—150 pounds to every inh

—Hemlock has been for some years working into an established position in the western lumber trade, and although it does not get very much notice, there is no doubt but that it is making material progress all the time. It has become a regular item of stock with leading western dealers, mainly in the shape of dimension, but occasionally as boards. It does not yet rank up with pine, generally selling from $1 to $1.50 below for similar stock.

—A singular circumstance exists in connection with the lumber business in the Saginaw valley this season, which places very many operators in a quandary. The water in the lakes is pronounced a foot lower than the ordinary stage; this naturally affects the streams emptying into the lakes, and the result is that great difficulty is already being experienced in "log running," and it is predicted and greatly feared that it will result in hanging up a considerable portion of the anticipated stock for the mills.

—Some months ago, says a Michigan paper, a party working in the lumber camp of Wm. Coach, on the Sturgeon river ordered 31 tenth ticket in The Louisiana State Lottery. One of these was a tenth of ticket No. 71,573, which won the first prize of $150,000, in the drawing of the 7th of February, giving the handsome sum of $15,000 to be divided. There were sixteen in the club, the tickets being sent to Geo. J. Johnson, of Baraga. Three of the holders were of one family, being John Bowen, his wife and child, who thus secures a good share.

EUROPEAN NOTES

—Pitch pine cargoes to the Thames are arriving freely.

—Imports to the London market begin to show a marked increase especially from the Norway ports.

—Reports from shipbuilding centres are encouraging, and the majority of yards are well occupied with work.

—Somewhat more animation is noticeable in the free-on-board trade, both in London and on the coast.

—Denny, Mott & Dickson's London circular, under date of May 2nd, reports nothing doing in Canadian timber, pending fresh season's arrivals.

—Liverpool reports state that the first arrivals of pine deals, boards and sidings, from Montreal and Quebec, by the regular steamship lines came in during the month just closed. Business, though quiet, is steady, and a fair consumption seems to be going on.

—The *Globe's* London cable says: "The Glasgow Exhibition was opened May 8th by the Prince and Princess of Wales. The weather was lovely. The Canadian exhibit, in charge of Captain Clark and Thomas Graham, includes cereals, timber, minerals, natural history, paintings and photographs. The exhibition promises to be the most successful ever held in Scotland.

CASUALTIES.

George Metcalf lost a third finger from his left hand the other day while working a circular saw at a Penetang. saw mill.

John Hearty, a shantyman, was drowned in Trout Lake some days since. The body was taken to Vinton where he formerly resided.

A workman named Wilson, employed in a saw mill at Deseronto, had one of his thumbs torn off by a sawdust carrier. Amputation of the arm below the elbow was found necessary. The injured man lives at Campbellford.

About a fortnight ago, W. J. Brown, while working a large shingle press in Toronto, had his left hand caught in the machinery and crushed to a jelly. It is said that the poor fellow bore his agony manfully until released. He was taken to the hospital, where the hand was amputated, and he is now doing well.

A young man named Ernest Grant was instantly killed in a Warsaw (Ont.) mill some days ago. The employees were engaged in siding railway ties when by some means the saw caught a tie after the dog holding it on the carriage had been loosened and throwing it back struck the young man on the temple. He immediately sprang to his feet, put his hands to his head and dropped over dead.

Henry Jones, employed in Graham's planing mill, Brantford, Ont., got under the floor to adjust a belt. Somehow his clothes caught in the revolving shaft, and when he climbed up into the shop again he was attired only in his socks and boots the rest of his clothes being whirling around the shaft at the rate of two hundred revolutions to the minute. He was only slightly bruised, so that after borrowing some clothes he was able to walk home.

HARDWOOD LUMBER AND ITS MANUFACTURE.

If the manufacturer of hardwood lumber would pay the same attention to his business as the pine man does his, there would be less dissatisfaction about the inspection of his lumber. If he learned the requirements of this or any other market he would know that to please, he must send his product in good condition. There are too many sawyers of hardwood who have merely "picked up" the "trade," the result is that many a No. 1 log which if handled as a pine sawyer would handle it would turn out valuable lumber, but instead it is not sawed with judgment and the result is one-half its value is gone, and even the good is not extra. To know how to properly put a "carriage" and its foundation so that it will run true; to know how to set a saw with just enough "set" to cut smooth, even lumber; to know how to put a log on the carriage to cut as few "heart" boards as possible; to know when to "turn" a log—in short, to know how to get the best results out of logs is not in the power of him who has merely "picked up" his trade, and the sooner this is learned by the manufacturer of valuable lumber, the better for the credit side of his bank account.

The prevailing custom of paying a stated price per thousand feet for sawing, is another cause of much poorly sawed lumber. The sawyer may know his business thoroughly, but to work up to his knowledge may require more extra time than he is willing to devote to "the other man's" interests, and the result is he does a good day's work in the number of feet he has sawed, but the man for whom the work was done doubly pays for it. How much better it would be for both mill owner and the man who is having the work done, could they agree on a stated price per hour. It may seem a broad assertion, but I venture to say that by this arrangement the man for whom the sawing is done—providing the logs sawed be valuable timber—will gain enough to pay for the whole day's saw bill even though he has a third more thousand feet, than though he has paid a stated price per thousand feet. By this plan the sawyer can see advantages to be taken of a log which never would have occurred to him if quantity instead of quality were taken into consideration. The mill owner who saws his own logs, need not be told that care must be taken, and yet many will "butcher" their own timber as though they were not sawing money out of their own pockets every hour they run their mill. These are the men who want the lumber buyers from the large markets to pay them the same price that the careful sawyer gets for his products, and will think he has not been fairly dealt with if he is made to pay for his own mistake.

I have tried many ways for getting the most good lumber out of logs, and find this is best: first take off a slab, turn the slab side down upon the carriage, and saw the log through past the heart until you get a clear face, if the log be a good one, then turn it over against the head blocks until you have a wide, clear face, which may leave a plank two, three or four inches thick, owing to the size of a log. Then take the sawed boards or plank, and after running the head blocks back 24 or more inches, place the boards or planks, whichever you have sawed, so that the saw will edge them properly. To determine just where the saw will come may be done by sighting, or better still by the man at either blocks using a two foot measure, which placed across the board, back to the block, will show how far out to place it (at board); treat the other edge the same way, and if the heart runs straight enough not to cut away two much lumber, saw it out. A better way to edge lumber, but requiring extra machinery, is to have attached to the mill an edging saw mill. In this way the lumber can be edged as fast as the log is sawed, and where a mill can be so provided the result will show that it pays well.

Of course when the logs are poor so much care is not necessary, but one thing I have paid dearly to learn and that is, no log can be too poor to neglect to saw full thickness. Thousands of dollars have been lost in not urging upon the sawyer the great importance of sawing full. There is a double loss in thin lumber. It drops one grade if inch, and will often be refused altogether, while on the other hand, if a car load of lumber be plump, but really a little inferior, its thickness will often sell it, so that a manufacturer can not urge too emphatically upon his sawyer to be liberal in thickness. A stout 1-16 for ⅝, and one inch and a scant ⅛ for inch and a quarter and inch and a half, and full ⅛ for two-inch; for three and four-inch 3-16 is not too much; better too thick than too thin.

A careless sawyer will often allow his log to "cant" out, making one edge of the board plump while the other edge may lack just enough to spoil the board for the grade into which its quality would place it. This same result more often occurs from the carriage not being properly set in place; or again, the saw may heat and "run." A good sawyer will see that everything is kept in perfect order, and stop at once to adjust his mill at the first mis-cut board.

Not a mill man in the country, but who can tell just how to properly stick lumber, and when to stick it, and yet when the lumber is marked, it shows that some of the many have made a grave mistake, especially so in the case of poplar and other light colored lumber. In sawing poplar, when it is green with sap, it should be stuck up at once, as if left piled together it will "sap color" in a few hours. "Haven't time," will not answer! If you care to get the full value of your lumber, you *must* stick it up as fast as sawed. This is true of oak, and in fact of all lumber affected by sap. Lumber manufacturers often wonder why their stock is not as bright and nice as some they have seen. If these same men continue to saw their lumber and pile it close together, and leave it until they have *time* to stick it up, then I can assure them they will spend the rest of their days wondering. This should be the order in importance with them, first how to keep the lumber bright, then how to saw it properly.

Use narrow strips, and under no circumstances may they be green, as they will most certainly color the wood wherever they touch, and if left too long will rot it. If you have no dry sticks and are on a railway line, buy a car load and run them to your mill; it will be money well spent, and the first sawing you do let it be on a good supply of sticking lath, which will soon be dry enough to use.

Walnut should be piled together as soon as sawed, and will receive no injury if not stuck up for some time after sawing. The sap seems to dry out faster when finally the lumber is put on sticks, than if stuck right from the saw.

If you have plenty of mill yard room, pile your lumber thus: Set the piling blocks at least a foot from the ground, and with sufficient fall to let the rain run off readily when the pile is finished and covered. Begin by laying the first course with the boards say six inches apart, if wide and narrow ones, put two together, and build the pile in this order, so that when finished the spaces started in the first course will run to the top of the pile. The openings will be so many chimneys, drying out the lumber more in one month than in three months the old way. Start the next pile at least 20 inches away, and so continue covering your yard, and you will be surprised how soon you can begin shipping dry lumber. One point more in the sticking of lumber in which there are sappy boards; instead of placing these boards away in the center of the pile they should be put on the outside as far as possible so that they will get the more air; and again these boards should be laid the sap side down. (I am indebted to one of our large dealers for this last point. Until recently he has been one of the most extensive manufacturers of poplar lumber in the west. He fully sanctions all I have said on the sticking of lumber.)—*New York Lumber Trade Journal.*

THE JAMAICA TRADE.

To the Editor of The Canada Lumberman.

SIR,—Gen. Laurie's motion for all correspondence relating to the official visit to Ottawa in 1885 of the Jamaica commissioners is, I trust, the unostentatious beginning of a most important movement. Few persons, not directly concerned, are aware that the resolutions of the Jamaica Legislature authorizing the appointment of the commissioners empowered them to discuss with the Canadian Government the admission of Jamaica into the Dominion as well as Commercial Reciprocity on a basis somewhat similar to that of the Elgin Treary of 1854 between Canada and the United States. Fewer still are aware that within a few days of the unanimous passage of these resolutions the Jamaica Legislature, the Legislature of the Leeward Islands, also passed unanimously resolutions couched in almost identical terms. The visit of the Jamaica commissioners being temporarily, and from no fault of theirs, a failure. Those delegates from the Leeward Isles were not sent, though the resolution authorizing their appointment is still unrescinded. Two of the Jamaica commissioners hold Cabinet positions in the Government, the third, Hon. C. S. Farquharson, is a Legislative councillor of the island, and the fourth, Mr. Charles Levy, is a wealthy sugar planter and the head of a large London firm of merchants and ship-owners, which for over a century has traded extensively with Jamaica. Their high culture, polished manners and intimate knowledge of the questions they came to discuss created a more favorable impression among those who met them in Ottawa, Toronto, Montreal, Halifax, and St. John, in which cities they were warmly received and welcomed by the Boards of Trade, thus sowing the seeds of closer relations between the continental and insular portions of British America, of which Gen. Laurie's motion is, let us hope, the first little spring blade, the modest forerunner of a great and abundant harvest.

The temporary failure of the mission of the Commissioner was due to a despatch of Lord Derby which, with colonial office ignorance of colonial affairs, stipulated that any arrangement entered into between Canada and Jamaica should be open to acceptance by the other British West Indian Islands. The products and circumstances of Jamaica are so different from those of the other islands, that the absurdity of such a stipulation would strike anyone having the least knowledge of the West Indian archipelago. Indeed, had the [illegible] reached Jamaica a few hours sooner the commissioners would not have sailed. At this distance of time there is no impropriety in mentioning that Mr. Levy assured me, when meeting him at the Ottawa station, that he feared its being fatal to the success of the negotiations. And so it proved. The Dominion Ministry very properly declined to abandon the entire revenue (about $3,000,000) derived from sugar which the Jamaica proposals—if opened to acceptance by the other islands—would have necessitated, and the commissioners have returned home unsuccessful and greatly disappointed. Until Lord Derby's obnoxious proviso is rescinded it is safe to predict that reciprocity in natural products between Canada and Jamaica will not be attained. As for political union, it was, I believe, never formally discussed between the commissioners and the Dominion Ministry. The time is unsuitable for such a discussion. The expiring embers of the Riel rebellion were still aglow and the first duty of the hour for those to whose hands were entrusted the destinies of Canada, was not to enlarge the bonds of the Dominion, but to restore peace and prosperity to the vast domains already acquired. Of the admission of Jamaica into the Dominion I shall in this letter say nothing, though I hope shortly if granted space in your columns, to publish something on a subject which I firmly believe will, in the early future, become a most important issue in Canadian politics. In the present letter I shall restrict myself to giving a few statistics, showing the value of the trade that, without any special treaty and under the present heavy tariff of the island, can be done with Jamaica, and will also endeavor to point out how that trade can best be developed. My arguments will apply to a large extent to the development of our trade with the other islands, but I confine myself for the present to Jamaica, it being by far the largest, most populous, and also the most varied in productions and resources of the British group.

By the last census (1881) the population of Jamaica was 580,804, of whom 14,432 were whites, 11,115 East Indian coolies and Chinese, 554,132 black and colored and 1,125 not stated. In 1886, that year being the latest of which I have statistics, this population consumed of imported food stuffs a total value of £539,116; being from Great Britain, £50,007; from the United States, £319,831; from Canada and other British colonies, £168,267, and from other countries, £1,010. Of household furniture, £21,039 worth was imported; being from Great Britain, £10,958; the States, £1,722; Canada, etc., £9, and other countries £351. Of clothing and shoes the total imports were £351,186; of which Great Britain sent £337,551, the States, £11,468; Canada and other colonies, £1,204; and other countries, £984. Building materials, including lumber, amounted to £49,232; being from Great Britain, £8,143; from the States, £34,541; from Canada, etc., £6,500; and from other places, £47. The total value of estate machinery and supplies imported—other than foodstuffs and liquors—was £24,324; Great Britain sending £12,541; the States, £10,185; and Canada, etc., £1,598. Other machinery and tools amounted to £15,052; of which there came from Great Britain, £13,070; from Canada, etc., £11; from the States, £1,592; and from other countries, £378. Coals and coke, chiefly for steamers and gas, came to £38,277; being from Great Britain, £37,145; from the States, £615; from Canada, etc., £166; and from other places, £531. Books and other printed matter reached a total of £9,534; the value from Great Britain being £8,275; from the States, £1,207; from Canada, etc., £14; and from other places, £38. The total value of hardware and iron mongery imported was £68,545; of which Great Britain supplied £53,261; the States, 14,328; Canada, etc., £503; and other countries, £93. Of liquors, the total value imported was £47,443; of which our temperance friends will be glad to learn that the share of Canada and the other colonies was only £175; Great Britain sending £44,091; the States, £1,103; and other countries, £2,074. Jamacia, although tobacco is grown there quite equal to that of Cuba, imports £11,226 worth of the manufactured article, of which Canada sends none; the States, £9,631; other countries, £1,291; and Great Britain, $314, probably for troops and fleet. The miscellaneous imports—so classed in the returns—came to £150,618; of which there came to from Great Britain £82,695; from the States £50,170; from Canada, etc., £4,403; and from other countries £13,350. The total imports of the island for 1886 amounted to £1,325,603, or in round numbers about $6,500,000, of which Great Britain supplied a percentage of 5.13; the States, 34.1; Canada 11.1; and other countries, 3.4. The total export of Jamaica were £1,280,118, or about $6,400,000, of which the percentage sent to Great Britain was 39.7; to the States, 44; to Canada, 3.5; and to other countries, 11.8.

Now what is this miserably small—and I may almost call it—shamefully insignificant volume of Canadian trade with our

greatest tropical island colony chiefly, if not solely, due to? Our dairy products, our flour and our fish are equal in quality to those of the United States, and yet Canada's export of foodstuffs to Jamaica is not quite one half of that of her Southern neighbors. Of household furniture, how comes it that the energetic and tasteful manufacturers of Montreal, Toronto, and a dozen other places have only been able to sell $43 worth, while the American sales reached $8,500, and the British $43,500. Of the million and three quarters of dollars spent on imported clothes and shoes, surely Canada might secure more than $6,000. Of building materials, including lumber, Canada ought certainly to supply Jamaica with as much as the United States does. She now sends not quite a fifth of the quantity furnished by her rival. She ought, too, to send as much coal as the States, instead of only a fourth; and the same may be said about manufactured tobacco and cigars, of which she does not send a dollar's worth, while the American trade in this commodity amounts to $48,000. As to hardware, tools, ironmongery and machinery, etc., I have given the figures, and people will readily see that our export to Jamaica of many of the articles enumerated ought, at least to be trebled, and would be, were suitable steam communication provided. The steamers should be fast and should be fitted with Blackman's patent exhaust or other similar apparatus for the preservation of fruit on the return voyage. Though mails and passengers should be carried, freight should be the chief object aimed at. If of sufficiently light draught, some of the smaller ports of the island might, in time, occasionally be visited with advantage. From the shape of Jamaica, long, narrow and intersected through its entire length by a high mountain range, the traffic of the island will always be chiefly coastal. Jamaica has but one short railway, and the ordinary roads across the island are steep and rugged. Coastal steamers now ply round the island every ten days conveying freight and passengers between the smaller ports and Kingston. A line of subsidised steamers would probably at first only be able to touch at Kingston, as other West India islands would have to be visited, and would be supplied by these coasters with fruit and other homeward freight. But with increased facilities of transport the Jamaica trade would speedily require steamers exclusively devoted to it, and then the smaller ports might be called at, and the cost of transhipment saved. We Canadians scarcely know even by name many of the tropical luxuries, such as yams, guavas, pawpaws, shaddoeles, etc., which a steam line would bring cheaply to our tables, and for which a large demand would speedily be developed among us. A line of steamers traversing the 1,700 miles that separate us from Jamacia would take our lumber, our staves and our fish, our boots and shoes, our dairy produce, oats and hay, our furniture and agricultural implements, our paper, glass, wire fencing, nails, cordage, cottons, tweeds, soaps, candles, canvas, carriages, apples and potatoes, and would bring in return, cheap enough for ordinary use on the tables of our farmers and mechanics, the bananas and oranges, the limes and guavas, the yams and plantains of the tropics. The growth of trade that steam communication would secure for us is no merely fanciful speculation. In the three years (1880-83) that the Cunard service between Kingston and Halifax was subsidized by the Imperial Government the trade from Jamaica to Canada increased from 6.2 per cent. of the whole export in 1880-81 to 16.66 in 1882-83, when as being inconsistent with Free Trade theories—the subsidy was discontinued, and the trade to Canada at once fell, amounting in 1885-86 to only 3½ per cent. of the total export trade of Jamaica. This is pre-eminently a farmer's and working man's question. Steam communication with our fellow subjects in the tropics means better markets, increased work and wages, and cheap luxuries for the Canadian masses, whether ploughing the soil, toiling at the loom or the forge, or wielding the axe in the snow clad forests of our northern or eastern wilderness.

Yours, etc.,

A. SPENCER JONES.

Ottawa, May 10th.

BRITISH COLUMBIA.

Mr. J. S. Chase of this city, who has spent the major part of the past eighteen months on the Pacific coast, returned only last month, has again taken his departure for that section, which he will make the scene of his further labors. In many respects Mr. Chase thinks that the Pacific coast, and particularly the Puget Sound country, is one of the finest sections of the globe. Its business advantages, in their rapid development, offer inducements to men of energy and capital (and to energetic men of small capital as well), unsurpassed by any section of the land. There is money in its timber and its minerals. In some sections of the mountains gold and silver lays around loose on the surface of the ground. Unfortunately for the seeker, it is not minted to his hand, and like all other valuable commodities, takes time, patience and a considerable expenditure of money to separate from the rock with which it is amalgamated. In one of his trips through the mountains Mr. Chase came across a vein of mineral of which he picked up a half dozen specimens from the surface and submitted them to the government assayer at Victoria, obaining the following report: No. 1 assayed at the rate of 29 ounces of silver and 13 ounces of gold to the ton; No. 2, 37½ ounces of silver and 2½ ounces of gold; 3, 43 ounces of silver and eight-tenths of an ounce of gold; No. 4, 27 ounces of silver and 1½ ounces of gold; No. 5, 35 ounces of silver and 5 ounces of gold; No. 6, 49 ounces of silver and half an ounce of gold. These were surface pickings, and but tend to indicate what might be the result of a close research. In our own wanderings in the mountains of British Columbia, we became perfectly satisfied that the whole country was auriferous, and that the time would come when machinery could be so economically availed of that in connection with improved facilities of transportation, the precious metals would be developed to an extent never exceeded in gold or silver mining. The coal of British Columbia is another mine of wealth, its quality being superior to even the highly esteemed bituminous coal of Pennsylvania. Iron and copper mines are found upon Vancouver Island of great richness, awaiting a larger population for utilization. The yellow cedar of the coast is almost, if not fully, equal in closeness of grain to the Holly of the South. It is one of the most difficult woods to find, there being but few tracts of land upon which it grows in any quantity. In fact, one tract of 160 acres on the main land of the Gulf of Georgia and a few scattering forties on Vancouver Island is all that is known to exist in bodies of any extent. It is worth $60 per M in sawed lumber on the coast; as a trimming for contrasts in fine work it is not equalled by any timber known. The fir of the coast has not been exaggerated either for size or quality. Its extent is not so great as is by many supposed, as the large and good timber is confined to a territory west of the coast range of mountains and mainly on a belt of not more than from one to fifteen or twenty miles in depth, largely in a broken and mountainous region where the cost of lumbering would exceed the profit. The timber of the interior does not compare for size or quality with that of the coast, unless we except the red cedar, of which an occassional tract of comparatively small extent is to be found, and when found shows trees of enormous proportions.—*Lumber Trade Journal.*

THE HEMLOCK.

This, which has hitherto been one of the most abundant trees in the forests of Maine, as in those of the maritime provinces of Canada, is fast disappearing, as well beneath the axe of the woodsman, as from the results of the destructive effect of forest fires, to whose action it is very susceptible.

There are two varieties of this tree known to eastern woodsmen—the sapling, or white, and the black, or coarse-barked hemlock. The former is usually the smaller tree, attaining, however, a greater altitude in proportion to the size of its trunk. Its bark is also smoother and whiter. It seems very commonly to follow the banks of rivers and streams, or rather the sides of ridges adjacent to the shores of streams and lakes.

One of the best localities for this wood is to be found on the shores of the Avon river, and its branches, in the vicinity of Windsor, Nova Scotia. It occurs also in many other parts of the interior of that province, as well as in New Brunswick and Maine. In the two places last mentioned, especially in New Brunswick, vast forests, chiefly consisting of rough-barked hemlock, were overthrown, some twenty years since, by a storm, which is locally known as the "Saxby gale," from the fact that the date of its occurrence had been predicted by Lieut. Saxby, of the Royal Navy of England. The destructive effects of this gale, which extended a distance of more than 90 miles up the St. John river from its mouth, may be estimated from the fact that shortly after its occurrence the writer was called upon to examine and report upon some timber land which had been subjected to its influence. Two days were spent in such inspection, during which time he failed in traveling to exceed a distance of from three to four miles a day, the roots, tops and trunks of blown trees meeting him at every few steps, presenting formidable obstacles to anything like a rapid advance.

The gale had been more destructive to this than to any other forest tree, on account of its heavy and spreading top, which offered great resistance to the wind. As the roots ran along near the surface of the ground, where the trees were blown down, they brought with them masses of earth, which formed one of the chief obstacles mentioned above.

The wood of the black hemlock is nearly always more or less shaky, these shakes sometimes extending from the base of the tree to the limbs.

Hemlocks which grow on wet land, as well as those which are found on the low, sandy ridges of carboniferous rocks which occupy the central part of the province of New Brunswick, are usually very shaky, while those which are found on the boulder district of that province, which covers probably 1,100 square miles of its area, are especially good. Excellent trees may be seen standing where [illegible] puzzle one to secure a shovelful of earth, and where [illegible] one might walk for a long distance by stepping from rock to rock, without ever once setting foot to the ground. [illegible] a place the writer has counted, without moving from where he stood, ninety full-grown hemlocks, standing within a very limited radius.

The boulders which cover the extensive district [illegible] Brunswick now alluded to, are composed of granite in nearly all cases. These are frequently porphyritic, enclosing [illegible] of feldspar of large size. The cause of the [illegible] this tree, and of the good qualities of its wood in so unpro[illegible]ious a locality, may perhaps be the result of the [illegible] ition of this feldspar, under the action of changes of temperature and atmospheric agencies which by mechanical and chemical means combined, may have set free from its silica and alumina the 16 or 17 per cent. of potash which the feldspar of [illegible] granite contained, to be thus rendered soluble and fitted to be drawn up by the roots into the body and limbs of the tr[illegible]

In the maritime provinces of Canada, no attention is being paid to the protection of this tree on the property of [illegible] government; on the contrary, settlers are invited to occupy the poor and sandy ridges on which it grows, with the result of poverty to them and their families, and destruction of the surrounding forests from the spread of fire from the clearings.

Several large manufactories have been erected in the province of New Brunswick, for the purpose of ext[illegible] the [illegible] from the bark of the hemlock, the result of w[illegible] that whole forests of this valuable wood have been [illegible] for the bark only, while the tree itself has been left to rot or act as fuel for the fires which every now and then rage in spring or autumn among the forests of this country.

The supply of hemlock of the eastern state[illegible] provinces of Canada will in all probability fa[illegible] of the spruce, from the fact that while the hem[illegible] thickly in certain localities, these are limited in exte[illegible] the contrary, spruce trees are found scattered [illegible] country. The hemlock also is much more easily dest[illegible] fire than the spruce, and does not replace other forests which may have been destroyed nearly as readily as the spruce.

The young hemlock is a remarkably pretty tree; as it g[illegible] older, however, its branches frequently die and the dead and often barkless top of the aged tree gives a by no means agreeable appearence to it and its surroundings.—*Edward Jack, in New York Lumber Trade Journal.*

EXCHANGE ECHOES.

Quebec Chronicle.

From some of the Quebec lumbermen who have lat[illegible] returned from England, it is understood that altho[illegible] the condition of the European markets is not perhaps [illegible] as promising as it was a couple of months ago, there is no reason to anticipate anything but a fairly prosperous season. The demand for Quebec oak at the principle shipbuil[illegible] centres has apparently been satisfied. The anxiety and rush to sell during the boom in prices of the month of Febr[illegible] last, produced the natural result of lower prices, and the then existing demand was satisfied in a shorter time than had been anticipated. Even the shippers, whose interests on this side never permit them to paint the condition of affairs in England in very bright colors, admit the present prospects on the other side are rather more promising than they have been for the past few weeks. Prices of deals are now at least ten per cent. higher than they were at this time last year, and stocks in England are known by the Canadian manufacturers to be much lower than they have ever been before, at least for many years back. This should be one of the most promising features of the present outlook. The American demand for boards continues to be more satisfactory than was anticipated, and is fully equal to that of last year, notwithstanding that the Presidential election year is generally most unfavorable to business with the United States.

London Timber Trades Journal.

The placing of lumber on the free list by the United States government will be—should such a measure pass—an immense stimulus to the Canadian timber trade, with a consequent all-round advance in values, through the introduction of United States capital, in the shape of numerous mills, and a large absorption of Dominion forest limits by the lumber manufacturers from Chicago and Michigan. As far as relates to the wisdom of this step towards free trade by the United States legislature we cannot say much, the tendency of such a measure being to divert capital from their own side to that of the neighboring country, and though, perhaps, the interest on it might return in the shape of cut lumber specially manufactured in the States, the principal would be lost for all time, sunk in lending its assistance in the furthering of Canadian

prosperity. We might just as well argue that capital leaving this country and taking their money with them for carrying on trade abroad were doing so for the benefit of the British empire, but it would not take long before the results disproved our reasoning. Capital has been too fond laterly of leaving our shores, and we have felt the ill effects in the long interval of paralized trade under which the country has groaned. Canadians may pretend what they like, but we question very much if they would not welcome with open arms the new men and money which directly the bill passed, would hasten to bestow themselves upon her. The Southern trade, including the immense range of coast line in the Gulf of Florida, would be neglected for more profitable and better paying fields, and the capital which would otherwise have given spirit to the pitch pine trade be distributed over a foreign land. We can hardly believe that the bill will be carried by the free-traders, who form a very small minority of the United States legislature, though in the interest of Canada we trust that by some accident the measure may pass into law. There is an immense amount of unemployed capital in America, which would speedily be brought into use, buying up farest limits in Canada, where labor and plant are so much cheaper than in the States, and standing pine more plentiful and acceptable in the neighborhood of navigable streams.

Mississippi Valley Lumberman.

The consolidation of the Minneapolis, Sault Ste. Marie and Atlantic, the Minneapolis and Pacific, and the Aberdeen, Bismarck and Northwestern railway brings under a single management about 950 miles of track. It extends the influence of the Sault as a distinct factor in the world of railway traffic, not only across Wisconsin and the upper peninsula of Michigan, but across Minnesota and carries it into the very heart of Dakota. It is easy to foresee what further extension and additions will naturally be made, as time progresses, to the main line now completed. The announcement of the consolidation is coupled with the further statement that very close relationship has been established between the "Soo" and the Canadian Pacific. There is in this statement more of importance even than in the announcement that the consolidation of the line has been effected, because it bears out the assurance that the Canadian Pacific system is to be supplemented by a series of feeders stretching into the states, upon much the same plan as the Northern Pacific has provided its main line with feeders. It is difficult to predict just what significance this consolidation and traffic arrangement will have for the lumber trade. The manufacturers along the "Soo" will undoubtedly be provided with a double outlet—an eastern outlet for their upper grades, and a western field of distribution for their common grades. But should the duty on Canadian lumber be removed it is easy to foresee as direct competition with Canadian lumber in this, and some of the Winconsin markets, as is anticipated at Chicago and at some Lake Erie points. On the same theory upon which Chicago bases some of her hopes for continued supremacy and greatness as a lumber market, when the barrier of duty is removed, St. Paul and Minneapolis can, thanks to the Soo, reasonably anticipate some addition to the volume of their growing importance as a point for the distribution of lumber.

Ottawa Journal.

The Chaudiere lumberman have, it is satisfactory to note, opened the season's campaign under fairly satisfactory auspices. They are in good heart to their prospects, in proof of which extensive improvements and additions have been made to the mills. It is true the mill owners are a little anxious about the lowness of the water this spring, and it is feared that trouble may be experienced. It is very important that no delay occurs to the log drive, as the reserve of logs from last season is very small and may not be sufficient to keep the mills busy till the drive logs arrive at the Chaudiere. The cut this season by Messrs. Booth, Perley & Pattee, Bronson & Weston, Hurdman & Co., Pierce & Co. and E. B. Eddy Manufacturing Company, is estimated by the lumbermen at about 375,000,000 feet, if no delay occurs from low water.

Lumber World.

While "trusts" are multiplying on every side, it may be proper to suggest that it is time to form a "trust" of woodworkers. There is room for a "trust" of sawyers, of machine builders and of manufacturers of all lines of wooden wares. Who will start the ball rolling? The "lumber trust" should be the greatest on the list. Strike while the iron is hot.

—We extract the following from a letter recently received from a London lumber firm:—Prospects for trade here this season are not very encouraging. Sales are slow with a great scarcity of money. Though prices in other places are apparently advancing our people here are cutting and slashing. Where there is sure pay prices are cut so low that to find the margin one has to look through a microscope.

SOME PERTINENT SUGGESTIONS.

Editor Canada Lumberman.

In these days of combines, public morality has received so many shocks that any abuse, except of the most startling kind, fails to arouse indignation. In the name of business, practices, by no means honorable, are resorted to for the furtherence of ends which in and of themselves are laudable. That monstrous doctrine: the end justifies the means, is firmly believed in and acted upon by men who affect to feel great regard for the morals of the public.

A disagreement, relating to the use, or rather the abuse, of the N. R. yard, has arisen between the wholesale and retail dealers of lumber, or, to put it more correctly, an old grievance has at last found expression. The wholesale-retail dealers have for years made this yard their piling ground and retail yard, rent and taxes free, in which they transact their business, thus coming into competition with the retail men. The retail men are extremely desirous that this order of things should be done away, and that no lumber be piled off for the purpose of being sold in small quantities, or in other words, retailed.

When we consider that the retail man is working at a great disadvantage compared with the quasi wholesale dealer, it is not at all surprising that he wishes such unfair competition stopped. It is unjust to the dealer who has his yard in the northern, eastern or western part of the city, that a consumer can go down to the R. R. yard and buy lumber at $1.00 per M lower than the retailer, with the necessary expenses of a yard, is able to sell.

Rent, taxes, insurance and other expenses and losses such as breakage are heavy items in the course of the year, and have to be added to the cost of the lumber, from all of which except $1.00 per car unloading charges, the wholesale-retail man is exempt.

There exists no reason whatever that any firm or firms should be in possession of so valuable a privilege. The demands of the trade do not require it, the growth of the city does not depend on it, the R. R. Co. does not profit by it, the development of the lumber industry of this country is not advanced, in fine it is a privilege which none should possess, not even by purchase. To do business on what may be called public property, like vendors of pea-nuts, is not at all creditable to our wholesale lumber dealers.

What is wholesale dealing? A car of 10,000 feet? Twenty-five or thirty years ago this quantity might possibly have been so imagined, but not at this date. No man in making such a statement, except his ideas are small, very small, can reasonably expect to be understood seriously. A quantity to be considered as a wholesale transaction must be commensurate with the volume of trade done, and we think in this case that the quantity ought to be not less than 100,000 to 150,000 feet if not more.

Another matter in connection herewith, is that some of the lumber billed to the docks, which means a lower rate of freight, is disposed of in the city. For this an excuse might possibly be found, but the point is—was the regular rate of freight paid on removal? Would an investigation into this matter be productive of a dividend to the shareholders of the absorbed N. & N. W. R.?

All and any use of the docks should be prohibited except the one for which they were originally built, that is for shipping; and the right to ship permitted to all so desiring. Not one, two or three firms should enjoy a monopoly, else the time will soon arrive when these lumber firms will raise the plea of vested rights and claim compensation when required to surrender the Company's property. Squatter sovereignty and all that implies, would be practically illustrated in Canada.

That such a state of affairs should been tolerated says very little for the efficiency of the officials of the quondam N. & N. W. R. Granting privileges to one set of men as against others in the same line, the latter contributing largely to the revenue of the Co. requires explanation of no ordinary kind.

We confidently expect now that the G. T. R. has absorbed the N. & N. W. R. that these exclusive and prejudicial privileges will be withdrawn. By far the greater quantity of the lumber sold is carted to the outlying districts or suburbs, and comparatively little sold in the city proper.

The necessity does not exist that the N. & N. W. R. yard should be converted into a market for the especial benefit of a few men who are not enterprising enough to establish first class yards, of which Toronto does not possess one, but one satisfied to exist on sufferance and at the expense of others in the same line of trade. It is, to say the least, a most beggarly way to do business.

Toronto, May 15. Pinus.

—Letters patent of incorporation are asked for by the R. H. Smith Co., limited, to manufacture saws of all descriptions, files, mechanics' tools and implements of all kinds. The chief place of business is St. Catharines, capital stock, $75,000, and the applicants are all St. Catharines men.

THE WESTERN MACHINERY DEPOT.

The Brantford *Telegram* of a late date contains the following reference to the business of Mr. H. W. Petrie, an old-time advertiser in The Lumberman:

Nothing shows the steady growth of Brantford better than the continued solid growth of her institutions. Brantford has always been known as an emporium for iron goods of every kind, and the firms which handle that class of wares have obtained a world-wide celebrity. Foremost among those firms which handle machinery exclusively is that of H. W. Petrie. Last fall Mr. Petrie was compelled by his ever increasing trade to erect a substantial three-storey brick addition to his already large warehouse on Dalhousie street. In the front of this addition is the general office, and immediately behind is Mr. Petrie's private office. The offices are fitted with the latest conveniences for assisting office work, while a large Goldie & McCulloch vault insures the safe keeping of valuables. Through a door in the general office one enters the shipping room, which will in a few days be fitted with a complete set of steam hoisting machinery, so that the heaviest machinery may be brought in, unloaded from the drays, and whisked off to the second or third storey, or put in any desired position in the show room, without the need of a hand being laid to it. Next to this is the show room, extending the full depth of the building. Here is gathered together machinery from all parts of the Dominion, the greater part on this flat being perfectly new, and ready at any moment to be shipped away. Besides handling new machinery of every description, Mr. Petrie probably buys, refits and sells more second-hand machinery than any other dealer in the province. Back of the show room is the repairing shop, in which every second hand machine that comes in receives a thorough overhauling. The machinery on the ground floor is mostly of the heaviest description, planers, saw mills, engines, boilers, and lathes for wood and iron. In the shipping room are boxes of machinery waiting to be shipped to different parts of the Dominion. Here is a saw mill which will shortly be engaged in waging a battle against the Douglas fir of the Rockies. It is addressed to Lillooet, B. C. Beside it is another addressed to Stittsville, among the pineries of the Ottawa valley. Another lot is designed for the Muskoka district, and still another for Richibucto, N. B. These, with a host of others intended for places nearer home, show the extent of Mr. Petrie's trade. Upstairs the woodwork and painting is carried on. Here, spread out on the floor, are the parts of two saw mills which are being arranged before being shipped away. Near them is a broom handle machine which will turn out finished, tapered handles at the rate of six hundred per hour, and beside it is another of still newer pattern, which turns out a continuous stream of handles. On this floor is a collection of small engines designed for running a row of sewing machines and turning coffee mills. These compact little engines run from half a man power to four horse power, and are one of the most interesting features of the immense collection. Here also is an axe handle machine which will turn out thousands of axe handles per day, all moulded to pattern. Passing to other rooms on the same flat we find an immense collection of leather and rubber belting, and rubber hose of every description. Next to this there is a collection of several thousand drills for iron work. Back of this again is another room crowded with all sorts of light machinery. Here are machines that the uninitiated never dreamed of. For instance, here is a green corn cutter for the purpose of cutting green corn for canning factories. This machine removes the soft kernels from the corn as careful as the most fastidious housewife would require, and at the rate that would astonish the average housekeeper. Here is a machine for drawing by suction sawdust and shavings, a quarter of a mile if needs be, through pipes to the furnace of some vast saw mill. There is a machine for cutting barre heads, this one husks, and that one grinds cob and kernels at once into meal for cattle. This contrivance of wheels and bars cuts out spools almost by the bushel, while over against the wall is the pilot wheel and anchor of a steam yacht; hence the expression "from a needle to an anchor," may be applied correctly here. The third flat is a repetition of the first and second, except that the machinery there is somewhat lighter than that below. One of the rooms on the second flat gives us an insight into the methods that have enabled the proprietor to build up this magnificent trade. From top to bottom of the room are shelves fitted with illustrated catalogues, in which every machine in the building is exactly described and numbered. Advertisements are inserted in all the great papers of Canada, and a number of those of the United States, and when a query is received as to some particular piece of machinery, off goes a copy of the catalogue, giving the illustration and description. Last year 20,000 of these catalogues were printed, which proving insufficient, a further supplement of 5,000 was obtained. The majority of the buyers never see Mr. Petrie, the buying being done by letter, and it speaks volumes for the integrity of the proprietor

that he has thus been able in every case to satisfy his customers.

At the Market street station the firm has another large warehouse, where the heaviest kind of machinery is stored. A switch runs right alongside this warehouse, so that boilers, engines, etc., weighing many tons can be handled to and from the cars with the greatest ease. Inside the warehouse as we enter there is a hundred-horse power engine, which in a few days will be shipped to Colpoy's Bay, to run one of the giant saw mills that are to be found in that region. Outside on the platform is the fly wheel for this engine some ten feet in diameter, and weighing some four or five tons. Near this is a biscuit making machine, fitted up with all the devices for turning out every kind of biscuit known to the trade. Further down in the shed is a hand fire engine, which has just come in from some village that has become ambitious enough to buy a steam engine. Near it are several threshing machines with their complement of traction engines to draw them about in the fall. There are also here a number of portable engines on skids, which are intended to run saw mills, stone crushers, etc. Near the door is a planer and matcher, which will shortly be shipped to Hastings county, and near it is a stave cutter intended for the north-western part of the province. Outside are a pair of hydraulic rams, quiet enough now, but powerful lifters when put in action. Water wheels of every kind, size and description are piled up around, while a part of the yard is especially devoted to boilers of the largest kind. On the platform near the south is a hundred-horse power boiler, ready to be shipped to the north, where it will keep the saws of a monster mill in motion. Smoke stacks of all sizes and lengths are piled up, ready to go out with the engines and boilers. On the platform, too, are several large drills and planers for heavy iron work, and near them is a curious machine that will turn out a steady stream of barrel hoops. By its side is a solid, grim looking machine of iron and steel, whose ravenous jaws will shortly be put to work grinding cinders for the asphalt sidewalk of the city.

Altogether this is one of the most bustling and busy establishments of our city, and as for the rest, Mr. Petrie's name is synonymous for reliability and square dealing throughout the Dominion.

TEACHING A NOVICE.

"Will you kindly advise me if I can get any book giving instructions by which a novice may acquire proficiency in estimating stumpage, or number of feet per acre of standing timber. What is the best and cheapest work, and where can it be had?"

We do not know of any such book outside of a good lumber journal. Aside from these, a book about five feet six high, weighing from 150 to 175 pounds avoirdupois, capable of swallowing about four pounds of salt pork a day, and rivaling the pedestrians who recently walked 100 miles a day in New York, in point of endurance. A book written upon the brain of a man who has made his home in the wild woods, is the only work of any reliability of which we have knowledge. Our advice would be: 1st. Get such a book (?) 2nd. Go yourself. 3rd. Send a boy. If you adopt the second or third propositions, you will first need an outfit. This is not to be found in the parlor of a $4 a day hotel, nor in smoking 25 cent cigars. Get a pair of army blankets and a picking strap, a frying pan and a tin pail, a big chunk of salt pork or bacon, a few quarts of beans and a bag of flower (some land lookers carry their flower in a bottle, claiming superior virtue in the extract.) Don't forget a plug of black tobacco and a briarwood pipe. An axe and a rifle come handy. If you are a novice with the axe don't take a double barreled (beg pardon, double bitted) one, lest when you come to use it, you find it making more time in your leg than in a tree.

Thus provided, with a folding rule, a log book and a memorandum book in your pocket, you start for the forest. You strap the goods, made up into a pack weighing 75 to 100 pounds, upon your shoulders. If you have no suitable packing strap, take off your drawers and pass the legs through the ropes and over your shoulders; it makes a good substitute. Thus equipped you are ready for an exploring trip. Calfskin boots and morocco slippers are not recommended for woods wear, and kid gloves are out of place. First find a section corner to make sure you are on the right land. Look the ground over for awhile, pick out an *average* spot of timber. pace off 72 paces square, and cut down an *average* size tree. If you don't manage to lodge it in another, and it don't kick back and knock you down, measure it off into 16 feet lengths, and by your log tables find out how many feet there is in it. Count the trees on the acre, and you can figure out how many feet they will probably scale. If there are punk knots in sight or any other defects which will make the lumber cost more than it will sell for, it is not advisable to count the tree. By the time you have tramped over 40 acres your "novice" will probably enjoy his pork and no less his "dudeen." When the shades of night fall about him, he will be a fit subject for gathering up a handful of pine spines for a feather bed, and after hunting up a soft rock or a pine log for a pillow, say his prayers and enjoy the sleep of the just. We would not care to buy stumpage on the estimate of a novice from the results of one day's experience, but if he sticks to it long enough, he in the course of a few years would be likely to become an adept if he has the stuff in him that land lookers are made of.

There is another way in which estimating is often done, borrowed from methods often adopted by United States surveyors, but it has its drawbacks, and these sometimes culminate in a drawback toward the penitentiary, and is therefore not to be recommended to "novices." By this method a pleasant room, well lighted, a large table and plenty of writing material and requisite. A large map of the territory to be estimated or surveyed is spread out, and the lines laid out dividing it from other lands, then it is the easiest thing in the world to mark off section lines, which can never be found, and to estimate quantities of timber that never existed. There has been too much of such surveying and estimating, and the outcome has never been satisfactory. Concisely to answer our correspondent's question, timber estimators are born rather than educated, and must learn from experience rather than from books.—*Chicago Lumber Trade Journal.*

PRACTICAL MILLING.

It has been the policy of "the country saw mill" owner to buy that which was cheap. We have reference more particularly to their first plant—their mill, engine and boiler. Let a man want to engage in the saw mill business, nine cases out of ten he counts the profits first, then the costs, and, as he is "a little short," he tries to economize by buying his outfits second-hand. He starts out on a cheap plan, and scours the country for some mill that has passed through the fire, or whose owner has found it far more profitable to let it lay up than to attempt to run it.

He visits the city and looks through the second-hand machinery stores. He looks at one or two new mills, gets completely muddled, and, disgusted, starts off home and buys "Jones' old mill." It has not been run for two or three years, but he can save one hundred or possibly two hundred dollars in this his first purchase. He is told that it is a little behind the times, but then it will do him.

Now all that is wanted is to secure an engineer and head sawyer who is in keeping with the mill, and we have a full-fledged mill to help him cry "hard times," and although gradually, it will soon cause him to feel that saw milling is not what they crack it up to be.

At last he finds an engineer who has done almost everything. He comes along, or, rather, "turns up," and wants a job. He has been used to large mills, big pay and his fireman, but has had a "streak of bad luck" and will take hold of this mill, put it in order and show what can be done. In not a few cases our engineer imparts "his bad luck" for he knows nothing of engineering, and but very little of firing. Our new proprietor is new at the wheel, and does not discover that his engineer is second-hand until reminded of it by repeated accidents and mishaps that suggest something wrong. A broken ring is looked upon as a necessity, hot wrists result from the mill laying up, steam escaping from nearly every joint of pipe, the piston rod, valve rod, and the several conditions soon suggest that something is not what it should be.

Strange as it may seem, hundreds of men start out thus, holding a penny so close to their eyes as to lose sight of a dollar with their reach. Poor tools make poor workmen, and a more fallacious policy was never pursued than economizing in the plant—getting something cheap regardless of worth. The best is the cheapest, applying this both to tools, mill and labor.

The older mill men, even some who have been looked upon as "full-fledged," have erred to their sorrow, in moving too soon from a good site. They have cut out certain qualities of timber that they have depended upon largely for their run, and without fully investigating whether it would pay to cut other lumber, have hunted up other sites and moved; and in not a few cases to their detriment. It has come under our observation of late, to note where several mills have moved back to their original sites, re-buying timber that they had passed over unnoticed at their first sitting, and, where the strange part comes in, paying for this second cutting a little more than they originally paid for the first, land and all. A little forethought could have saved them money, trouble, time, and expense of two moves.

It takes experience. The practical man studies not only the present but tries to anticipate his future wants. The practical miller counts nothing too good for him, and looks upon the best as the cheapest. He wants good tools, good saws, good files, the best of lacing and belting, and good, steady, experienced men. He knows how to keep them, and they recognize in their employer a man who masters and understands his business. It's a satisfaction to them to work for such a man. It is rarely such a man fails; success is too near the surface. *George Fisher, in the Woodsworker.*

SPRUCE LUMBER.

There is no lumber growing in America to-day, which [illegible] at so low a price in comparison with its intrinsic value as spruce. We know of no wood that could fill its place for light frames or for general building purposes where strength, stiffness and lightness are to be combined in one kind of lumber. Spruce lumber has always been supplied so cheaply to builders that its real value has been underestimated or perhaps overlooked. It is a lamentable fact that the grand spruce forest of northern and eastern New England have been largely sacrificed without any corresponding gain [illegible] operators, mill men or even to lumber dealers.

The principal growth of spruce in America is confined to Maine, New Hampshire and Vermont, the Adirondack region in New York and to Lower Canada, including New Brunswick and Nova Scotia. There is little spruce west of New York state and of the Ottawa river in Canada. Spruce is in much smaller supply on this continent than either pine or hardwood, and is of much slower growth than sapling pine. A scarcity of spruce, which is not likely to occur this generation, would, however, prove a most serious inconvenience to builders.

The supply of pitch pine in the southe[illegible] than the aggregate growth of spruce in the northern states, and for many purposes in heavy mills, bri[illegible] and warehouses the former is the better wood. On the other hand, in the construction of ordinary dwelling houses, roofs and light work, spruce is preferable. It is light, strong and easily worked. When spruce can be used it is much more economically handled and framed than southern pine. A carpenter would hardly take the gift of southern pine for the plates, girts and posts of an ordinary frame house if he could buy spruce at present rates. Norway pine has only about two-thirds the transverse strength of spruce; sapling pine is deficient in strength in comparison with spruce, although easily worked.

The great development of southern industries has infused new life and enterprise into the lumber manufacturing of that section. Northern capital and machinery, tram railways, improved logging, manufacturing and freighting facil[illegible] have reduced the cost of southern pine lumber delivered in northern markets. Again, during the past few years the pitch pine business has been overdone, and many a cargo has sold at less than cost. Yet a singular fact has developed during the last year or two, and that is that in New York and Boston markets the price of large-sized spruce dimensions has reached within a very few dollars per thousand feet of wholesale rates on ordered lots of southern pine. This shows that dealers and builders will have spruce lumber even when its cost nearly approaches that of the southern lumber. The days of extreme low prices for spruce have gone, never to return. The demand now fully equals the supply, and timber land owners and mill men are beginning to appreciate the situation and to act accordingly.

RUNNING THE RAPIDS.

The first man to accomplish the daring feat of running the Arnprior slide on a stick of timber, says the *Chronicle*, was Alexander Oram, foreman for Conroy Bros. It was shortly afterwards performed by our Mr. James Havey, Jr., and "Chain Lighting Stewart," who went through safely on the same stick. It was a very common thing for Stewart to do, and many a time he did it, just for amusement. Stewart was a remarkable man, and it is said that he did many daring acts on the river. He could handle a log or stick of timber, as fast as any one, and it was a common thing for him — in the shanty, during the winter season—to mount the grindstone and have the boys run it as fast as they were able, so as to give him feet practice for the spring drive. He came very near losing his life several times through his fool-hardiness. Once, I think it was on a slide somewhere in the vicinity of Black Donald Creek, Stewart undertook to run through on a stick of timber. It was a rough place, and the logs were very often broken after they got through, so steep was the pitch at the end. Stewart was warned by his companions not to make the attempt, but warnings were not new things to him, and, watching for a good piece, he jumped on it and was soon sliding along the narrow passage at a lightning speed. His comrades shouted at him to jump for they well knew that to go over that frightful pitch was certain death. At the end of the slide was a projecting beam, and when Stewart neared it, his well trained eye measured the distance, and making a bound, alighted safely on it. It was well he did, for if he had struck the timber his reckless career would certainly have terminated there and then.

NEW WATER JACKETED

CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

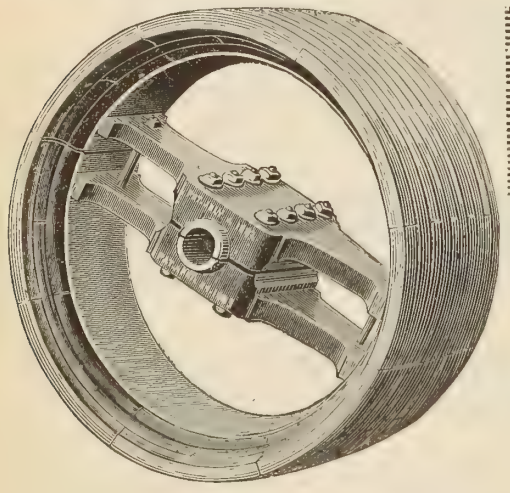
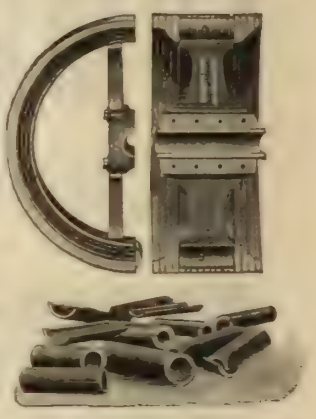
DODGE ⁜ PATENT ⁜ WOOD ⁜ SEPARABLE ⁜ OR ⁜ SPLIT ⁜ PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :

Portion of Circumference embraced by Belt.	Rel. value of leather belt On Wooden Pulleys.	Rel. value of leather belt On Iron Pulleys.	Portion of Circumference embraced by Belt.	Rel. value of leather belt On Wooden Pulleys.	Rel. value of leather belt On Iron Pulleys.
.20	1.80	1.42	.20	1,90	1.40
.30	2.43	1.69	.30	2.40	1.70
.40	3.26	2.02	.40	3.30	2.00
.50	4.38	2.41	.50	4.40	2.40
.60	5.88	2.87	.60	5.90	2.90
.70	7.90	3.43	.70	7.90	3.40
Morin.—Appleton's Encylopedia of Mechanical Arts.			Haswell.—Engineers' and Mechanics' Pocket Book.		

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

The tenth annual Industrial Exhibition, which is to take place in Toronto this year, from the 10th to the 22nd of September, promises to eclipse all previous efforts in this direction. We have received a copy of the prize list and programme of attractions, both of which are complete in every particular. Any of our readers who may desire a copy of this prize list can readily obtain one by dropping a post card to Mr. W. J. Hill, the secretary, at Toronto. The prospects for the success of this year's show are very promising, and the directors have set apart a more than usually large amount for special attractions.

THE great Joggins raft seems always to be in some fresh trouble. Some wire rope imported for it in the expectation that it would be admitted free as being for a ship and which was entered accordingly has been seized by the Customs authorities who do not recognise the raft as a ship. And then the question as to whether some of the piles are not really sawlogs and subject to export duty has not been definitely decided. Obstacles by sea and land seem to be in the way of the third attempt of trying to carry out this singular venture. There ought to be a good profit on the first successful trip if all the preliminary expenses are to be covered. There has certainly been a display of great perseverence.

A DECISION of importance has been given in the Supreme Court of California. The Santa Clara Valley Mill and Lumber Company owns three saw mills in Santa Cruz County, where there are also other millowners. To limit the cut and keep up prices the Company leased the other mills, or when that could not be done made contracts with the owners to limit the output. One of these contracts bound the millowner to make and deliver to the Santa Clara Company two million feet of lumber at $11 per thousand and not to sell any other lumber in that or adjacent counties under penalty of $20 per thousand so sold. The contract was broken and the Santa Clara Company sued for damages. These were refused by the Court and on appeal the Supreme Court of California has sustained this judgment in favor of the defendant on the ground that the contract was against public policy being in restriction of trade and to create a monopoly.

ON every hand we learn of the great scarcity of long bill stuff, especially 20, 22 and 24 feet stock. The deficiency does not seem to be caused so much through the scarcity of long logs, but mainly owing to the risk entailed in floating long timber to the mills. The large number of jams, and the consequent heavy loss of logs, this season so far, is indeed a serious question to the lumbermen. It is therefore not surprising that they refrain as far as possible from incurring additional risks by putting many long logs into the streams. There is no uniformity in price for bill stuff at the present time, although prices generally rule high. There is certainly a good field for speculation in the manufacture of this class of stock where the risks incurred are not too great.

THE lumbermen of old Canada have begun to turn their attention to the pine on the other side of the Rocky Mountains. More than one of them is likely to be operating on the Pacific coast. As to the quantity and excellence of the pine and other wood there is no doubt, and the only question would be as to the market if the output were greatly augmented. There seems, however, every likelihood of rapidly increasing settlement on the great prairies and this must bring a demand for lumber in that direction. The markets in Australia also should be capable of extensive development, for they have little but hardwood and their requirements are large. British Columbia should certainly be able to compare with Norway in Melbourne, Sydney and Adelaide if some enterprise were shown in pushing the trade which has its peculiarities.

THE Mills' tariff bill now before Congress is certainly meeting with bitter opposition from numerous quarters, but the following, taken from a Wiscousin paper, takes the palm for unadulterated prejudice. The paper referred to bewails the situation thus:—"Let the Mills bill pass, and this country would stagnate. Our logging and milling interests would result in a failure. Wolf river, now the scene of active life, crowded with logs and covered with log drivers, would be as desolate as a forsaken churchyard. The mills at Three Lakes, Gagen, Cedar, Cavour and Crandon would soon become the abodes of bats and owls. Spiders would spin their webs about the engines and between the saw-teeth; rust would eat away and dust cover up the now brightly polished machinery. The great pulp mill at Monico would digest no more spruce, poplar, balsam or what-not, and pulp wood lands would soon go back for taxes to a county too poor to pay its officers' salaries."

SOMETIME previous to the first of June notice was given by the Grand Trunk Railway that commencing on the 1st ult. a storage charge of 25 cents per car load per week on lumber would be exacted. This bit of news did not come as a surprise to the Toronto lumber dealers, as the threat had often been made before, but for some reason or other invariably failed to mature. The recent difficulty between the wholesale and retail dealers of the Queen City, however, seems to have had something to do with the recent decision of the Grand Trunk authorities. Certainly the best of feeling does not exist between the middlemen and the retailers, and as a consequence each are making a strong effort to get the best of the situation. Another month has come and gone, but notwithstanding the order above spoken of the question of storage seems to have again fallen through, and the old system is still in vogue. One thing is certain and that is that the lumber trade of Toronto, under present conditions, has to depend altogether too much on the railways for storage room. What is wanted, and what must sooner or later be had, is a central piling ground in close proximity to the various railways, large enough to accommodate the wants of the wholesale trade of the city. The matter is already we understand, receiving more or less attention.

THE stir created by Senator Clemow's sawdust committee of the last session of the Dominion Parliament has resulted in something tangible being effected. Negotiations have been in progress between the Chaudiere lumbermen and the Government in reference to the examination of the Ottawa river for the purpose of determining to what [illegible] charged from the mills injures the river, and it is understood that Sir Hector Langevin has consented to the application of the lumbermen for the appointment of a commission of engineers to investigate the matter. It is understood that Mr. Sandford Fleming will undertake the examination, provided he receives from the Government copies of the survey of the river made for the government some y[illegible] C.E. The lumbermen have agreed to [illegible] It is to be hoped that the great lumber inter[illegible] will not be effected by such an examinati[illegible] prove to the mutual interest of all parties concerned to allow the matter to drop.

SOMETIMES the settler is told, especially by the party politicians on the hunt for votes, to look upon the lumberman as his natural enemy, or at least as having antagonistic interests. Many a settler in the backwoods knows the truth to be very different, finding in the lumberman his best friend and most renumerative customer. A striking instance is given of this fact by a gentleman who has been visiting Lake Temiscaming last winter. He describes the lumberman as being busily at work there and having a number of shanties established in that far away region. Settlers are also becoming numerous and they are looking forward to finding for years to come customers in the lumber shanties for all they can raise, and at good prices. What they consider good prices may be judged from the quotations, $30 a ton for hay, $1 a bag for potatoes and 75 cts. a bushel for oats. No wonder the settlers in the Township of Dymond appreciate the lumbermen and wish to keep them to themselves, declaring even that they have no wish to see a railway built so that they may retain this profitable monopoly. Many a now flourishing agricultural community has thus been built up in its early days by the timely aid thus given by the lumbermen, though they do not always remember these past benefits at a later period. A look at the map to note the exact situation of Lake Temiscaming shows how far a field lumbering is now carried on in Ontario, what were distant backwoods a few years ago now coming well to the front by comparison.

THE magnificent redwood forests of California are the theme of a recent article by the San Francisco *Bulletin*. It describes the great inroads that have been made in the accessible timber, but fortunately the redwood forests of the Pacific slope seem to have far greater powers of reproduction than the Canadian pine woods, so that in some cases there is a very valuable second growth. Our contemporary says, however, that the redwood forests of Mendocino, Humbolt, Del Norte and Siskiyon are still almost in a virgin state. Not being accessible from the sea nor penetrated by railways, they have to a great extent been left in the hands of the government, though they are open to purchase at $2.50 an acre. It is expected that railways will traverse them before long, when being made accessible they will become immensely valuable. Michigan lumbermen, the *Bulletin* says, have already invested largely in these forests. We know that these same Michigan lumbermen had already made extensive purchases in the forests of the Southern States and in the pine lands of Ontario. This would seem to indicate that these gentlemen forsee a serious denudation of the Michigan forests at no very distant epoch, and may be taken as a note of warning to our own lumbermen to be somewhat conservative in their operations, and not to sacrifice their prosperity for an insufficient return by being too eager to force sales prematurely if a little holding back would give better results. The Michigan lumbermen by the by are not alone in investing in Pacific coast forests, some of our Ontario lumbermen being reported to have done the same in British Columbia, where the magnificent forests wil some day acquire a very high value.

THE Act which has just passed the Dominion Government for the suppression of gambling in stocks and merchandise makes

it a misdemeanor, punishable by five years' imprisonment and a fine, (1) to make a contract for the sale or purchase of stock in any company or undertaking in Canada or elsewhere, or of merchandise with the intent to make profit by the rise or fall in price, and without the *bona fide* intention of acquiring any such stock or merchandise; (2) to make a contract for the sale of stock or merchandise with the intent to profit by the rise or fall in the price thereof, when there is no delivery or *bona fide* intention to give or receive delivery of the stock or merchandise so bought or sold. This section applies to every one who "acts, aids, or abets in the making or signing of any such contract or agreement." It is also a misdemeanor, subject to a year's imprisonment, to habitually frequent any office or place when such contracts are made, signed, or negotiated. By the second section the onus of proving the *bona fide* nature of the intention with which the contract was made rests on the party charged under the act. By section 3 every one, either principal or agent, occupying, using, managing, or maintaining the place in which the contracts prohibited in the first section are made, negotiated, or signed, shall be held to be the keeper of a common gaming house, the house or place shall be held to be a gaming house, and the tablets, blackboards, slates, and other implements used in recording prices or fluctuations in the prices of stocks, shares, merchandise, etc., shall be held to be gaming implements within the Dominion Act for the suppression of gambling houses.

THE forests of Quebec were the theme of discussion recently in the Legislative Assembly of the Province. In the first place Mr. Poupore obtained an order of the House for copies of all correspondence exchanged between the lumbermen of the province and the Commissioner of Crown Lands on the subject of the protection of the forests against fire, for which protection $5,000 were voted in the year 1884. It is to be hoped that this step will lead to due attention being given to this very important matter of so great interest not only for the trade but for the public revenue and for the whole community. Immediately afterwards Mr. Tessier moved a resolution, which after a long preamble, setting forth the evils resulting from the destruction of forests, the benefits derived from forests, cultivation and the large profits which the different countries of Europe drew from their forests, declaring that "it is of the highest interest for the Government to take measures to introduce the study of silviculture which has produced such good results in Europe and India, so as to permit the Province to draw from the forest means of augmenting its revenues and to promote systematically the interests of colonization by furnishing the colonist with a safeguard for the future." The resolution was adopted. The system of setting apart forest reserves in the Province of Quebec is to be abandoned and it is said that regulations are to be adopted reserving a certain amount of timber for the settlers on each lot. It is to be hoped that this does not indicate the encouragement of settlers upon the limits, for that is a system which infallibly leads to much distinction of property, and to friction which might well be avoided. Till these regulations are actually framed it would be premature to say that they must necessarily be mischievous, but the report is not assuring.

DURING the month just closed the tariff on lumber has had a generous share of attention in the debate in Congress over the Mills bill. Notwithstanding a most persistent opposition, the lumber clauses of the bill, taking off the United States customs duties, were accepted. It was surprising what wide differences of opinion there were, even among those of the same side, whether for or against the reduction. Hardly any two speakers seemed quite in accord as to the exact incidence of the duty, some holding that the Canadian manufacturer paid it, and others that it was paid by the United States, while others thought that it was divided in various proportions. Some maintained that the change was simply making the Canadian lumbermen a present of the amount of duty, while others declared that it would give the people cheap building material reducing the profits of the United States lumbermen. It was urged that it would preserve the pine forests of the North-Western States while depleting those of Canada, but others argued that by diminishing the value of the United States forests it would make owners less careful of the property. In the course of the debate "Sunset" Cox, of New York, is reported as saying that the lumbermen were almost all millionares, men who had made the forests of Michigan almost a calcined desolation. He wanted to protect the forests against a tariff which offered a premium to selfish people to cut them down, leaving scars and waste places and breeding places of malaria. Mr. Dockery of Missouri, said the explanation of the failure of lumbermen's wages to increase lay in the fact that 90 per cent. of the workmen were Canadians. Mr. Guenther, of Wisconsin, predicted that the Democratic party, if it passed this bill, would go to that place paved with good intentions where every limb and knot of timber would be used, not to raise the revenue, but to raise the temperature to at least 600 deg. above zero. The debate on the pending paragraph expiring, the amendment to strike out from the free list timber hewed and squared, and timber used for spars and whaves, was rejected by a vote of 61 yeas to 101 nays. On June 19th an arrangement was concluded whereby the tariff bill was laid aside for a week or ten days, therefore for the present it is difficult to forsee what will be the ultimate outcome. There is, however, no doubt but that the prospects are improving for a removal of the lumber duties at no distant date, even if the measure is not carried this year.

CORRESPONDENCE.

TORONTO, June 17th, 1888.

Editor Canada Lumberman.

SIR,—In your issue of June 1st there appears a letter signed by one "Pinus," in which assertions, too one-sided in their nature, are made, that I cannot allow it to pass entirely unchallanged. The present state of affairs as described by "Pinus" has been caused, and maintained up to the present by the retail men themselves. They one and all decline to purchase at the mills, or to quote their own words, "decline to buy a pig in a sack," and desire to see what kind of lumber they are getting for their money; therefore the lumber has to be brought here for their inspection, and if not sold (in order to release the cars) must be piled off until such times as a purchaser is found. Again the retail dealers are so close in financial matters, that I think I may say, that, without exception, they all require the wholesale dealer to pay the entire freight charges before they accept a car of lumber—and this is done in nearly every case, so that the assertion made by "Pinus" that the retail dealers contribute largely to the revenue of the railway company is not correct, and the railway companies are well aware of this fact, and therefore grant privileges to wholesale dealers which they would not otherwise give them.

"Pinus" is well aware that the wholesale dealers have tried in vain to compromise all differences existing between the wholesale and retail men, and all in vain. Some of the retail (or if "Pinus" would like the term better—yard men) are so utterly selfish they want to have all their own way, and give nothing in return. The offer made by the wholesale men was as follows: If the yard men will agree to buy all the lumber they require from the middle-men, and not go to the mills, we on our part promise not to break bulk or sell to any consumer. This offer was declined by some of the most important men in the yard trade, and the matter stands so. There is still another more important phase of the question left untouched by "Pinus," and that is the financial part. I venture to assert, without fear of contradiction, that during the entire of the last winter, that retail men did not retire more than 25% of their paper as it matured, and the wholesale dealers had to carry them through, and one considerable dealer has shown his appreciation of the wholesale dealers leniency, by making away with all his effects and absconding from the country, leaving many crediors to mourn his dishonesty. Is it any wonder I would ask "Pinus" in view of facts above given, that we prefer to distribute our lumber as suits us best, and to reduce our risks as far as possible?

Now as to what quantity of lumber a dealer must sell at one time in order to be classed as a wholesale dealer. I would ask "Pinus" if a grocer sells 10 or 20 lbs of sugar or tea is he not called a retail dealer, and if on the other hand he sells a brl. of sugar or a chest of tea does he not stand as a wholesale man; and the same with a dry goods man, if he disposes of cloth by the yard he is classed as a retailer, if by the bale, as a wholesale man. I therefore claim the same latitude for the lumbermen. If we sell less than a car load we are retail dealers, if by the 1,000 ft. and car load lots, we are retail and wholesale dealers, and just there comes the rub with "Pinus." He evidently desires to be able to sell by car load or smaller quantities and still claim to be only a retailer. "Pinus" had better take the advice given to the shoemaker, "stick to your last, my friend." If "Pinus" and his confreres in the trade will only do this, and so not touch on the preserves of the wholesale men, there will be some chance of a full and complete separation of the operations of both retailers and wholesale men. Then in conclusion let me define our position and our wishes as to the equity of the relations sought to be established between the railway companies and the wholesale dealers. We desire to pay for all we receive, and we frequently pay for a little more than we absolutely get. We have made the following offer for their acceptance: Allow 12 ft. as a suitable space for piling off one car of lumber, charge us for that place, and if we do not keep the space occupied that will be our own fault. Can "Pinus" say that we are trying to gain any advantage over the retail men by this offer? There is little to fear, but the railways will charge us much more per foot than any retailer is paying for his holding, and that coupled with frequent doubling up of parts of cars, and first cost of unloading will make our cost of handling equal to the yard men's. We ask for no monopoly, and will certainly not claim squatter sovereignty. We only ask fair play and to be allowed to do our own business in our own way, paying for all the privileges given us, and asking favors from none. I trust this explanation of the position we wish to occupy will satisfy even "Pinus."

Truly yours,

WHOLESALER.

Trade With Australia.

Editor Canada Lumberman.

SIR,—I enclose you a letter which arrived here some weeks prior to my return from Australia *via* England. It may be of service to your numerous readers. It is from the Hon. Philip Santo, of Adelaide, South Australia. I know Mr. Santo very well. No man in Adelaide has a better reputation. I have no personal interest in the matter referred to in this letter. I presume, however, that I told him what I told many others in that prosperous British colony, that there ought to be a larger trade, especially in timber, between them and the Canadians, who were in possession of as extensive forests and as great a variety and as excellent quality of timber as any country in the world. A great deal of the lumber used is at present brought from the Baltic. What I saw (and I saw a good deal of it) was apparently from second-growth pine, with more knots than could be counted, and with no board above six inches wide. It seems to me a large trade might be established between these two great colonies of Great Britain in other branches of industry as well. I saw spades, shovels, hoes, forks, and other horticultural and agricultural implements imported from the United States. I think we can send as good and as cheap. They must soon (as I predicted in various parts of the country) have stoves such as we use, both for cooking and heating purposes. These are not manufactured at all in Australia. Yours, etc, D. V. LUCAS.

Grimsby, June 16th, 1888.

ADELAIDE, S. Australia, March 12, 1888.

Rev. Dr. D. V. Lucas, Montreal, Canada:

DEAR SIR,—Since you left South Australia I have felt very sorry that I did not speak to you on a matter of business in which I have no doubt you are quite able to obtain for me information that would be of great service in forwarding the object I have in view.

If I am correct, I understood from you when in Adelaide that some of your friends were engaged in the timber and shipping trade. I have been supplied with spruce deals, clear pine, Canada siding and shelving from Boston and New York, and in this way the timber has cost me much more than it should do by direct shipments from some port in Canada.

If, on receipt of this, you can place it in the hands of some good house in the timber trade who would be desirous of doing business with me I think it could be made mutually profitable.

We are short of stocks of this description of timber at present and I think we shall be so for some time. The information I would like to have, if possible, is: The prices on board or afloat at Port Adelaide, say cost, freight, and insurance; the shippers to draw on me at 60 days after sight for the value of the timber and insurance, freight to be payable in the colony, vessel to be about 400 tons or less, the timber to be sound and good in quality. As time is an object with us, your friends might telegraph prices at once, and I will reply. If they do not like to telegraph they may write, but in this way we shall not have the necessary information in time for this season's supply. If they should telegraph, they will only have to state price of each kind of timber in the order in which the specifications enclosed herewith are numbered, say No. 1, price per thousand feet super., which would mean spruce deals, so much per thousand feet super.; in the same way No. 2 would mean dressed shelving; No. 3, Canada siding; and No. 4, clear pine, all at per thousand feet super. as 12x1, as per specification. The vessel to be consigned to me with usual commissions.

Should your friends require any reference I would refer them to the Bank of South Australia, London. * * * I remain, dear sir, yours, faithfully, PHILLIP SANTO.

P. S.—If this matter be carried out satisfactory. I have no doubt but that it will lead to a considerable business in the future, as our silver and tin mines are opening out most satisfactorily, and the consumption of timber must be very large in the future.

SPECIFICATION OF SPRUCE TIMBER SUITABLE FOR THIS MARKET.

No. 1. Say 500 pieces 7x3, 400 pieces 9x3, 8,000 pieces 11x3. Length to run, say from 12 feet upwards to 25 feet; greater proportion to run 15 feet and upwards. Short lengths required for stowage to be 11x3. Timber to be thoroughly dry when stowed, and all sound and of good quality, as free from knots as possible.

No. 2. Shelving dressed, say as follows: 12x1 inches, 10,000 sup.; 14x1, 4,000 sup.; 16x1, 3,000 sup.; 18x1, 3,000. To run full size when dressed: bright and clean and as free from knots as possible.

No. 3. Canada siding, 3 to 8 inches thick, 9, 10, 12, 14, 16 and 18 inches wide and wider, 12 to 16 feet long. About 15,000 super.

No. 4. Clear pine, 3 to 8 inches thick, and mostly from 12 to 26 or 28 inches wide; length 12 to 16 feet. About 20,000 super. Both siding and clear pine to be free from knots.

The above approximate specifications of proportions of the different kinds of timber to be increased or diminished according to the carrying capacity of vessel.

THE FIRE RECORD.

Nicholson's saw mill at Victoria Harbor was recently burned. Loss, about $3,000.

Mr. John Elwood's shingle mill on the Semiahamoo spit, near Westminster, B.C., was burned recently. This mill was turning out large quantities of shingles.

Mr. Bæcheler's saw mill, located between Kingarf and Black Horse, in the county of Bruce, was totally destroyed by fire last month. The loss is estimated at $2,500; no insurance.

The Cedar Hall saw mills and the lumbering establishment at Lake Metapedia have bsen burned down. They belong to the Howard, Guernsey Company, and the loss is reported to be extensive.

On the 25th May Nickerson Bro's. mill, near Victoria Harbor, Ont., together with docks, shop, lumber, and about 200 cords of wood and slabs were destroyed by fire. Loss $4,000; insurance $1,500.

Barnes & Co.'s box shook factory at the Chaudiere, with all the valuable machinery, was destroyed by fire the latter part of May, causing a loss of $100,000 and throwing 125 men out of employment.

The lumber piles burned during the burning of the new shook factory at the Chaudiere were owned by Shepherd, Moore & Co., and by Pierce & Co., successors to Grier & Co. Their loss will be about $2,000.

The rotary saw mill, owned by James Brown, near Wellsford, and a saw mill at Baltimore, both in the Province of New Brunswick, were destroyed by bush fires last month. A large number of deals belonging to the last named mill were also destroyed.

During the early part of June the planing mill and factory at Penetanguishene, Ont., owned by John Craige & Sons were destroyed by fire, together with considerable dressed lumber. No insurance. Loss from $4,000 to $5,000. The firm will rebuild as soon as possible.

The extensive planing mills belonging to Taft, Morgan & Co., at Burlington, Vt., were totally destroyed by fire during the past month. The Sheppard & Moore Lumber Co., near by, had a narrow escape. The business of both these mills is largely connected with the interests of some of the largest Ottawa firms.

During the progress of the great fire at Hull, Que., fire broke out in the blacksmith shop in connection with Hurdman's lumber mill on the Hull side of the Suspension bridge. It originated in the blacksmith shop by a piece of burning iron catching on to the woodwork. In a few seconds the place was in flames. The mill hose were quickly run in though, and in about five minutes the fire was under control. The north end of the building and the roof were pretty badly burnt. The loss on the building was light. In the same building separated by a wooden partition are the machines by whlch the mills are lit by electricity. The fire got into this room and two of the machines were burnt. They are valued at $5,000. About fifteen minutes before Hurdman's fire broke out, Messrs. Pennock & Mason had concluded a risk on the building. They won't lose much though.

On Sunday evening, June 10th, a very destructive fire occurred in the huge lumber piles belonging to the Lakefield Lumber and Manufacturing Co., at Lakefield. How the fire originated is not positively known, but incendiarism is strongly spoken of. A strong wind prevailed and at the outset it was generally feared that all that was left of last season's cut—about four million feet—would become a prey to the devouring element; but through the heroic efforts of the fire brigade and citizens of the village, and the prompt response of the Peterborough Firemen to the call for aid, over three quarters of the lumber was saved. The portion destroyed, however, was the most valuable part of the stock, being the best quality pine 16 feet boards. The total loss foots up to about $15,000. The Company had $20,000 insurance on the entire stock, divided equally between the Western and the Liverpool, London & Globe.

CASUALTIES.

A young man named John Payne, of the township of Horton (Ont.) recently lost his life while driving on the Wahnapitae river.

James McCabe, a teamster, employed in Cozzens' lumber yard at Sarnia, was instantly killed a short time since, through the team he was driving running away.

A man named Samuel Gilgore, 22 years of age, engaged on one of the Messrs. Strickland's drives, was drowned in Jack Creek, near Apsley, Ont., recently.

A workman in Neil McKenzie's saw mill, at St. Pierre Baptiste, Que., had his arm completely shattered some days ago by a piece of timber being thrown from a saw.

A man named Bedard, working at one of Mr. W. C. Edwards' mills at Rockland, Ont., was instantly killed some days ago by a board flying from a cutter and striking him on the chest.

A young man named Fleming Johnson while working in W. S. Loggie's shingle mill in the Cassidy factory, Chatham, N.B., had one of his hands cut off at the wrist by a saw which he was trying to relieve of rubbish.

Tom Sanderson, a river driver, was thrown into the Black River at Brosse's Falls the other day and in the plunge he struck his head against the log with such force that he was fearfully cut and nearly fractured his skull.

A sad accident happened at Cape Cove, Que., on June 6th. Silas Vibert, fell under a circular saw mill, both of his legs being cut off and a large wound made on his shoulder. The unfortunate young man died the following morning.

A young man named Dodge, aged 17, working for Carswell, Thistle & Mackay on the Black Donald Creek, was killed on a roll-way recently. Three logs rolled on to him, crushing him to death. Several other men had narrow escapes.

A young man named Penton, of Three Rivers, who is working in the Ottawa Lumber Company's Mill, at the Calumet, met with a painful accident recently, one of the fingers of his left hand being completely severed by a butting saw at which he was working.

William Parsons, an Englishman, 24 years old, who was married in Toronto last New Year's eve, was assisting to place a heavy timber in the lower pier of a mill-race in course of construction, at Suspension Bridge, when he fell into the river, was carried through the rapids and drowned.

An accident occurred on Whitestone Lake, near Parry Sound, by which two men working on McCormack's drive named John Morley and John Amou, lost their lives. It appears that the men were crossing the lake in a canoe which by some means capsized and both men were drowned.

The lumbering firm of J. R. Booth & Co., have been advised that a Jos. Desjardins employed as a driver on their drive of logs on Black river was drowned at Floodwood creek on the 15th of June. No particulars as to how the unfortunate man lost his life have been received. Desjardins hails from Montreal.

Mr. R. Clark, engineer at McGibbon's Mill, Penetanguishene, was trying to put the belt on the pumping machine some days ago and was caught in some mysterious manner and whirled round the shaft and left insensible. He is unable to to tell what happened after taking hold of the belt, and he has evidently narrowly escaped what might have been a fearful death. As it is his spine seems to be injured, and he will be laid up for some time.

On June 2nd six men in the employ of Pierre & Co., Ottawa, attempted to run the rapids of Mile Roche at the head of Lake Traverse, on the Pettewawa river, against the orders of their foreman. The boat swung around in the current and upset, drowning Cleophas Theorel, of Point Clair, Hyacinthe Malett, of Buckingham, and Dennis Beaudry, of Papineauville. It is indeed unfortunate that so many men, through bravado, place themselves in the jaws of death, in order to satisfy their desires for foolhardy feats. Casualties of this nature are becoming very frequent.

An accident, which was nearly attended with fatal results, occurred June 3rd on the tramway of the Calgary Lumber Company at Cochrane, N.W.T. A train carrying Lieut. Cochrane, R.N., and party, consisting of Lord and Lady St. Maur, Lady Adela Cochrane, and others, as well as a number of mill hands, was ascending the grade near the mill when one of the cars left the track, throwing one of the hands, Fred. Thompson, off the car and on to the track under the engine which was pushing behind the train. The flange of one of the driving wheels took off Thompson's right ear and he was badly cut about the head and the skull slightly fractured. The rest of the party were badly shaken up, but escaped without serious injuries. Lady Adela Cochrane showed great pluck, and was one of the first to render assistance to the injured man, bandaging and dressing his wounds with the ability and celerity of a trained nurse.

ITEMS OF INTEREST.

The Canadian parliament has voted $1,000,000 for the proposed ship canal at Sault Ste. Marie.

It is estimated that the consumption of lumber is about 500 feet for every individual, therefore every million increase in population calls for 500,000,000 feet of lumber.

To find the diameter of a pulley for any speed multiply diameter of pulley on main shaft by the revolutions (or speed) required, the quotient will be the diameter in inches of required pulley.

A botanical phenomenon in which the people of Leominster, England, take pride is a pair of trees—an oak and an ash—which appear to have but a single trunk. They grow together for about four feet and

A lumber stacking machine, worked by one man, which takes the place of fifteen men, has been invented. The lumber is carried on chains from the trimmer and dropped on the cars in better shape than by the men who formerly did the work.

The great demand for cedar, especially during the past fifteen years, has served to develop an industry second only to that of pine. The supplies necessary for street paving, telegraph and electric poles, and cedar fence posts has sent large gangs into the cedar swamps and to-day the cedars of Canada alone far transcend in the yearly value of the output the famous cedars of Lebanon.

PERSONAL.

Mr. James Scott, of the Georgian Bay Lumber Co., is removing from Waubaushene to Toronto. He does not sever his connection from the above company.

Mr. B. S. Davidson, an old-time lumberman of Pembroke, Ont., was among the callers at this office during the past month. He reports the lumber business in his section in a prosperous condition.

Mr. John Anderson, of Deux Rivieres, late manager of Messrs. A. & P. White's steam saw mill, has left for Washington Territory, where he proposes entering into the lumber business in connection with his brothers.

R. W. Phipps, of Toronto, is shortly going to England to investigate forestry matters there and observe the system of tree-planting in the British Islands, thereby expecting to get valuable information for his next forestry report.

We learn that Mr. A. Cadenhead has accepted the position of manager of the Ontario Lumber Co.'s business at Midland, Ont., vice Mr. F. Hammet, resigned. Mr. C. is, we understand thoroughly experienced and in every way qualified for the position.

Particulars concerning the death of Mr. Murdoch McDonald, formerly of Black River, and who was well known amongst the lumbermen of Northumberland and Gloucester, (N.B.) have been received by his friends. McDonald was one of a party of eleven lumbermen who started from Boston July 1st, 1887, under arrangements with G. D. Emery of Chelsea, to go to Central America and get out mahogany logs for him.

We regret to have to announce the death of Daniel Hilliard, M.P.P. for North Lanark, which sad event took place at the family residence in Pakenham on June 23rd. Deceased was extensively engaged in the lumber business and had the reputation of being a clear-headed and successful business man. He was returned to the Legislative Assembly of Ontario at the last general election as a supporter of the Mowat administration.

When Mr. James Walsh, of the lumber firm of James Walsh & Co., Toronto, dropped into the LUMBERMAN office a few days ago, togged out in a white choker and silk hat, we thought our time had come to make reparation for our sins. A short but pleasant interview, however, convinced us that our visitor was not of the clerical persuasion, but an old-time subscriber to THE LUMBERMAN who desired to pay his subscription up to 1890. We were pleased to see him look so hale and hearty, and also to learn that the business of his firm was prosperous.

Mr. W. W. Belding, of Katrine, Ont., dropped into THE LUMBERMAN sanctum some days ago and in paying his subscription up to 1890 informed us that he was contemplating still further additions to his new mill at the above point. His next move, he informs us, is to put in a band mill and shingle making machinery, and while here interviewed the Wm. Hamilton Manufacturing Co. on the subject. Mr. Belding informs us that his cut of lumber this year will be in the neighborhood of five and a-half million feet. He secures his logs from the south branch of the Maganetawan river.

THE C. P. R. CO'S NEW STEAMER.

Arrangements are about concluded between the Canadian Pacific Company and the Polson Iron Works Company, for the construction by the latter in Toronto of a large steel steamer to run with the "Alberta" and "Athabaska" between Owen Sound and Port Arthur. The new steamer will be wholly built in Toronto, and taken apart for transportation through the Welland Canal. She will be thirty feet longer than either of her two sister ships, and will be one of the largest vessels afloat on fresh water. She will use the engines of the "Algoma," which were saved almost uninjured when that vessel was wrecked on Isle Royale. Two very large steel steamers are to be built in Buffalo for the Canadian Pacific Company, to run between Buffalo and Chicago.

THE NEWS.

ONTARIO.

—Mickle & Dyment's new mill, Barrie is about finished.

—Gravenhurst mills are running ten and a-half hours a day.

—Messrs. Hilliard & Dickson have started up their mill at Pakenham.

—Hamilton lumber dealers complain of a very poor quality of lumber.

—The drives in the Pettawawa district are all coming down satisfactory.

—Phillips & McLeod, planing mill operators, Aurora, have dissolved.

—The various drives around Minden are reported as making good headway.

—Chew's saw mill at Midland narrowly escaped being burned some days ago.

—N. Dyments' drive on the Thessalon river recently broke, causing a loss of 3,000 logs.

—The retail lumber trade of Hamilton is reported to be in a fairly flourishing condition.

—The new boat built for the Georgian Bay Lumber Co. has been successfully launched.

—The Georgian Bay drives are all well forward, and so far it has been a remarkable good driving season.

—Brown & Mahood, shingle manufacturers of Utterson, have assigned for the benefit of their creditors.

—Basswood logs for the Lumber Cutting Machine Company, Belleville, have commenced to arrive at the boom.

—The big new mill belonging to the Canada Lumber Co., at Carleton Place, has commenced a satisfactory run.

—Messrs. J. R. Booth, E. B. Eddy, and R. Hurdman & Co., of Ottawa have put on night gangs in their mills.

—The Ontario Lumber Co., will cut in their three mills this year 20,000,000 feet of lumber and 5,000,000 shingles.

—Miller Brothers have built a new custom saw and shingle mill on the K. and P. railway, at McLaren's Mills station.

—Mr. J. D. Shier, of Bracebridge, has added about $1,500 worth of new machinery to his sawmill during the past winter.

—All the mills in the Georgian Bay district, with the exception of the Emery Lumber Co's mill at Midland, are now running.

—It is expected that 10,000,000 feet of lumber will be cut this season at the mill of Messrs. Christie, Kerr & Co., Bradford.

—Messrs. Moore Bros. are reported to have sold their timber limit on Bye's Creek to Mr. Richard White, of Pembroke.

—Burton Bros. tug "Matamony" recently brought down 2,000,000 feet of logs from Beaver Stone river to Byng Inlet.

—Messrs. Walsh & McKinnon, of Little Current, are making extensive additions to the machinery in their saw mill this season.

—Bush fires have again been raging in the back country in the vicinity of Kingston. Much valuable timber has been destroyed.

—Mr. McCormack's mill east of Sudbury will shortly commence running. This is the same mill operated by Lee & Potter last summer.

—The Rathbun Company are having difficulty with the Knights of Labor, at Kingston, through refusing to discharge non-union employees.

—The Georgian Bay Consolidated Lumber Company are having a small tug built at Midland, to be used at Byng Inlet to run between upper and lower mills.

—Mr. Jacob A. Shaver, of Ancaster, has associated himself with one or two other gentlemen, who are about going into the lumber business in the city of Hamilton.

—Burglars recently entered the lumber office of A. Caldwell & Son, at Lanark, blew the safe door clear across the office, and secured a renumeration of $23 for their work.

—The Blind River Lumber Co., of Blind River, and Buzzwell & Co., of the Spanish, supply a great quantity of lumber for the buildings in course of erection at the Sault.

—During the latter part of May Messrs. Cook Bros. had 10,000 logs adrift from the mouth of the Mississago river, a large portion of which have, however, been secured.

—There is an immense quantity of cedar lying around Lake Manitou ready to be towed by the tug to Vanzaat's landing to be put through the saw mill in course of construction there.

—Hamilton dealers complain that they are now compelled to pay $1 per thousand feet more on bill stuff than heretofore, and find it impossible to raise the price in the local market.

—The Ottawa Lumber Co.'s mills at the Calumet have upwards of 150,000 logs in their booms at the Rouge, and will give employment to a very large number of men during the season.

—The lumbering firm of Perley & Pattee, Ottawa, have a gang of men employed making improvements in the tramways used to convey sawn lumber from the mills to the piling grounds.

—The general store trade of the Georgian Bay Consolidated Lumber Co., has been consolidated under the name of the Canada Trading and Supply Co., with headquarters at Waubaushene.

—It was agreed at a recent meeting of the North West, Ontario and Manitoba Lumber Association to continue the present price list, with the exception of a slight advance in some sizes in dimensions.

—Messrs. Bronson & Weston, of Ottawa, have secured the services of the government dredge, St. Louis, to deepen the canal in front of their new piling grounds at the Deep Cut, so as to allow loaded barges to approach their wharves.

—Davidson & Hay, of Toronto, are locating a mill on the limit recently purchased by that firm close to Lake Nipissing. They have three townships, Hawley, Appelby, and No. 29, off which they expect to take 70,000,000 feet of lumber.

—Messrs. Vigar Bros, Port Arthur, are making considerable improvements in their sawmill. A Cunningham patent steam feeder, together with other additions to their machinery, will, it is expected, give the mill double the capacity it formerly had.

—During the early part of June the houses along the bank of the Ottawa river at Gatineau point were inundated, the water being so high that the occupants were obliged to use the upper portion of their houses and in some cases to abandon them.

—The Rathbun Company have been exceedingly fortunate with their stream driving operations this year. Although the water was low and they had other difficulties to contend with, all their logs will soon reach the booms at Trenton and Belleville.

—Mr. C. Young, of Young's Point, has completed the contract for supplying timber for the coffer dam, stop-logs, piers, etc. being constructed at that place. His saw mill is kept very busy, and it is said that he contemplates increasing its capacity shortly.

—Letters patent have been issued to the Ryan Manufacturing company of Canada with a capital of $100,000. The business of the company will be to manufacture house furnishings, builders' supplies and hardwood specialties, with headquarters at Toronto.

—Mr. G. B. Green, manager of the Upper Ottawa Improvement company, says that the drive of logs on the upper Ottawa is very successful this season. Very few logs have been stuck in the small streams and the smaller drives are coming out into the main stream in good time.

—Manager Lake, of the Rathbun Company's business at Picton, says that the company's sales from January to April, inclusive, for the present year have very largely exceeded the sales made in any previous year since the advent of the Company to Picton, and that in the months named the sales were double what they were in the same period last year.

—Word has been received by the insurance agents of Ottawa, that at a meeting of representatives of insurance companies held in Montreal it was decided to advance the rates of insurance on the yards adjoining Barnes' mills, recently destroyed by fire, but just rebuilt. This means several thousand dollars a year more to pay by the lumbermen. The lumbermen will protest.

—A representative of THE LUMBERMAN recently inspected a main driving belt in a large manufacturing concern in Toronto, manufactured by the Canadian Rubber Co., which has been in continuous service for the past fourteen years. It is still in good condition and doing its duty nobly. This is merely a sample of the quality of the above firms' manufacture.

—The government and the lumbermen have about come to an agreement for settlement of the arrears owed by the lumbermen for water leases at the Chaudiere. The lumbermen agree to pay the balance due by them under the old leases, and take new ones at reduced rates, with conditions providing for the preservation of the water power at the falls. They also want the flow of water on the falls regulated by artificial works.

—Messrs Flatt & Bradley, the well-known lumbermen of Hamilton and Casselman Ont., and East Saginaw, Mich., have just secured an order from England for five million feet of lumber, to be shipped during the present season. We understand that the consignment will foot up to upwards of $75,000. Messrs. Flatt & Bradley are to be congratulated on their success in securing such an important order from across the sea.

—The E. B. Eddy Manufacturing Company is the first Ottawa lumber firm this season to saw new logs cut during the past winter. A small portion of the firm's drive of new logs from the Colonge River arrived at the Chaudiere on the 19th of May, and are now being cut into lumber. This is the earliest that logs have ever reached Ottawa from the lumber districts. The main drive cannot reach the Chaudiere until late in June.

—Messrs. Perley & Pattee have been advised that a serious fire is raging on their limits on the Pettewawa river. The information is brought by one of the employes of the firm, and the particulars are very scanty. The destruction is supposed to have been started from fires made by settlers for the purpose of clearing their lands. No estimate can be formed of the probable loss, as the full extent of the fire is not known, but the limits are of the best in the lumbering districts of the Upper Ottawa.

—The Chaudiere lumbermen, says the *Journal*, are anxiously looking for their drive logs. The reserves held in the booms at Thompson's Bay and Deschenes were very small this season owing to the the short cut last season. The cutting this spring promises to have a short rest as most of the firms will have completed cutting their reserves before this season's drive is in the booms at the Chaudiere. This spring has despite the high water been a very favorable one for the lumbermen and a large quantity of timber has been turned into the yards.

QUEBEC.

—Lake Megantic lumbermen have been very successful in drive operations so far.

—The Cookshire Mill Company, Cookshire, who have an extensive saw mill plant at Cookshire, are building another large mill at Sawyerville.

—Stevedores report ship labor getting scarce at Quebec. Some difficulty is experienced in producing enough men to load the vessels now ready to take in cargo.

—A combination, calculated to injure the business of the legitimate lumbermen, has been formed by the Quebec Timber Farmers, who have fixed a uniform scale of rates.

—The Mantais Mills, Lake Megantic, has been considerably improved this season by the addition of new machinery. The capacity will hereafter be about fifty thousand feet per day.

—A new regulation respecting the removal of timber on Indian lands has been passed. It provides that purchasers of these lands be required to clear five instead of fifteen acres, and after the necessary buildings have been provided the agent may grant a settler's license.

—The demand for lumber in Montreal during the month just closed was fairly good, but despite this a rather gloomy feeling prevails regarding the future. Dealers have experienced some uneasiness owing to the imminent danger to which stocks at the Chaudiere were exposed. That material is now, however, practically out of the millowners hands, having already been disposed of and being in process of delivery. There has been a fair amount of orders from the country and prices are steady and without change.

—One of the largest lumber failures which has occurred in the province of Quebec for some time, took place the early part of June when Mr. W. Little the lumber merchant of Montreal, assigned with liabilities upwards of $200,000. The principal creditors are Ross & Co., of Quebec, $79,354; Bank of Montreal, $24,953; La Banque de Peuple, Three Rivers, $17,394; E. H. Lemay, Montreal, $10,885; Dame Anne Tovell, $9,234; E. B. Eddy & Co., Hull, $7,077. The assets consists of timber limits in St. Maurice district, valued at $40,000; timber limits in Compton, $60,000; land in Florida, $10,000; lots in Rat Portage, $600. The Hon J. G. Ross, of Quebec, has been appointed provincial guardian, and has substituted Mr. Samuel C. Fatt in his place. A supplimentary list of assets and liabilities has been filed in Court. The list, besides the large creditors already given, shows the names of persons largely interested but secured. Dundee Mortgage and Trust Company, $37,470; Andrew Allan, $20,247; H. G. Burleigh & Bro., Whitehall, N. Y., $9,540; Leonard G. Little, $2,500. The Banque du Peuple at Three Rivers is indirectly interested for $18,199. The total liabilities, as stated at the time are about $200,000, and the asserts are fixed at about $116,000. Among the principal assets are:—Lumber at the Ross Mills, Three Rivers, $13,500; logs and timber on the St. Maurice River, $40,000; laths in Canada and the United States $23,000.

—The freight rates at present are 42/6 to 45/0 from Quebec to London or Liverpool, and probably the same to Glasgow.

—The demand for lumber in Montreal during the month just closed was fairly good, but despite this a rather gloomy feeling prevails regarding the future. Dealers have experienced some uneasiness owing to the imminent danger to which stocks at the Chaudiere were exposed. That material is now, however, practicably out of the millowners' hands, having already been disposed of and being in process of delivery. Supplies at first hands are very small. There has been a fair amount of orders from the country and prices are steady and without change.

NEW BRUNSWICK.

—Messrs. Allan Bros., Carleton, are supplying the machinery for the new lumber mill of Mr. D. J. McLaughlin, being built at Pollet River.

—Messrs. Murray & Shaw, Flat Lands, near Chatham, are building a shingle mill which will be equipped with the newest and best machinery.

—S. T. King & Sons, of St. John, are the purchasers of the lumber business of Mr. E. C. Gates, of Calais. Mr. Charles King, of the firm, will look after the business.

—The Chatham New Brunswick *World* says, spruce logs which were worth but $6 there last year, and no demand for them at that, find a ready sale now at $7, and the supply is not equal to the probable demand.

—Extensive forests fires have been raging in the eastern section of New Brunswick, and doing an immense amount of damage. Immense tracts of forests lands, besides mills, farm houses, barns and standing crops have been destroyed. The town of Moncton had a narrow escape.

—W. H. McLeod, of Richibucto, Geo. K. McLeod, of St. John, Jas. F. Atkinson, of Kouchibouguac, Wm. E. Cleaver, of London, Eng., and John Curran, of New Mills, Restigouche Co., seek incorporation as the "Kent Lumber Company." Capital $80,000 in $100 shares.

MANITOBA AND THE NORTH-WEST.

—P. McLaren's new saw mill at Macleod, Alberta, has been completed and put in operation.

—The capital stock of the Calgary Lumber Company has been increased from $85,000 to $170,000.

—Hunter & Moore have opened their lumber yard, at Crystal City, and have a large stock of building material.

—Cedar shingles from British Columbia are being used extensively throughout Manitoba. They are said to give the utmost satisfaction both as to price and quality.

—Campbell & Stevens have opened a lumber yard at Glenboro', and M. W. Naughton has opened a yard at Killarney, both in Manitoba. J. R. Reilly & Co., have opened a yard at Regina, Assa.

—The ties from the Riding Mountains for the N. W. C. railway have all passed this place on their way down the river. The drive from the mountains which was made in 20 days is the fastest time on record for such a large quantity of timber. There are over 30,000 ties and a lot of bridge timber.

—A bush fire set fire to Mr. Strevel's ties at Stott's Hill near Whitemouth, and before it was stopped 10,000 of them were destroyed. About two weeks previous another lot of 10,000 of the same ties were destroyed. These were the ties once intended for the R.R.V.R., but the Government never took them over. Mr. Strevel, however, claims that the ties belong to the Government; while the Government say they belong to Mr. Strevel.

—We learn from the Edmonton *Bulletin* that the damage to timbers on the head waters of the Saskatchewan and the Athabasca this spring has been very great. The country from the 52nd to the 55th degree of north latitude and from the Rocky Mountains eastward to about the 5th principal meridian contains the available supply of sawing timber of the Northwest. The area of this region is very great, but it was never as densely or as uniformly timbered as the wooded lands of Eastern Canada. The good spruce is in patches with considerable areas of scrub and even open prairie. However, the whole region is so thoroughly cut up by the main streams mentioned, their greater tributaries the Red Deer, the Brazeau, the Pembina and the McLeod, and many smaller branches that the greater part of it is really accessible. Many million feet of spruce well fitted for lumber, which within the memory of man was standing green and growing in the country mentioned is now lying in brule of no use for any purpose, an impediment to travel and furnishing a perpetual supply of tinder with which to kindle and spread new fires. Even within the past five years the loss on known and immediately available timbered lands must have mounted into the hundreds of thousands of dollars. As is well known, in the Northwest series of wet and dry years alternate. During the former the timber is comparatively safe, the only loss arising from local fires in the fall. No matter how dry the weather may be for a time the ground is always moist, and when it is so the fire does not travel far. After a succession of dry years the reverse is the case. The soft mould, full of vegetable matter, becomes thoroughly dry and in the woods even heavy rains fail to wet it. When fire is once started in a section of country having such a soil in such a state it is bound to run through it all. Nothing has ever been done to stop this destruction. The timber destroyed had no market value and no one was interested in it. Now, however, matters are different. Local saw mills are turning the spruce to account in yearly increasing quantities and eastern speculators have seen the bonanza that must be in limits of good timber lying on the headwaters of navigable streams flowing on the lower part of their course through agricultural lands. There is bound to be an influx of immigrants shortly who will need this timber and will cause the loss of every stick to be felt. At the same time the past dry seasons have brought the country in the condition in which it is most liable to fires.

—In a description of the town of Calgary, N. W. T., printed in the Winnipeg *Sun*, the following reference is made to the largest lumber firm in the Northwest: The Eau Claire and Bow River Lumber Co., organized in 1883 with a capital stock of $300,000, is situated at Calgary N. W. T. The company have purchased ten timber limits situated on the Bow, Spray and Kanabaskus rivers, covering an area of 500 square miles, estimated to contain 300,000,000 feet of growing timber, which is cut and put into the rivers and brought to Calgary on water down the Bow river, where they have established the largest sawmill in the N.W.T. They have also in connection with their mill a dam and extensive river improvements, booms, piers, etc., in order to hold and handle the large cut of logs brought down each year. They have for this year's manufacture five million feet of logs, and are in a position to furnish anything in the line of building material, etc.

BRITISH COLUMBIA.

—H. W. Petril is erecting a saw mill at Lilloct.

—John Elwood's shingle mill near Westminster, has been burned out.

—Fader Bros. have bought a disused saw mill plant at Vancouver. They will add machinery and operate the mill.

—The Brunette Saw Mill Company, Westminster, have recently built a 80x30 foot addition to their works, into which $1,500 worth of new machinery will be placed, consisting of a flooring machine, lathing machine, bolter, and a machine for cutting box lumber out of slabs.

AMERICAN NOTES.

—The southern California lumber boom is said to be on the wane.

—It is said that the lumber business in New York is duller than it has been for ten years.

—Duluth expects to receive upward of 500,000,000 this season from the Georgian Bay alone.

—The drives of the Penobscot River and tributaries in Maine aggregate upward of 100,000,000 feet.

—A big hemlock combination has been formed in New York State, to be known as the Pennsylvania Lumber Storage Co.

—The season at Bangor, Maine, opened with high rains and a slack demand for lumber, with prices bordering downwards.

—A Muskegon, Mich., paper reports the local surgeons as saying that accidents in the saw mills are scarcer than ever before.

—A congressman has estimated that there is not less than $700,000,000 to $1,000,000,000 worth of lumber in the forests of Arkansas.

—P. O. Scribner, of Tonawanda, N. Y., has chartered the mammoth lumber barge Wahnapeta for two trips from Lake Superior to that port.

—The Tennessee Lumber Company's property and the Mill Creek Distilling Company's works, Cincinnati, have been burned. Loss, $180,000.

—Hargreaves Bros., & Tripp, lumbermen Detroit, Mich., have made an assignment for the benefit of creditors to Francis G. Russel. Assets $2,274.85; liabilities, $7,072.39.

—Dubois, Pa., a thriving lumber town of about 10,000 inhabitants has been completely wiped out by fire. Over thirty lives were lost and about 4,000 people left homeless.

—Unless there is some unforseen accident, more lumber will be made in Minneapolis this year than in any preceding year. The total cut is expected to run considerably over 300,000,000.

—Wood fiber for paper makers' use is manufactured in twenty-one States. The industry employs $20,000,000 capital and 22,000 men. The State of Maine alone produces 84,000 pounds of ground wood fibre and 188,000 pounds of chemical wood fibre.

—A giant poplar tree, that measured 11 feet 8 inches in diameter at the base, and was 240 feet high, was recently felled near Taylorsville, O. It is estimated that it will yield 20,000 feet of lumber.

—From New York state comes the cry that there is more or less cutting of prices going on. Some Buffalo firms are in the habit of knocking considerable off the price in their strenuous efforts to secure trade.

—A curious freak in the tie trade is reported from Duluth, Minn. Vessels are carrying cedar ties to that port from Sault Ste. Marie for the Manitoba road, and taking back tamarack ties to the "Soo" from Port Arthur for the Grand Trunk. A heavy trade is thus carried on.

—New York City it is said is not demanding lumber as vociferously as it is wont at this season of the year. There has been a slowness in that quarter, that does not seem just natural. Not but that a great deal of lumber is being shipped there, but it is hardly up to the usual standard.

—A Muskegon, Mich., shingle manufacturer stated on Friday to a representative of the *News*, that the output of shingles from the Muskegon mills for 1888 will be at least 100,000,000 less than that of last year. Shingles are averaging better in price than last season, and decrease in the cut will redound to the interest of the manufacturers.

—Figures show that more lumber was sold in Chicago in May than in any month in the history of the market—20,000,000 more than was sold in March, the sales aggregating 229,000,000 feet. Of this total 151,000,000 feet went in local consumption, leaving only 78,000,000 for the out of town trade. A year ago in May the local consumption reached only 34,000,000 feet.

—There is a fairly encouraging tone to the reports regarding the British market for American woods. A steady trade continues in prime walnut logs and lumber. A quiet, steady trade is reported in whitewood, with stocks large in both logs and lumber. Prices fairly maintained. There is considerable activity in American oak. Gum seems to have been deserted, the market being overstocked.

—A resident of Chicago has in his possession a copy of the Ulster county, N. Y., *Gazette*, dated, "Saturday, January 8, 1800," and a sample of the contents is given in the style of the following advertisement, showing that the people of olden times did not notice little incongrugities such as are involved in this ad.:

FOR SALE—THE ONE-HALF OF A SAWMILL, WITH A convenient place for building; lying in the town of Rochester. By the mill is an inexhaustible quantity of pine wood, and also a stout, healthy, and active negro wench. Any person inclined to purchase may know the particulars by applying to JOHN SCHOOMAKER, JUN., at Rochester, November 13, 1799.

The *Courier* says the Saginaw cargo lumber market is dull, but June is invariably a quiet month. No sales of consequence are being reported, but a number of small lots have changed hands. There are no changes in quotations. What demand there is is limited to common lumber. Box stock is firm, and Norway strips sell readily, but bill stuff is dull and featureless. The demand for coarse box lumber seems to be fully equal to any demand for such lumber the valley has ever experinced and contracts are being made at $10.50 and $11 per thousand for green stock. Norway strips are also in good demand; also hemlock strips. While some claim that the demand for good lumber has improved the evidence on the face does not show much of an improvement. The dry lumber is nearly all sold and but very little green is being contracted ahead.

—The manufacture of hemlock in Michigan is increasing rapidly. In the Saginaw valley hemlock, bill stuff and lath are being largely used in home building, while a large quantity will find shipping market. As its use extends people are finding out that it makes a stiffer frame than pine, and is of greater value in all dimension sizes about a building.

Canadian Lumber in the States.

There is a general impression that the presidental elections in the United States will have a detrimental effect on the American lumber market and that in consequence the Canadian lumbermen will suffer to a certain extent.

A reporter visited the Chaudiere this morning with a view to obtaining the opinion of the Chaudiere lumbermen on the subject. The universal statement was as far as this year's cut is concerned almost every foot of it was sold before it was taken from the limits last winter, at fair average prices. It is now possible that the elections may effect the sale of next winter's cut, as the market is at present and will be until some time after the election in a demoralized state. The lumbermen have been expecting this however and many of them have made arrangements elsewhere for the sale of most of the cut for 1889.—*Ottawa Journal.*

QUEBEC TIMBER DUES.

The Quebec Government having changed the system of computing the Crown dues on saw logs from charging by the piece to charging on the 1,000 feet broad measure, several changes in the regulations were found necessary. The following are the most important :

As heretofore licensed holders are bound to furnish sworn statements from their foremen or persons in charge of the number and description of all pieces of timber, saw logs and other wood goods cut under their direction, or to their knowledge upon the berths operated by them the previous season.

In addition to this clause the new regulations provide that license holders shall also provide specifications of measurement sworn to any time after the expiration of the license for the season (30th April), but not later than the 1st day of September, by the cutters duly qualified, whose engagement with the producer shall not previously have been disapproved of by the Crown Timber Agents, as well as an affidavit in corroboration from the proprietors themselves, or their representatives.

As the new table for computing the contents in feet board measure is particularly hard on small logs, the lumbermen had almost fully decided not to take out any logs below 13 inches in diameter. To meet this, however, the new regulations provide that " Parties cutting timber, sawlogs, or wood goods of any kind on Crown Lands, and failing to haul all the wood in the trees cut down, because it may not appear to have a commercial value, shall include the same in their returns, and the quantity may be estimated and the dues thereon charged and payment enforced or otherwise subject to the report of the Forest Ranger." Thus placing in the hands of the Forest Rangers very great powers, which are liable for various reasons to lead to great abuses.

The rate per foot B. M. for saw logs is placed at 30 cts. per M ft. more than the Ontario Government charge, but in reality the rate is full 55 cents per thousand feet more when the difference between the tables prescribed by the regulations and the Doyle rule as shown below is taken into consideration. There is a petition now being prepared to the Quebec Government, protesting against enforcing the new rule and asking the adoption of the Doyle rule which is that which has been in use in Ontario for many years. It is hard to predict the result, but it would be surprising if the Government acceded to it, as they seem determined to squeeze the last cent out of the lumbermen.

The following shows the quantity for logs of each size computed by the new rule compared with the Doyle rule for logs from 7 to 22 inches ; a little attention to which will bear out what has already been said in regard to the difference between the Ontario and Quebec charges.

Saw Logs, 16 feet long.				Saw Logs, 13 feet long.			
Quebec Rule.		Doyle Rule.		Quebec Rule.		Doyle Rule.	
Diameter.	Contents in each piece.	Diameter.	Contents in each piece.	Diameter.	Contents in each piece.	Diameter.	Contents in each place.
7	19	7	8	7	24	7	9
8	26	8	13	8	32	8	10
9	37	9	21	9	45	9	25
10	48	10	29	10	59	10	36
11	54	11	40	11	67	11	49
12	65	12	52	12	80	12	64
13	81	13	66	13	100	13	81
14	97	14	81	14	120	14	100
15	108	15	98	15	133	15	121
16	130	16	117	16	160	16	144
17	152	17	136	17	187	17	169
18	173	18	159	18	313	18	195
19	200	19	183	19	247	19	225
20	227	20	208	20	280	20	256
21	249	21	235	21	309	21	289
22	282	22	263	22	347	22	324

It will thus be seen how largely the new table favors the new government at the expense of the lumbermen and how the latter are totally at the mercy of the former.

WASTES IN LUMBER.

Statisticians have proven that the primitive forest, before touched by the lumbermen, shows less than ten per cent. of actual money producing wealth. Think of a loss of over ninety per cent. in cutting and sawing before economic values are reached. The wanton waste of lumber is often one of the striking features of the camps. In California it is still worse ; only the largest of trees are cut. Those measuring less than two feet in diameter are rarely touched but to ring and subsequently burn. In this country, even with the rare and valuable roots, we leave a large unsightly stump, often the most dense and beautiful part of the tree. Generally speaking, the roots of these trees are not widely divergent nor extremely thick, and it is strange the woodsman insists in cutting off so far above ground.

Apropos of this may be mentioned a little experience of the writer : Two years ago in the usual run of business, an old wood lot came in my possession. One part of this was the remnant of an old walnut forest, being thickly studded with stumps from three to four feet high, and literally strewn with tops and limbs from a foot in diameter down to four inches. Some of these were quite lengthy, but the larger ones were, of course, crooked and scraggy. To make a long story short, these stumps were grubbed out, the tops all trimmed, and the entire lot being taken to the mill, the result being the interior of a new house was almost entirely finished with walnut. All the stationary stands, book cases, wainscoting, stairs, balustrades, and the like, besides much of the furniture was made from this walnut slash, besides which four thousand feet of beautifully grained lumber for special purposes was gotten out, which netted thirty-seven dollars per thousand feet. This one hundred and fifty dollars more than covered the cost of clearing, hauling and sawing, leaving the field perfectly clear and nearly ready for the plow.

Of course the field was a good one ; but, all things considered, I venture the assertion that the aggreate profits from the slash and remains were greater than from the original forest, for the lumber from this particular field was sold in a bunch, mill run, for twenty-five dollars per thousand, and, including first cost of the land, nearly three-fourths of this price must have been exhausted before the lumber was ready for market, proving conclusively that the lumbermen of eight years ago did not hew close to the line. Whether he has learned to hew any closer may be demonstrated by visiting any section where trees, even the more expensive, are being cut. The stumps and tops still cumber the ground, while the manufactories are continually making small pieces from the plank sawed long and wide, whereas the trees would go a great deal farther, and the results would be as good or better by working no closer and down lower, making many shorter cuts, but producing much handsomer grain, as demonstrated in the foregoing. Besides, it should be borne in mind, that these results may be materially enhanced by working at the start. Cutting low, below the ground, means a longer butt cut, always the best of these hard wood trees, and, in connection with the upper cuts, limbs and bends can often be worked into much better advantage than after the main logs are cut.

What is true regarding valuable lumber, applies with all its force, only in a modified form, to all varieties of timber. Any stump that shows unbroken soundness on the top represents a waste in proportion to its height. The peculiar construction of tools, and the nature of the average tree renders it nearly as easy and much more profitable to cut off at the very bottom, and there is no reason why the long, straight limbs should not all be worked up into merchantable goods, and that, too, at a fair profit to producer and consumer.—*Exchange.*

RECIPROCITY AND THE LUMBER TRADE.

VIEWS OF A LEADING LUMBERMAN.

At the ordinary fortnightly meeting of the Commercial Union Club of Toronto, Professor Goldwin Smith presiding, the subject of " the effect of Reciprocity on the Lumber Trade of Canada " was discussed. Much interest was given to the proceedings owing to the presence of a large number of lumbermen, who were in the city attending the annual meeting of the Ontario Lumbermen's Association, some of whom took part in the interesting discussion.

Mr. A. H. Campbell was the first speaker. In introducing Mr. Campbell to the meeting the Chairman said he observed a number of gentlemen present from outside Toronto who were not members of the club. He would take the opportunity of assuring them that, notwithstanding what they might see in party journals to the contrary, this was no party movement. The club addressed itself to what it believed to be for the interest of the whole community. Its members belong to both political parties : Mr. Campbell who was to address them, was a Conservative.

Mr. Campbell then spoke. He said that when the present agitation for unrestricted reciprocity with the United States commenced, the benefits which would accrue to the lumber trade were so great and so manifest, that he feared his judgment might be warped by selfish considerations, and that what might be good for him personally might be detrimental to the interests of the country at large. A full consideration of the circumstances and of the various interests and industries which would be affected convinced him, however, that all the important interests, including farming, mining, stock-raising, with the fishing and carrying trade of Canada, would equally share in the benefits of a free market with a people having a population of sixty millions, and consequently that this movement, he felt, was in the general interests of the whole country. Amongst the most important of our industries was that of lumber. From the lofty tree growing in the distant forest to the finished board manufactured for the varied uses of commerce, it employed the labor of a large number of men and horses, and provided the means of living to many families in the country. He had not the statistics for the export trade from Canada to the United States for 1887, but in 1885 it valued $9,355,736 ; in 1886, $8,545,506, and taking the value for 1887 to be not less than that for 1886, they would have a sum of money far exceeding $26,000,000 in three years. Of that sum about $5,289,308 was paid into the United States treasury in duties, and very nearly the whole of that money would be saved to this country had there been unrestricted reciprocity. Another way in which lumbermen would benefit by Commercial Union was that they could export dressed instead of rough lumber, and by the difference in weight reduce the freight. When the reciprocity treaty existed they had good trade with the States. The year 1866 was perhaps the most prosperous year lumbermen ever experienced in Canada. Since the abrogation of the reciprocity treaty he paid over $350,000 for duty on exported lumber, and he was not a very large operator. The great want in this country now was a market. What made the National Policy a national failure was the want of a market. Under the National Policy instead of chimney stacks marking the country the mills were reducing labor or wages. High protection ever meant over-production, and over-production meant failures, ruin and distress. Commercial Union, or, as he preferred to call it, reciprocity, meant the opening of a market for our products. " Canada for the Canadians " was a great cry at one time, but it seemed to him to have ended as they might have expected, viz., Canadians were living upon each other. Why did England Colonize but to find a market. Why were France, Germany, etc., so anxious to get colonies but in order to have an outlet for their goods. Commercial Union would give them the large market which they needed. Not only would lumbermen be benefitted ; the good effect would reach almost all classes of manufacturers and the farmers. American capital would flow into the country and the country would prosper. What made Maine such a large manufacturing country but that they had a market of 60,000,000 people. He believed our manufacturers were as good business men and more economical than those on the other side of the boundry line. Speaking generally, he was of opinion that about 800,000,000 feet of lumber were cut in Ontario yearly, and only one-third of that quantity was used in Canada.

Mr. Gordon Waldron asked whether a larger market and the investment of more capital would not have the effect of depleting our forests too rapidly ?

Mr. Campbell, in reply, said the greater the demand the more valuable would lumber become, and consequently the greater would be the care to preserve it from fires and destruction. The cry that the country would be denuded of timber was a fallacy. Young trees were always growing, and thinning the forests would facilitate the growth of trees.

Mr. James Pearson pointed out that the increase in the value of lumber, consequent on Commercial Union, would increase the selling value of the limits, and thereby increase the public revenue derived from the sales of timber limits.

Mr. Geo. Kerr, Jr., suggested that the Government should begin at once to plant large areas of land with young trees.

Mr. Thomas Conlon, of Welland, said the inland marine was for the past few years fast disappearing from the lakes. This was a very serious matter, and one reason for it was found in the fact that vessels trading with American ports had often to return without a cargo. Boats took lumber from the Georgian Bay to Chicago, and because of the interpretation put on the American coasting laws they could not load with wheat from Chicago to Boston *via* Collingwood because both Chicago and Boston were American ports. Canadian vessels were not allowed to trade between American ports. There were minerals, copper, granite and marble, which would be developed. Commercial Union was of vital importance to the marine interests as well as to the lumbering interests.

Capt. Wm. Hall, a large vessel-owner, and one of the Vice-Presidents of the Commercial Union Club, endorsed what had fallen from the previous speaker, and gave an interesting account of his own experience and observations in connection with the inland marine trade of Canada. He keenly regretted the circumstances which had long depressed the shipping trade of the country and the disabilities under which owners of vessels engaged in the coasting trade found themselves in consequence of the restrictionist policy pursued by the government. He closed by warmly endorsing the Commercial Union movement and predicting its ultimate triumph.

United States Lumber Dens.

An extraordinary story was told by Mrs. Eben Obenauer, at a meeting of ladies of the Central M. E. Chapel, Detroit, relating to the lumber dens of the north parts of the state. Mrs. Obenauer is a missionary employed in the pineries.

"A fair example of what these places are," said Mrs. Obenauer "is the stockade den at Seney, in the Upper Peninsula. Seney itself is turned against all good influences. Before going I was counseled against speaking there for fear of bodily harm. The minister who had preceded me had been carried bodily from the hall. The town is the headquarters for four large lumber companies, and though there are but twenty-five houses in it thirteen of them are used as saloons.

The dive at the place is surrounded by a high board wall that reaches to the gable of the roof of the house enclosed. Why is the wall needed? Not to keep the lumbermen out, not to keep the women out, but to keep imprisoned the girls whose lives are by compulsion made a continual debauch. Great care is exercised in admitting strangers to the den and everyone unknown must be vouched for. One man gained admittance through the assistance of the groceryman who supplies the place. After leaving the bar room he heard a scream. He turned back and saw, lying prostrate on the floor, with the blood streaming from her mouth, a young woman who had been felled.

In the dance hall of the house he saw eighteen nude women dancing in a circle with the keeper in the centre brandishing a club. This is the state of things throughout the lumber country of Wisconsin and Michigan.

"What is the remedy? The governor of this State, when appealed to refused to meet the issue, dodging it on a technicality. The powers of the State, the officers of this commonwealth, either through fear or cupidity, dare not touch this terrible blot on the State."

Others spoke on the matter, aud it was unanimously resolved to call a mass meeting at an early date. Evidences will be collected giving specific details, and Gov. Luce will again be called on to act.

Lumber Exports in Australia.

The San Francisco *Journal of Commerce* says :— "The lumber trade with Australia forms one of the greatest departments of our business with that country. Except for some of the fine timber of Western Australia, that great island continent may be said to be almost absolutely dependent on importations for that indispensable adjunct of modern civilized life—a good supply of lumber. We ship largely from this city, more largely still from Puget Sound and Humboldt Bay. Out of somewhere about one hundred and thirty millions feet of lumber exported from the Pacific coast of the United States in a year, Australia takes nearly one-half. The exact quantity taken runs from fifty to sixty millions feet annually, and is steadily increasing. Our business with Australia commenced away back in the fifties—in 1853, it forming the bulk of our exports for that year. Puget Sound began shipping to Australia largely as far back as 1856. In 1869 the exports to Australia increased very heavily. The record was even beaten in 1878. It has varied from year to year according to the demands of the colonies and must be much greater in the future than it has ever been in the past."

Prevention Of Boiler Scale.

The scale in boilers is formed from impurities of the water, and if pure water only is fed into the boiler, no scale is formed. This being settled beyond doubt, many methods have been proposed to purify the feed water in a rapid and cheap manner. To prevent scale by the use calcium hydrate and soda, F. Scheukel employs one or more tanks, according to the supply needed for the works, in which the water from the river is purified, and another tank for the purified feed-water. As purifying tanks he uses four iron boxes (or cylinders of old steam boilers), not over 5 feet high, which have an outlet cock about 6 inches above the bottom. They are heated by steam to 60° at least, and are preferable surrounded by some non-conducting material. Besides, they are furnished with a stirring arrangement, preferable a Koerting steam-jet stirrer. The pure water tank is placed on a level below the purifying tank, so that the purified water can flow directly into it from the purifying tanks, without the use of a pump. The water in the purifying tanks is heated as much as possible and the required quantity of thin milk of lime added and stirred ; this quantity being either calculated after the analysis of water or ascertained by experiment. Only so much lime is to be added that red litmus paper dipped into the water, after 15 to 20 seconds begins to turn blue. Then the calculated quantity of pure (96 to 98 per cent) soda dissolved in hot water is added, stirred, and the water allowed to settle. In 20 to 30 minutes the precipitate formed is thrown down in large flakes and the perfectly clear water is drawn off into the feed water tank. With ammonium oxalate it must not give any turbidity ; and if another sample taken becomes turpid on the addition of calcium chloride, too much soda has been used. The advantages of this method of purifying the feed-water are : that the boiler requires no cleaning for a whole season ; that the iron of the boiler-walls is not attacked ; that the water does not froth and stop up the guage-cocks, etc. ; that the steam is free from acid ; that steam is easier generated and thereby fuel is saved ; that no breaking out of scale is required, its cost saved and the interruption of work caused thereby is avoided ; that, finally, the method is compartively inexpensive.

The purification of water by milk of lime and soda is known, but as regards the practical application, the above communication is valuable. The "Pharm Centralhalle," however, remarks that soda is not the cheapest purifier for all calcareous water, but for such as contain considerable proportions of calcium nitrate, besides gypsum, barium chloride would be cheaper to employ.—*Practical Mechanic.*

Don't Do these Things.

Don't open a cock or a valve under pressure, and let steam into cold pipes suddenly. If you do there will be a bill of repairs to pay, to say nothing of the liability of killing or maiming some one for life. A man was employed in a brewery cleaning barrels with steam from the boiler. He opened the globe valve suddenly and blew up the barrel, losing one arm by his imprudence.

Don't suppose that a safety valve is going to think for itself, and don't fancy it is all right because it was tried last month, or last year, perhaps. Try the safety valve daily, and examine it, so as to be sure that the stem is not bent, or that the weight has not been shifted by accident or design.

Don't omit to keep the water guage in good order, and be sure that the openings into the boiler, both steam and water, are not stopped up partially by scale or something lodged in them. Where the openings are of different sizes the water level will not show properly. Test the guage by the guage cocks, and be sure that it is right.

Don't suppose that the boiler is all right internally because it has never blown up yet. Get into it, and see whether it is or not. The man-hole plate ought to come off every week, and the engineer should satisfy himself by inspection that the braces are all right.

Don't forget that the blow cock is a thief which is very apt to run away with a great deal of coal unless it is tight. It should not leak a drop.

Don't be to liberal with oil or fat in the cylinder. Some men are constantly slushing the cylinder with grease, under the impression that it makes the engine run easier. After one or two revolutions all the grease that does not cover the rolls of the cylinder is carried out with the exhaust and scattered over the surrounding country. On a wooden roof this invites fire, and on a metal roof it soon causes leak by corrosion, for fatty acids are the most active of corrosive agents. Use sight feed cups in preference to any other agents ; they not only save attendance, but they feed oil as it is needed—drop by drop.—*Milling Engineer.*

Solid Emery Wheels.

At a meeting of the Polytechnic Section of the American Institute, held Dec. 8th, L. Duvinage, in a paper of which this is an abstract, said that the increased quantity and quality of work that goes out of the modern machine shop was due to the skillful use of solid emery wheels. He said that a grain of sand from the common grindstone magnified, would look like a cobble stone, a fracture of which shows an obtuse angle, whereas a grain of corundum or emery would look like a rhomboid, always breaking with a square or concave fracture. No matter how much it is worn down in use it does not lose its sharpness ; hence it is evident that the grindstone rubs or grinds and heat the work brought in contact with, while the corundum or emery-wheel with its sharp angular grit cuts like a file or circular saw.

There are two general classes of emery wheels in the market—one class of wheels has the grains of emery joined and consolidated by a pitchy material as rubber, linseed oil, shellac, etc. These must run at a high speed to burn out the cementing material by friction, loosening the worn out grains and thus revealing new cutting angles. These are non-porous wheels. Truing up this class of wheels is done with a diamond tool.

The other class consists of two kinds, one made by mixing the emery with a mineral cement and water into a paste, which will harden and bind the grains together ; the other kind by mixing the emery with a mineral flux or clay, moulding into shape and burning in a muffle at a high temperature. These are porous wheels in which the grains of emery are held together by matter having affinity therefore. This class of wheels, unlike the grindstone, has sharp grains of emery bedded together among matter which, in [illegible] cases, is as hard and sharp as the emery itself. Such wheels cut very greedily, and do not need to be run at any particular speed.

The dresser made of hardened steel picks, is the proper tool for toning up this class of wheel.

Manufacturers in metal goods aiming in reducing the cost of production, would do well to look into the adaptibility of the solid emery wheels or rotary file and other labor-saving machinery before deciding on reducing wages of labor. A glance at the first page of this journal will show our readers where all kinds of emery wheels for the different classes of work can be purchased.

New Postal Arrangement.

By the new postal arrangement between the United States and Canada, which went into effect on March 1, 1888, articles will be allowed to go into either country, if admitted by the domestic law of either, except sealed packages (which are other than letters) and publications which violate the copyright laws of the country of destination, liquids, [illegible]

All articles exchanged under this arrangement are required to be fully prepaid with postage stamps, at the rate of postage applicable to similar articles in the domestic mails of the country of origin, and are required to be delivered free to addresses in the country of destination.

Articles other than letters, in their usual and ordi[illegible] on their arrival at the exchange post office of the country of destination, will be inspected by customs officers of that country, who will levy the proper cust[illegible]ties upon any articles found to be dutiable under the laws of that country.

EXCHANGE ECHOES.

Chicago Timberman.

The *Timberman* has hitherto striven to fairly present the views of the advocates and opponents of free trade in lumber by the removal of $2 duty on Canadian manufactured pine. It is a foregone conclusion that the Mill's tariff bill will be modified, and now only serves the purpose of affording a subject for the evaporation of language laden wind. There is one point, however, that has been, to some extent, overlooked in the discussion of free lumber and that is that the removal of the import tax on Canadian lumber will not benefit the consumer over here in the least. The argument all along has been that the removal of this tax would give the Americans cheaper lumber. Does anyone for a moment suppose that this will be the case? On the contrary, the Canadian market will take its cue from prices prevalent over here, and the Canadian lumbermen will at once put up prices to correspond with the American market. They certainly would be fools if they did not, and the generality of them are not built that way. The serious attention of the advocates of free trade in Canadian lumber is invited to mentally discuss the above fact, and ask where the great benefit to the consumer is to come in. *The Timberman* has only seen one advantage in the free introduction of Canadian lumber to American markets, and that was confined to the economizing of our own forests. Outside of this foreign supply to prolong the diminution of our home stock, the removal of the restriction upon Canadian lumber, would not depreciate the price of lumber a mill a thousand.

Detroit Free Press.

The capital employed in sawed lumber in 1880, according to the census, was $181,186,122. The wages paid amounted to $31,845,974 ; and the cost of materials was $146.155,385. The value of the product was $233,268,729 ; and the profits of the lumbermen were $55,267,370, or 30 per cent., and upwards on their capital. The duty is $2 per thousand feet. The lumbermen, like all beneficiaries of the war tariff, stoutly deny that the duty is added to the price ; and if this is so the removal of the duty would not effect the amount of the lumbermen's profits. It may be safely assumed, however, that the cost to the consumer is enchanced by some portion of the duty, though not, perhaps, by the full amount. It may, therefore, be assumed, also, that the cost to the consumer will be reduced by the removal of the duty, though not to the full extent of the duty. The American manufacturer will still have the cost of importation from foreign countries in his favor, and he will take the full benefit thereof. Suppose that the removal of the duty reduces the cost of lumber to the consumer $1.50 a thousand. This on sawed lumber would be about equal to a little over 12 per cent. reduction on the value of the lumber product. On the figures for 1880 as already given it would mean a reduction of $28,313,112 and a net profit in round figures of $27,000,000, or somewhat more than 14 per cent. on the capital invested. What excuse is there in such a showing for any reduction in the present rates of labor, or any threat that such a reduction shall follow the removal of the duty on lumber?

Chicago Lumber.

It becomes apparent as the season advances the lumber merchants at leading points are not, as the phrase goes, climbing over each other in their anxiety to secure stock for their yards. There have been some heavy purchases made, it is true, but when it is possible to get at the bottom of these transactions it is usually discovered that they were made on a basis somewhat more favorable to the buyers than the current prices for bulk lumber at the market. Trades have been heard of in which large blocks of stock have changed hands in the log at fully $1 below the figures which were paid for the same kind of lumber a year ago. Those who are buying heavily are probably getting an average on their purchase of somewhere about this sum below the 1887 prices. This theory of the situation is measurably confirmed by the reported weakness of the great bulk supply point for the east—the Saginaw Valley—where all good stock is from $1 to $2 off from the opening prices. Some of the shrewdest jobbers and most careful observers of the conditions of the trade are convinced that they can supply themselves with about all the lumber they can find sale for at figures that will give them a full dollar difference in their profit accounts if they succeed in making a selling average equal to last year. While there is some doubt as to the latter point, the situation is not hopeless in this respect. Lumber is weak at distributing points, but a strong effort later in the season, after the heavy buying has been done, may enable operators to recover the little ground now lost.

THE FRIENDS OF FREE LUMBER.

In the congressional debate on the lumber schedule in the tariff bill, Messrs. Weaver, of Iowa, and Wilson, of Minnesota, made arguments favorable to free lumber, in which they expressed themselves as follows :

Mr. Weaver—Mr. Chairman, the venerable gentleman from Pennsylvania [Mr. Kelly] and the gentleman from Maine [Mr. Reed] cannot both be right. The gentleman from Pennsylvania appeals to the committee not to destroy the lumber industry of this country. How can it destroy this industry if the other contention of the gentleman be correct that the price of lumber is not increased by the tariff? The gentleman from Maine contends that the price of lumber will not be affected. Then I say what harm is there in placing lumber on the free list?

The gentleman from Maine took good care not to deny that the lumber interests are combined in a "trust" for the purpose of limiting the supply and controlling the prices of lumber. It is not only true—historically true, and I refer gentlemen, to an article in the *North American Review*, by Mr. Lloyd, as far back as 1884, and to a recent work published by William C. Cook, of the New York bar; it is not only true that this lumber interest is engaged in a "trust" to limit the supply, and control the price, but it is also true that they control the local dealers, and require them to sell at a schedule price also.

And, sir, by reason of their further combination with the transportation monopolies, no man can engage in the lumber business without the consent of the Lumber Trust, and the transportation companies, which together constitute one of the most unconscionable trusts ever organized in this or any other country. It is organized for the purpose of plundering the people who are far removed from the great centers of lumber manufacture. I challenge the gentleman to deny before the American people that this lumber industry is engaged in a trust, the object of which is to absolutely determine who may, and who may not deal in lumber, to limit the production, and to control the price—a criminal organization at common law because in the nature of a conspiracy in restraint of trade.

Now, as an appeal has been made in behalf of these "trusts" by gentlemen on the other side of the House, I stand here and make my appeal in behalf of the people of the west who consume this lumber. Let this trust take its clutch from the throats of the people, and quit robbing the consumer. Let them pay some respect to other people's industries, which are just as sacred, and should be as inviolable as their own.

Now, I wish to call the attention of gentlemen to the fact that the law of 1883 also put railroad ties of wood on the free list. The railroads buy them ready hewn in Canada, made by cheap Canadian labor, ship them over here by the million, and thus they obtain cheap ties for their roads. But they are unwilling to treat the people with equal fairness. The same law puts the lumber which my constituents must use in constructing their houses, their granaries, and their barns on the dutiable list at the rate of from $2 to $3 per thousand feet. This is an unmitigated shame.

It is a plain discrimination in favor of the railroads and against the farmers and builders. This bill, sir, in a broad and catholic spirit, treats the monopolies and people exactly alike. It puts the lumber of the poor man upon the free list and at the same time it leaves the railroad tie on that list also.

Mr. Wilson, of Minnesota—Will my friend permit a suggestion? The gentleman from Maine made a point which seemed difficult to answer, but if any one can answer it the gentleman from Iowa can. He said that if this duty were taken off, the lumbermen of Canada, who are not one-fifth as wealthy as ours, would overwhelm us and run us out of the market. How can you answer that?

Mr. Weaver—That overwhelms me. Ask me an easy one. I tremble for my feeble country and her infant industries. Why try to answer such an argument? It is a mere chimera of the brain and wholly absurd. It answers itself.

Mr. Wilson—But I do not wish, Mr. Chairman, to be interrupted.

Allow me to say, sir, in this matter that the property invested in the lumber interest equally in my friend's district and in my locality within the last fifteen years has risen in value to an extent I am sure of not less than 300 to 500 per cent., whereas the property of the agricultural community, who are compelled to pay $2 a thousand feet to support and enrich this lumber interest, has not risen 1 per cent.

These are the facts for our consideration. And yet this tariff law compels the agriculturists, men who purchase from the lumbermen, to pay a heavy tribute to them ; and I repeat that within the last fifteen years this agricultural property has not risen 1 per cent. to match the increase of 300 to 500 per cent. which this protection has afforded to the lumbermen. It is time that this condition of things was brought to an end. It is time that we stopped making these poor men support the millionaries. To keep up any longer this state of things is simply to legalize injustice, and although some of my best friends in the world are manufacturers of lumber I cannot vote to sustain this condition of things.

From remarks of Mr. Outhwaite, of Ohio. Take the state of Maine ; total value of sawed lumber, $7,933,868 ; total value of materials $4,951,957 ; and this estimate of material is, of course, at the high price that the manufacturers adopt as their estimate. Take the one sum from the other and you have remaining $2,981,911. From this subtract the amount of wages paid and divide the remainder by the capital, and it gives you 28½ per cent. on the capital invested. Take the number of employees engaged in that business, and divide that into the total wages paid, and you get as the wages paid to a lumberman during one year $170. In other words, Mr. Chairman, a man working during the year in this business in the State of Maine gets for his subsistence $170, while the capitalist upon every $1,000 invested gets a return of $285. Is not that a spectacle to show how protection benefits the laborer?

From the same page let us read the figures of the State of Michigan. The amount of wages paid there, as shown by a similar calculation, is in the lumber business $305 per year, the percentage upon capital invested is 33.7. In other words the laborer during the year gets $305, while the capitalist upon each $1,000 invested gets $337, or $32 more than the other laborer receives.

Mr. Reed—That portion of our lumber which is not produced in the United States is obtained solely from Canada. In the United States twenty-four thousand million feet of lumber are cut ; the proportion imported from Canada is only about 2½ per cent. and it would be very difficult to make it 10 per cent., under the most favorable circumstances. Now, I do not expect to effect many of the members on the other side by the consideration I am about to submit ; but I do say to them that if they were business men, with business education, they would see at once from these figures that there is no possibility of lessening the cost of lumber and material for houses by letting in Canada lumber. The sole effect of it will be that there will be just so much added to the price of Canada lumber, just so much added to the price of Canada "limits." This bill does not touch that ; and the result will be that whatever amount of money may by reason of this bill fail to go into the treasury of the United States will go into the pockets either of Canadian subjects or of American subjects who have had the wisdom to purchase lands in Canada—except on the Pacific coast, where, by competition with Chinese labor, it is quite possible some damage may be done to the American industry.

SAWDUST TURNING INTO SOIL.

Did any of *The Timberman* readers ever make a study of sawdust turning into soil? Doubtless many have, in some measure, given the idea a passing thought, but have not watched the action of nature in resolving back again into its original elements the capital she had lent out over a thousand years ago, to build up the stock in trade of a pine tree. The study is one of engrossing interest, and its results are well worthy of a brief notice in these columns. Twenty-five years ago, East Saginaw, Mich., was a scattering hamlet, built here and there among and along the edges of swamps and bayous, bordering the Saginaw river. The sawdust and debris of the mills were used to fill up these inequalities, more for the purpose of getting rid of the annoying accumulations, than for any well defined knowledge of the value of such material, or its possible use as a future soil. From year to year the work went on. The swamps and bayous were filled up, and soil was spread on top of the sawdust of variable thicknesses, from sixteen inches to two feet. Strange, as it may seem, there was no settling of the ground, and heavy buildings were erected upon the soil thus made. These buildings are the best in the city, and show no cracked walls. Sewers are dug through what was formerly a bed of sawdust, and while traces of the original material can yet be found, still there is a clear evidence of the transformation process going on, beheld in each shovel of matter thrown out. It would be difficult to fully and clearly explain this process. It looks as though the exudations rising up from beneath the over-lying debris are continually acting as distilling elements, by which the granules of sawdust gather to themselves earth incrustations, and finally become a homogeneous conglomeration of original soil without undergoing the action of decomposition. This hypothesis may not be any clearer than mud, but it is certain that one of the finest and most substantial cities in Michigan, rests secured today on a bed of sawdust, which latter has resolved itself back into its original elements within a quarter of a century. Can any one account for this?—*Chicago Timberman.*

MIDLAND'S NEW PLANING MILL.

At the head of our beautiful bay, says the Midland *Free Press*, stands the most complete and best arranged planing mill in the Dominion, being built after the style of A. S. Mariam's mill of Quincy, Ill., which is considered one of the best in the United States. Messrs. Paterson & Hall commenced to build on the 9th of April and will have their mill ready for work this week. The main building is 20x54 ft. stone foundation, sides and roof covered with iron and practically fireproof. The engine house 30x32 ft. is built of stone and covered with metallic roofing. Adjoining the engine house is a shaving vault also of brick and stone, capable of holding three days shavings, and in case of fire can, by pipes from the boiler, be instantly filled with live steam, one of the most effective agents to extinguish fire. The machinery consists of a double cylinder Lightning Matcher, capacity from twenty to thirty thousand a day. One No. 0 Sticker, capacity 10,000 lineal feet per day. One 26 inch Double Surfacer capacity ; 40,000 feet. One Re-Sawer, and one Gang Rip, capacity 20,000 feet. The Re-Sawer was manufactured by an American firm. and the rest of the machinery is of Canadian production. To each machine is attached an automatic indicator which measures the lumber as it passes through. The boiler is made of steel 54 inches by 12 feet and 54-horse power. The engine is 12 x20 cylinder, slide valve, and about 45-horse power. Engine and boiler were manufactured at the Toronto Engine Works. The shafting, with patent adjustable hangers, is all under the floor as a precaution against accident, as it does away with over-head belting ; the pulleys are known as the Dodge wood-split pulleys and are considered the finest made. The mill will be kept clean by a large Sturtevant fan, which by means of exhaust pipes, carries all refuse direct from the machines to the shaving vault, from which it passes through a hopper bottom and is deposited convenient to the furnace door. The dock in connection with this mill is 200 feet long and 45 feet wide, and after the dredging is done vessels may load or unload at the end or either sides. A system of live rolls worked by a chain gear will run down the centre full length of dock, and convey the lumber to the planers as it is sorted. After passing through the machines the lumber is conveyed by rolls into cars on their own siding, or in case cars are not ready it is passed across the track to a large shed where it is protected from the weather for the time being. The object Messrs. Paterson & Hall have in view in erecting their mill here is to supply the Ontario market with every description of dressed lumber and moldings and their enterprise will prove a boon to the builders of Toronto and other large places, but more especially to those contractors who do not own planing mills. It is the intention of this firm to introduce into this country the long leaf yellow pine of Georgia, which makes a very handsome finish for buildings, and will be brought here by vessels from Chicago, but the principal part of the lumber handled will be cut in the mills of the Georgian Bay. It is expected that the mill will dress about 8,000,000 feet annually, but the proprietors will handle two or three million feet besides. The foreman of the mill, Mr. Wm. Pratt, has the reputation of being one of the best planing mill men in Canada, and was formerly employed by Withrow & Hillock, Toronto. The mill will be running shortly and as they have a stock of 1,000,000 feet of seasoned lumber on hand, parties ordering can rely upon prompt shipments.

[SUCCESSORS TO BOWDEN & CO.,]

SOLE CONSIGNEES OF SOUTHWICK'S CELEBRATED LUBRICATING OILS & GREASES.

We beg to advise our customers and the trade generally that having succeeded BOWDEN & CO. in this business, we shall by close attention thereto, endeavour to merit a still larger patronage than has been accorded to them in the past.

Our goods, the customers being the judges, are not equalled in the market and will continue to maintain the high position they now occupy, our aim being to still conduct the business on strictly legitimate principles.

With thanks for past favors and the request for their continuance, we are,

Yours very truly,

ONTARIO OIL CO.

ARTHUR GOODBY, Manager.

NEW WATER JACKETED

CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST,

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

Dimension—2x4 to 8x8, 12 to 18 ft. long, $14; do. 10 and 20 ft. long, $15; 2x10 to 12x12, 12 to 18 ft. long, $15; do. 10 and 20 feet long, $16. One dollar per M advance on each 2 feet over above lengths up to 24 feet long. One dollar per M advance on each inch over 12 inches in depth. Boards—1st, common, rough, $15.50, dressed, $16.50: Culls, rough, $10, dressed, $11; common, stock, 12 in. rough, $18, dressed, $19; do. 8x10 in, rough, $17, dressed, $18; second common, 12 in. rough, $16, dressed, $17; do. 8x10 inch, rough, $15, dressed, $16. Shiplap—10 in. $17, 8 in $16.50. Siding, ceiling and flooring—1st, 6 inch, $31; 2nd, do. $26; 3rd, do. $20; 4th, do. $17; 1st, 5 inch, $31; 2nd, do. $26; 3rd, do. $19; 4th, do. $16; 1st, 4 inch, $31; 2nd, do. $26; 3rd, do. $18; 4th. do. $15. $1 per M advance for dressing on both sides. $1 per M less for lengths 10 feet and under. Bevel siding—No. 1, 1st siding ½ in. x 6 in., $20; No. 2, do. $17. Stock—B, $35; C, $30; D. $25. Clear, 1 inch —1st and 2nd, $32; 3rd, $28; 1 1-4, 1½ and 2 inches—1st and 2nd, $40; 3rd, $35; selects, $30; shop, $25. Mouldings—Window stops, per 100 feet lineal, 75c.; parting strips, do. 50c.; ¾ round and cove, per 100 feet lineal, 60 cents. Casing—4 inch, O. G., per 100 feet lineal, $1.50; 5 in. do., $1.75; 6in. do $2; 8 inch, O. G., base, $3; 10 inch, do. $3.75. Lath, $1.75. Shingles—1st quality, $3; 2nd do. $2.50; 3rd do. $1.50.

MANITOBA MATTERS.

[Correspondence M. V. Lumberman.]

WINNIPEG, June 11th.—The city lumber firms report an active inquiry for lumber from all over the province, and it is now certain that business will show an improvement over any year since probably 1882. Stocks were exhausted before the mills commenced cutting, and orders are now well ahead. Most of the Lake of the Woods mills had logs on hand held over from last season, and they were thus enabled to get to work early this spring, and have been pushing operations as fast as possible since. The season will therefore be an active one on the lake. On Lake Winnipeg operations have been greatly retarded by the very backward season. The ice has held solid on this lake to an unusually late date, and it is only now that navigation may be said to have fairly opened. This will render the season for cutting very short, so that the mills will be pushed to their fullest capacity, and no time will be lost in conveying the lumber from lake ports to Selkirk. The Lake Winnipeg boats will therefore have a busy season.

A meeting of the Northwest Ontario and Manitoba Lumber association was held at Norman, Lake of the Woods, recently, to consider the advisability of continuing the list prices. This association was formed last fall, for the purpose of establishing prices. Previous to that time the lumber trade here was badly demoralized, owing to the excessive stocks and cutting prices. It was considered that the time was opportune to put the business on a better basis, as surplus stocks had been pretty well cleaned out, and a generally firm feeling prevailed. After a good deal of preliminary skirmishing, the association was formed and a price list was arranged, which was to continue in force to the present month. The arrangement has been adhered to, and dealers have found business more satisfactory in consequence. At the last meeting of the association, it was decided to continue the list prices, no change of importance having been made.

A movement was on foot to erect a large saw mill at Brandon, Man., this season, but it will likely now be abandoned, as an attempt to get logs down to that point has probably ended in a failure, at least for this summer. The logs were cut in the Riding Mountains country, claimed to be the best spruce timber region in Manitoba. About 28,000,000 feet were taken out, and floated down the Bird Tail creek as far as Birtle, but it has been found impossible to get them any further. The failure is very annoying, as only a few more miles would have brought the logs to the Assiniboine river, where there would have been no further trouble from low water. It is possible that a mill may be erected at Birtle, where the logs now are, for the purpose of sawing them up. There is a mill at present at Birtle, but the logs have passed the rapids below this mill, and could not conveniently be taken back. Besides the mill is rather antiquated, and could not be worked to advantage.

In railway construction, there are now three roads being built in Manitoba. The Manitoba & North-western company has just completed a contract for an extension of about twenty five miles, and work has been commenced. The Northwest Central has fifty miles of its line under construction, running north-westward from Brandon. The Red River Valley road, which will connect Winnipeg with the Northern Pacific at Pembina, D. T., is also being pushed ahead once more, and will be soon completed. Fifty miles of road between Winnipeg and Portage la Prairie will also be built this summer, but work has not yet commenced. None of these roads are of any special benefit to the lumber trade, beyond the usual advantage accruing to the trade from railway construction. It is also probable that a short link road will be constructed along the river front, through Winnipeg, to connect the Red River Valley and Canadian Pacific railways. This road would be of great convenience to the saw and other mills and factories along the river front. There is another proposed road, however, which is attracting great attention here at present, and which is of special interest to the lumbering industry. This is the Winnipeg and Southeastern, which it is proposed to construct from Winnipeg in a south-easterly direction to the Minnesota boundary, in the neighborhood of the Lake of the Woods. This would tap the timber region of the lake with a direct and much shorter road than by the present Canadian Pacific railway line to Rat Portage. Mills could be established on the southern end of the lake, and in addition to the shorter railway haul of the lumber to the city, there would be a considerable saving in towage. At present the logs come from the territory principally to the south and east of the lake, and mills established in that locality would be considerably nearer the timber region than the present mills, which are all located on the extreme northern end of the lake. The proposed Southeastern is intended to connect at the boundary with a road from Duluth. Duluth is very anxious to secure a direct line to Manitoba, in order to share in the rapid increasing grain trade of the province, and the people here are equally anxious for a road to Duluth. Such a road could run through the most valuable timber country in Minnesota. Monopoly having been abolished there is now nothing to prevent the construction of such a railway into Manitoba, and the scheme is looked upon here as one of the most likely and important railway enterprises yet proposed. If the Duluth people can succeed in pushing their end of the road through, there will be little difficulty in building the Manitoba portion.

Wood Fiber for Paper.

The extent of the manufacture of ground and chemical wood fiber for paper makers' is not appreciated by those who have not investigated this industry. Certainly the Democratic members of the ways and means committee who have put this manufactured product on the free list, in the face of the fact that the duty now is only ten per cent—less than it ought to be to protect the industry from Canadian and Norwegian competition—could not have fully understood the justice of such a step.

From a statement presented to the House by congressman Dingley, it appears that wood fiber is manufactured in 21 States. The capital employed is about $20,000,000, number of men employed 22,000, tons of fiber made 225,000 ground wood and 112,500 chemical wood, value $12,375,000, cost of wood on the stump $1,235,000, and the remainder of the cost largely labor.

In Maine alone there are 84,000 pounds of ground fiber made daily. The ground wood fiber is made as follows:—

Androscoggin Pulp Co., Brunswick	[illegible]
Indurated Fiber Co., North Gorman	[illegible]
Alvin Record & Sons, Livermore Falls	[illegible]
W. R. Shurtleff & Co., Skowhegan	[illegible]
J. S. Clapp, Snow Falls	[illegible]
Sebago Co., South Windham	[illegible]
Kennebec Fiber Co., Waterville	[illegible]
Total	[illegible] Pounds.

The daily production of chemical wood fiber in Maine is as follows:

Poland Pulp and Paper Co., Canton	[illegible]
Somerset Fiber Co., Fairfield	[illegible]
Penobscot Chemical Fiber Co., West Great Works	[illegible]
Lincoln Pulp and paper Co., Lincoln	[illegible]
S. D. Warren & Co., Cumberland	[illegible]
S. D. Warren & Co., Yarmouthville	[illegible]
Poland Pulp and Paper Co., Mechanic Falls	[illegible]
Total	[illegible] Pounds.

The production and use of mechanical wood fiber began about 1868, and within a few years has rapidly increased. All the patents have expired except those on a recent process known as sulphite. The fiber has been greatly reduced in value, ground wood now bringing only 1¼ cents per pound, and chemical 3½ cents. The cost of paper has been reduced from nine cents before the war to 4½ cents, in consequence of development of the manufacture of wood fiber.

Before 1883, the duty on imported wood fiber, which is made in Canada, Norway, Sweden, and Finland, as well as in this country, was 20 per cent. In 1883 the duty was reduced to 10 per cent., and since that date foreign competition has increased. In 1886 there were imported 18,000 tons, in 1887 the importations were 32,000 tons, and this year 53,000 tons will be imported. If wood fiber should be placed on the free list, as proposed by the Mills bill, our wood pulp mills would be speedily swamped by Canadian and Norwegian competition, as the labor only costs half as much in these countries.—*Lewiston Journal.*

EUROPEAN NOTES.

—There has been good arrivals of pine and spruce deals at Liverpool from Quebec of late.

—The latest London wood circular to hand reports that none of the present season's Canadian timber is yet to hand in that market, and consequently no retail business, landed stocks being practically exhausted.

—Stave buyers are falling into line with other seccions of the timber trade as far as auctions are concerned, and sales to furnish them with supplies are getting to be almost as regular as those provided for the other branches of the same trade.

—Simson & Mason, of London, in their latest circular, say: The market would seem to be open for all classes of fresh Canadian timber, if the scarcity of stock here is any index. The principal delivery has been 400 loads birch. Fresh ash and birch of good size and quality will meet with a ready sale. Oak timber is also wanted.

Sales of Canadian Timber.

Note of Messrs. Singleton, Dunn & Co.'s public sale at Yorkhill, Glasgow, 6th June, 1888:

1st QUEBEC PINE DEAL ENDS.

88	6/8 x 12/23 x 3	2/3

QUEBEC RED PINE DEALS.

551	12 x 11 x 3	11d.

The most important items in the import list for the past week, besides several large consignment of pine deals by the regular liners from Quebec and Montreal, are two large cargoes of sawn and hewn pitch pine. The market could have easily done without these, but there they are and they must take their chance with others who have come before them. The stock of pitch pine is more than ample, the demand being very slack indeed.

—The official returns of the import of wood goods for the month of May at the port of London, go to show that there is a decrease of 17,909 loads of hewn timber as compared with last year for the same month, and a still more noticeable decrease in the quantity for the five months as compared with 1887. On sawn timber the decrease is much larger, amounting to 117,995 loads; the decrease from Sweden and Norway being especially heavy; Russian and United States sawn wood importation is also not much more than half what it was last year. In staves there is a small decrease on the month, while mahogany shows an increase.

—An active trade continues in American whitewood and a large distribution continues to be made, while prices are fairly maintained.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Post Office etc., Pembroke, Ont.," will be received at this office until Friday 6th July, 1888, for the several works required in the erection of Post Office at Pembroke, Ont.

Specifications and drawings can be seen at the Department of Public Works, Ottawa, and at the office of U. H. McKimm, Collector of Inland Revenue, Pembroke, Ont., on and after Friday 22nd June, and tenders will not be considered unless made on the form supplied and signed with actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.

Department of Public Works, Ottawa, 20th June, 1888.

FOR SALE BY AUCTION

— ON —

Friday, 6th July, 1888.

VALUABLE TIMBER LIMITS,

THE PROPERTY OF

HAMILTON BROTHERS

— IN LIQUIDATION. —

W. H. LEWIS, Auctioneer.

Will offer for sale by auction at OTTAWA CITY the following Timber Limits, comprising on

Dumoine River and tributaries,
Black River and Schyan River,
All in the Province of Quebec,

751½ SQUARE MILES

with large and well cultivated farms, general plant, supplies and stock in connection therewith; and on

Gatineau River and tributaries,
in the Province of Quebec,

934½ SQUARE MILES

with farms, plant, supplies, etc., etc. Plans of above limits can be seen at Government Crown Timber office, or Hamilton Brothers' office, Sussex street, Ottawa city. Immediate transfer of above on sale being effected.

ALSO, with possession, say, the 1st December next, the property known as the Hawkesbury Mills, owned by the above firm, and used for manufacturing timber from above limits; situated on the Ottawa River, in the Province of Ontario, midway between Ottawa and Montreal, consisting of four saw mills and lath and scantling mill additions, driven by water, with sawing capacity of over

2,000,000 Feet Weekly,

blacksmiths', fitting, wheelwrights', and carpenters' shops, etc., etc., etc. Extensive wharves and piling space for forty million feet of lumber. Large brick dwelling house with extensive grounds; ditto stone house, and seven good houses built of wood, and one hundred tenements now occupied by employees.

Valuable farm in the vicinity of over 1,000 acres, a large portion of which is covered with excellent timber. For terms of sale plans of properties and all particulars apply to Mr. Chas. Magee, Ottawa.

WANTED AND FOR SALE.

Announcements in this department will be inserted at the uniform rate of ten cents per line, each insertion, payable in advance. For three or more consecutive insertions of the same advertisement a discount of 25 per cent. will be allowed. Eight words should be counted as one line.

DRY LUMBER FOR SALE—30 M 1¼ IN. maple flooring for sale, 10 M 3½ in. maple, 15 M 1, 1½ and 2 in. elm. Box 60, Uxbridge.

CHEMAINUS SAW MILL, B.C.—FOR SALE—a saw mill; nearly new; fully equipped with water-power and steam-engine, a powerful steamer, scows, large real estate and timber leases; also hotel, store, manager's and workmen's houses; capacity 50,000 feet per day. Apply to Croft & Angus, Victoria, British Columbia.

FOR SALE—CHANTLER'S MILL—SHINGLE and lumber mill; never been run, owing to death of owner; will be sold cheap, and liberal terms will be given; good chance for party with small means; this mill is situated five miles from Bracebridge, on Lake Muskoka; logs can be had from any point on the lake with excellent booming ground. Apply to S. C. Kanady & Co., 18 Wellington east, Toronto, or G. W. Taylor & Co., Gravenhurst, Ont.

ATTENTION, LUMBERMEN—FOR SALE—at a sacrifice—new saw mill and one thousand acres pine timber; Parry Sound district. Geo. Coote & Son, Dundas.

SAW MILL—IN WESTERN TOWN—WITH woodworking machinery, mostly new; suitable for furniture or planing mill; a bargain; lithograph of buildings and particulars on application. Box 504, Globe office, Toronto.

TO MILLERS, LUMBERMEN AND OTHERS having capital awaiting good investment; splendid chance to purchase A 1 patent process flour mill, together with saw mill and timber limits on easy terms. Apply for particulars to Drawer 9, Minnedosa, Manitoba.

FIRST-CLASS LUMBER AND SHINGLE mill doing large trade; also, timber limit and large number of logs; for Toronto real estate. J. Huggard, 162, Dundas street, agent

A LARGE PLANING FACTORY—WITH lots of power—adjoining our summer storage yard. William Leak & Co., Dundas street, Toronto.

1,000,000 — FOR SALE — ONE million lath. F. O. B. cars at Gravenhurst. Donogh & Oliver, Lumber Dealers, Toronto.

FOR SALE—STEAM SAW MILL—IN GOOD repair; Lowmoor boiler, 30 h.p., and inspirator; engine 25 h.p., saw rig and carriage, edger, butter, shafting, belting, saws, patent canter and bull wheel; would take part lumber or city lots. Box 60, Uxbridge.

LUMBER INSPECTOR WANTED—IMMEDIATELY—one thoroughly up in inspection of pine and hardwood lumber, and who has a good general knowledge of the business. Apply by letter only to T. W. Walker, No. 4 Imperial Bank Buildings, Toronto.

TIMBER LIMITS FOR SALE,

TIMBER LIMITS FOR SALE IN ONTARIO, Quebec and Manitoba. W. J. FENTON & Co., 50 Adelaide Street, East, Toronto.

FOR SALE CHEAP.

A WATRPOWER CIRCULAR SAW AND Shingle Mill with ten acres of cleared land, log house and stable situated on South river, about 4½ miles from Trout Creek Station on the Northern Pacific Junction R. R., convenient to School, Church and Post Office and s large settlement in Hainsworth. Also about 30,000 feet of dry Hardwood lumber, cut and piled about two years, and about 50,000 feet of Hardwood sawlogs, principally Birch. If not sold sooner, will cut to order this coming summer. For information apply to

THOMAS CORKERY,
Barrett, Ont.

SAW MILL FOR SALE.

FOR SALE, IN THE VILLAGE OF BELmore, Sawmill in first-class running order. Will be sold with or without stock. For terms, apply to

H. R. PERKINS,
Belmore, Ont.

PINE TIMBER LIMITS FOR SALE.

Two choice Timber Limits in Northwest Territory, Canada, 100 square miles each; great bargains. Also, limits in Georgian Bay, Algoma and Muskoka districts for sale. JOHN SCULLY, Toronto, dealer in Pine Lands and Lumbermen's plant and supplies. Light iron and steel rails in stock.

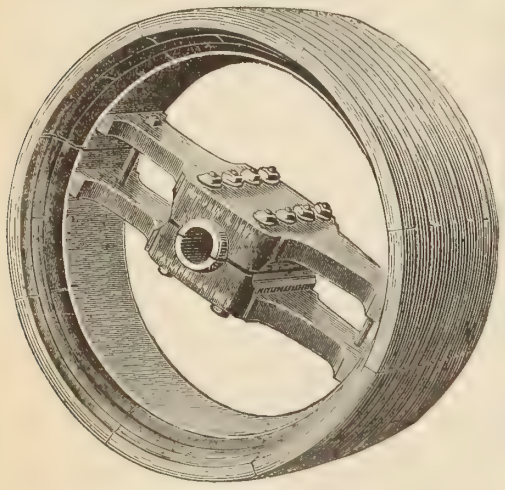
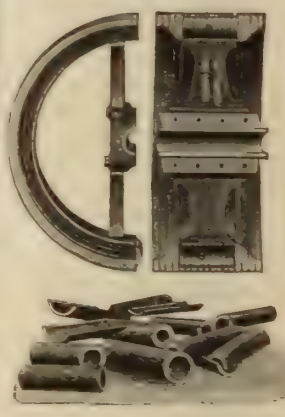
DODGE PATENT WOOD SEPARABLE OR SPLIT PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42
.30	2.43	1.69
.40	3.26	2.02
.50	4.38	2.41
.60	5.88	2.87
.70	7.90	3.43

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

The Dodge Wood Split Pulley Co., 89 Adelaide St. W., Toronto.

THE CANADA LUMBERMAN.

VOLUME VIII. NUMBER 8. PETERBOROUGH, ONT., AUGUST, 1888. TERMS. SINGLE C

THE CANADA LUMBERMAN

PUBLISHED MONTHLY BY

ARTHUR G. MORTIMER,

OFFICE: SIMCOE STREET, PETERBOROUGH, ONTARIO.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

FROM advices received by the Government it appears that the Judicial Committee of the Privy Council expressed the opinion that the Dominion Government should be a party to the appeal of the St. Catharines Milling and Lumber Company v. the Province of Ontario. This suggestion has been acted upon and the Government will shortly appoint counsel to represent it in the appeal.

MESSRS. ECKARDT, KYLE & CO., wholesale grocers of Toronto, realizing the purchasing capacity of the great lumber trade of Canada in all staple lines of groceries, have contracted with THE LUMBERMAN for advertising space. Their first announcement appears on another page of this paper, and we have much pleasure in directing attention thereto. This firm is well known throughout Canada and has a reputation for upright dealing second to none.

IT was said not very long ago that a squirrel could travel from St. Petersburg to Moscow without touching the ground, and there are still immense forests in Russia. But even there, in some districts, the axe has been too busy. The navigation of the Volga and other rivers has been impeded by their being silted up with sand set free by the denudation of the forest. On account of this and other evils the Ministry of Imperial Domains has issued strict orders controlling the tree felling and checking the destruction.

WE particularly invite the attention of LUMBERMAN readers to the advertisement in the current issue relative to the sale of the Hawkesbury Mills property and plant, belonging to the estate of Messrs. Hamilton Bros. The executor of this estate Mr. Caledon F. Gilder, will receive tenders for the purchase of this property up the 7th inst. The logs spoken of in advertisement are first class stock and as good as any yet taken out on the Ottawa. There is but little doubt that the competition for this property will be keen.

THE terms of the new agreement between the mill owners and the Government in regard to the lease of the water-power at the Chaudiere have not yet been decided upon. Mr. Bronson, M.P.P., is reported as saying that the position of affairs had not advanced at all, and that the mill owners were waiting to see what action the Department of Public Works would take in regard to the proposals made. Mr. Bronson thinks that the examination of the Ottawa river now being made will last pretty well all the summer and into the fall.

THE prospectus for still another United States lumber paper has reached us. This time it hails from the far south, New Orleans, La. It will be known as the *South-Western Lumber World*, by the Lumber World Co., publishers. The first issue of the new journal is announced for the 15th inst. and will be a monthly issue. It will be especially devoted to the lumber interests of the South-west, a field fast coming to the front as an important lumber producing point. While we think that the United States is overflowing with lumber literature, we nevertheless extend our best wishes for the success of the new aspirant for public favor, hoping it will have a long and prosperous existence.

THERE is to be an International Marine Conference and the New York *Tribune* thinks that it should take in hand the case of such monsters as the Joggins raft. Our contemporary fears that one successful experiment might lead to ocean rafts becoming a constant danger to steamships and call upon the conference to take action to check the practice before it becomes established. Certainly a solid mass of timber 600 feet long, 53 feet wide and 38 feet high, containing 22,000 logs, would be an awkward obstacle in the way of the largest and strongest steam ship. The experiment is soon to be tried now and another failure, which is anticipated, would probably put an end to the project.

WHILE every business man realizes to a greater or less extent the existing closeness in the money market and the consequent depression in trade, especially throughout Ontario, it is nevertheless a fact that no time in the history of the Dominion has our national credit been rated so high as it is at the present time. The Dominion loan of four millions sterling at three per cent, has resulted most satisfactory. The tenders recently opened in London numbered about 400 and amounted to about twelve millions sterling at prices varying from 94½ to 95½, which was the minimum. So numerous were the high priced tenders that those at 95 only received 34 per cent. of the amounts applied for, while those above 95 receive the full amount. The average price obtained was 95 1-20 per cent.

THE improvements that are being made by the Dominion Government at the mouth of the Fraser River in British Columbia seem to have given an impetus to the lumber trade in the neighbourhood of New Westminster. We hear of large vessels coming up the river to the mills to load with lumber for Australia and Mexico, and the lead thus given is sure to be followed. New mills are going up and preparations are being made for others, some of those interested being lumbermen from Ontario and Quebec, among them being Mr. McLaren and Mr. Ross, and besides the export trade and the local requirements there is also a considerable demand for Pacific Coast lumber from the prairies on the other side of the Rocky Mountains. This demand must certainly increase and there is a bright future before the lumbermen of British Columbia.

SINCE the opening of navigation, says the Chicago *Timberman*, there has been a continuous running back and forward between this country and Canada, of capitalists in quest of pine. The Spanish river country has been honored recently by the presence of Mr. George Simpson, of Evanston, Ill.; Jas. S. Smith, of the Chippewa Lumber & Boom Company, Eau Claire, Wis.; L. H. Brown, Buffalo, N. Y., and Chas. Marthinson, of Grand Rapids, Mich., and rumor has it that these gentleman are acting in concert in the purchase of a big tract of pine—a purchase involving an outlay of half a million of dollars. The Spanish river pine is said to be large, and of fine quality, and will doubtless bring a good price in the stump from this time forward. Several Minnesota operators are said to be at the present time negotiating for a round block of pine on the Spanish river.

THE following striking item appears in the dispatches from Washington in the leading American papers, under date of June 15th: "The Post Office Appropriation Bill was taken up, amended and passed. Among the amendments agreed to is the inserting an item of $800,000 for more efficient mail service between the United States and Central and South America and the West Indies." This is practical evidence of the manner in which the Americans regard the [illegible] of this market. Many of the metropolitan papers of Canada as well as some of the most influential business firms have of late strongly urged the Canadian Government to take some action towards securing these important markets for the benefit of our manufacturers. It is to be hoped that the proper steps will now be taken to counteract this enterprising action at Washington, and save this valuable market to our Dominion before it is too late.

THE French Department of Agriculture has recently issued statistics of the forest lands of Europe, showing their distribution. Two-elevenths of the area of Europe is said to be covered with forests, though the average varies greatly in different countries. Of the British Islands only four per cent. of the surface is woodland. Denmark, Holland and Portugal have a rather larger proportion. In France the forests extend over one-sixth of the surface, in Norway nearly a fourth and Hungary nearly a third. In Russia forests cover nearly two fifths of her area, and Sweden, which stands at the top of the list, is still nearly the two-fifths. Evidently there is no probability of an early cessation of the competition of those countries with Canadian lumber. Taking the proportion of forest land to population the United Kingdom has an acre to eleven inhabitants, Denmark and Portugal are three times as well off, France seven times, Russia and Sweden about a hundred times, and Norway a hundred and twenty times. The forest statistics of Canada cannot be compared with those of Europe, for our woodlands have not been surveyed and estimated with any accuracy. The Governments interested should see that this is done for the information would be valuable.

THE San Francisco *Journal of Commerce* gives some particulars of the lumber trade of the United States Pacific Coast with Australia, showing the great importance and huge dimensions of the business. It says that there are not only large shipments from San Francisco but even greater from Puget Sound and Humboldt Bay. Australia takes nearly half of 132 million feet of timber exported in a year from the Pacific Coast of the United States. The export to Australia is from fifty to sixty million feet, and is still increasing. The business began to assume large dimensions as long as thirty-five years ago, with especially large increases in 1877 and 1878. The San Francisco *Journal* anticipates that the trade will be far greater in the future than ever it has been in the past. We hope our Pacific Coast contemporary is a little too sanguine. There is no good reason why its countrymen should monopolize this trade. In British Columbia we have forests from which Australia might well draw her supplies of lumber. These forests are practically inexhaustible and for quality they could not be excelled. Our lumbermen on the Pacific Coast should see that they are not left behind in the race. All that is needed is to see that the peculiar requirments of the Australian market are carefully observed.

THE action of Dr. DeGrosbois, M.P.P., in bringing in a bill in the Quebec Provincial Legislature to repeal the charter of the Quebec Ship Laborers' Society has had a useful effect. That society was originally formed as a benefit association, but having rather extensive powers under its charter it proceeded to make rules, which were so stringent as greatly to interfere with the business of the port. It has in fact been very generally admitted that the falling off in shipping was due to the difficulties and delays thus caused and to the

expense of loading and unloading as compared with those elsewhere. In fact at the beginning of July there were at Montreal four large vessels, the Grassbrooke, the Oxenholm, the Assyrian and the Iron Acton, taking on board cargoes of square timber, amounting altogether to 40,000 cubic feet, which had been brought from Quebec. This was avowedly to escape from the restrictions imposed by the Ship Laborers' Society. The bill of Mr. DeGrosbois was intended to remedy this evil, and he has attained his end though without legislation. While the bill was before the special committee that had been appointed, some of the merchants of the city anxious to see its business preserved, persuaded the laborers to make concessions by changes in their rules that would obviate the necessity for the measure. Deputations from the merchants and the laborers waited upon the committee and a long discussion took place. Finally the laborers agreed to amend the rules in several important respects. It was to be the rule henceforth that steamships might use their own steam winches to hoist and lower their timber, but not to move it by steam when on board. In the case of mixed cargoes captains are not to be obliged to take more than a deal gang, but the number of men that he decides to employ are to be retained until the ship is loaded, and any vessel taking one half or less of timber may employ a deal gang if wished. The members of the Society are to be free to work on holidays at the ordinary rates, but if from religious scruples they decline to do so, they are to be allowed their places without objections on the following day. The amendments removed the most objectionable features of the regulations made by the Ship Laborers' Society and the object of the bill being thus virtually secured Mr. DeGrasbois agreed to withdraw. The removal of these restrictions will be a very welcome improvement for the lumbermen who ship timber at Quebec, and the laborers' even will soon find that they gain rather than lose by thus facilitating business.

THE Province of Quebec has taken a retrogade step in the management of its forests. The establishment of forest reserves was a regulation that was beneficial alike to the public treasury, the lumbermen and genuine settlers. Now, however, the forest reserves have been abolished in spite of the very sensible opposition of several members of the Legislature. The passing of the new Act does away with the reserves entirely, and permits settlers to locate anywhere where the land is fit for cultivation. A large number of these forest reserves are timber limits leased from the Government by lumbermen, and the passing of this Act permits settlers to locate themselves on these limits, clear land, and use and sell timber on their lots. Lumbermen have paid high prices to the Quebec Government for the privilege of cutting timber on these forest reserves, upon the distinct understanding that the reserves were to be protected from the settlers until such time as the limits should be denuded of all timber over twelve inches at the bases. It is not surprising therefor that the lumbermen are indignant at what they consider a most unjust and aggressive action on the part of the Provincial Government. The only saving clause to the lumbermen in the Act just passed was introduced in the Legislative Council by Hon. Mr. Garneau, giving the lumbermen two and a-half years, after the issuing of any location ticket, to cut off the timber on the lot located, the settler to clear only ten acres for his own use within that time. This clause is certainly an important amendment to the original Act, and the lumbermen in order to protest their interests will now be compelled to hasten the cut of this timber as rapidly as possible, in order to save as much as possible during the brief period allotted them. During the discussion of the Act at the recent session of the Quebec Legislature, it was pointed out that a door was being opened to fraudulent operations such as had formerly taken place, when pretended settlers only remained on their so-called farms till they had stript them of their valuable timber, and then moved on to some new locality to repeat this device, leaving devastation behind them. These adventurers deprived the public treasury of dues, interfered with the operations of the lumbermen, and did not become farmers. The wise plan is to divide the forest and agricultural lands, and then the greatest value is obtained from the forests, and real farmers are not induced to settle on poor agricultural land when fertile districts far better suited for their purpose are abundantly sufficient. Quebec was ahead of the other Provinces in this respect, but now it has gone back on its own record.

CORRESPONDENCE.

TORONTO, July 9th, 1888.

Editor Canada Lumberman.

DEAR SIR,—In your issue of July we read a letter signed Wholesaler, in answer to one Pinus, and we feel called upon to ask him to draw it mild. He makes assertions and classes dealers so widely that he will have to put on his check line, or he will find that there are people who claim to be retailers that have paid up their paper last winter and every other winter for the last ten or twelve, as well, if not better, than any wholesaler who does business in Toronto to-day. His assertion about fear of contradiction is very loud, and if he wishes to go further we are perfectly willing to take up the gauntlet with him.

He may be right in some cases, but evidently the class of customers he has been carrying are of the lame kind, and he should be ashamed to own up that he is and has been in such company so long. He should make a desperate effort to get into better, as there is no ability required to sell lumber to that class of men, and judging from his harsh remarks this wholesaler must be badly used. As to his remarks that the wholesale men do everything that is necessary for the retail men, all we have to say is that if the retail men were only energetic enough to place themselves in such a position that their credit was as good as the wholesale man (which to our minds is not a very hard job) they would find that the manufacturer would be as anxious to sell direct to them, if not more so, than to the wholesale men, as if the retail man cannot sell his lumber at a profit, and to men who will pay for it, he can keep it piled in his yard, and if the worst comes to the worst he can hand it back to the manufacturer. Whereas, if the wholesale man gets it and finds it slow sale, he is bound to unload, and those people he speaks of who only pay 25% gets it and the manufacturers get 30 or 40 cents on the dollar from the wholesaler, who holds as his share a lot of unpaid notes, and where do you find the retailer? He is the best off; he has the stock on hand, even if unsold, and the wholesaler stands between him and harm. This goes to show you that it lays with the retailer himself to deal with the mill man, who is only too anxious to do so if the mark is good. In conclusion, we would ask wholesalef that when he next throws any slurs on the retailers he will be kind enough to remember that there are as good as he who claim that title, and who feel thankful that they stand as high in the scale as he does. By inserting this you will much oblige.

Yours, respectfully,

DOCKIE.

TORONTO, July 9th, 1888.

Editor Canada Lumberman.

DEAR SIR,—Will you kindly allow me to correct an unintentional error which appeared in my letter in your last issue, wherein I say, "that not more than 25% of so called yardsmen's paper was met at maturity during last winter." Whereas I intended to say, "that not more than 25% of so-called yardsmen retired their paper at maturity during last winter." There are several firms doing a joint wholesale and retail business from car and dock, as doubtless some others who meet their engagements promptly, and I trust that all such will accept this prompt correction in the same spirit intended by the writer.

Truly, yours,

WHOLESALER.

LONDON, June 28th, 1888.

Editor Canada Lumberman.

Could you or any of your readers inform me of the places in Ontario or Quebec to secure the best grades of Hard Maple, the section of the country where the best quality grows, also how I can procure a copy of the Government Forestry Report?

Yours truly,

JAMES GORDON.

Answer (1)—Those of our readers who are interested in the class of wood referred to above, are in a position to give our correspondent the necessary information. (2)—Write direct to the Crown Lands Department, Toronto, for Ontario Forestry Report and to the same department at Quebec for the report of the Province of Quebec.

New Brunswick Matters.

MADAWASKA, July 4th, 1888.

Editor Canada Lumberman.

By some mishap one or two of the latest numbers of your valuable journal failed to put in an appearance, and we are now looking forward to receiving the July issue.

The winding up of our last winter's operations is being carried on successfully, and the drives, with a few exceptions, have already reached the Fredericton booms. Owing to the late breaking up of the lakes, through which the logs had to pass, operations have been delayed, but on the whole there has been no reason for serious complaint. There has, without doubt, been an unusually large quantity of logs handled since the commencement of operations last winter, and the lumbermen's prospects look bright.

No doubt inside of two years a great reaction will take place in the business of small lumber operators, those who have been engaged in picking up the culling of the larger operators. The work of thinning out our forests has been going on at such a rapid rate of late years, that before long there will be literally nothing left to cut. As a consequence the trade will rapidly diminish, and heavy losses will be the order of the day.

There is no disputing the fact that we have too many novices engaged in the lumber trade, and as a result they have to pay dearly for their experience. It requires many years of experience to become a successful lumber operator, and among the many requisites necessary is the knowledge of how to [illegible] economically saw lumber, at the same time placing the proper value on the good article, and how to avoid loss in [illegible] inferior stock. He requires to thoroughly cruise his limits and exercise enough judgment to *know* a good chance from a good one when he sees it, and not say I *think* it will hold out a [illegible] supply. The next [illegible] a good camping ground handy to water and advantageous for log hauling. Another, and the next important move, is to select first class choppers and teamsters. The choppers should be taught not to cut a faulty tree, or one too small; if they do charge them with the expense of hauling to the [illegible]. No man is capable of successfully conducting a lumber business of any importance unless he can teach his men their duty from the cook to the stream-driver. What robs our lumber operators more than anything else is the cutting of poor [illegible] and small timber. Instead of quantity the main consideration should always be quality, as one-half the quantity of good timber pays better than double the amount of poor [illegible].

It requires an age to learn the lumber trade, and [illegible] theoretical but practical training is essential to success. I had an old Yankee in my employ at one time who told me that when he had driven oxen for about twelve years he considered that but few if any could excel him, but that after 25 years experience, he had come to the conclusion that his knowledge of teaming was very limited. A good lumberman will sooner or later come to the same conclusion. The more experience he has the more he will find out that he has still more to learn.

P. O. DYSART.

TORONTO, July 25th, 1888

Editor Canada Lumberman.

It may be presumptious for a retail man to reply to the article "Wholesaler," but being constituted as we are we will [illegible] "Wholesaler," and endeavor to express our opinion, even at the risk of being cut [illegible] a few more old saws, badly set and recklessly set in motion by this wholesale man.

Retail men, one and all, will not buy at the mills—[illegible] will not [illegible] the wholesale purchasers of the stocks? As the lumber must be seen; consequently the lumber must be brought here to be inspected, examined, etc. As the mill men do not, to any alarming extent, [illegible] to this point on speculation, it must be the wholesalers who do so. In paragraph number two we are gravely informed that on condition of not going to the mills the wholesale men promise not to break bulk nor sell to consumers. Again in the same paragraph we are told that during the past winter retail men did not retire more than 25% of their paper as it matured and wholesale men had to carry them through.

Observe, firstly, one and all retail dealers decline to purchase at the mills; secondly, that without exception they all require the wholesale dealer to pay the entire freight charges, excess included, still more the wholesale men had to carry 75% of the retailers paper, from all of which we infer that all without exception buy from the wholesale dealers. Such being the admission of "Wholesaler" (*vide* communication) whence the necessity of the condition required and which the most important men in the retail branch decline. In other words, the wholesale men ask the retailers to do what they are not doing. Is Lord Dundreary redivious? This is something "no fellah can understand."

As the wholesale men sell to the best consumers we have, the retailers have the men who possess but small capital and to whom they are compelled to grant renewals, hence the necessity for the retail men in turn requesting renewals. The price to the consumer supplied by the wholesale men being the same as to the retailers we are thus precluded from selling them and are hampered by the wholesaler. We must not raise any objections or we will be treated to the wisdom of the ancients (not by Bacon) in a condensed form.

One esteemed friend in classing the sale of a car of lumber with wholesale transactions is immensly humourous.

While still of the opinion that the R.R. yards should not be kept as a preserve for wholesale men, we are glad to know that they have actually condescended to make an offer to the R. R. Co.; and that they are desirous of paying for what they receive, although, sad to relate, sometimes they pay for more than they get. Unfortunately this occurs frequently in these degenerate days. With this communication, adieu.

PINUS.

THE FIRE RECORD.

The shingle and heading factory of Mr. D. Tennant, Hepworth, Ont., was destroyed by fire July 11. Loss, $2,000.

The saw and shingle mill of Mr. J. S. Levericht, Sturgeon Lake, Ont., was destroyed by fire June 21st. Loss, about $4,000.

McLellan's saw mill, in the twp. of Burpee, was destroyed by fire, together with a valuable horse, on the night of the 2nd July. The loss is estimated at $5,000.

A large boat belonging to the Georgian Bay Lumber Co. was burned at Waubaushene July 17th. A storehouse belonging to the same company was also consumed.

A warehouse owned by J. C. Schliehauf, at West Lorne, was destroyed by fire on July 8th, together with about 4,000 feet of lumber and the M. C. R. cattle schutes.

Lafrenciere's immense sawmills at Louisville, Que., were burned July 13th. A large number of logs were lost. The damage, it is expected, will reach $100,000; partly insured.

Bush fires at Carron's siding, Midland railway, burnt the station, 6,000 telegraph poles, a large quantity of cedar posts, several thousand cords of wood and a steam saw mill. Loss $15,000.

Callaghan Bros'. shingle and saw mill at Emily creek, on the south shore of Sturgeon lake, were destroyed by fire recently. A Mr. Leveridge of Port Hope owned the buildings. Loss about $5,000, with a slight insurance.

Mr. Geo. Thompson's steam sawmill, near Wingham, Ont., was destroyed by fire July 24th, together with about eight hundred cords of hard and soft wood slabs, sawn for firewood. Insurance on mill is said to be $1,000. Loss about $3,000.

A fire broke out in the engine house of Heap's cabinet factory at Oshawa on July 6th. Considerable damage was done as a good deal of lumber was being dried in the kiln attached to the engine house, but the loss is covered by insurance.

On June 27th the saw mill belonging to Kramer Bros. a few miles from Teeswater, Ont., was completely destroyed by fire. Loss on mill, logs, lumber, lath and shingles, about $5,000; no insurance. An effort is being made to enable the late owners to rebuild.

A most disastrous fire occurred at Southampton, Ont., the first week of July, through which about four thousand ties, two cars belonging to the Grand Trunk railway, and about one hundred and fifty feet of the south landing piers, the property of the government, were burned.

The town of Gravenhurst had another very narrow escape from being destroyed by fire on July 10th. Sparks from extensive bush fires on the south-west side of the lumber yards of Messrs. Mickle, Dyment & Son, Isaac Cockburn and Thomson & Baker nearly proved disasterous not only to the extensive piles of lumber just mentioned but also to the town. By the prompt response, however, of the firemen no serious damage was done.

A most disastrous fire occurred at Milmay, Ont., July 26th, by which the large roller mill, saw mill and private residence of Messrs. Eidt & Schmidt were totally destroyed. In the roller mill were about two thousand bushels of wheat and a large quantity of lumber was also destroyed. Burning shingles were carried a great distance and were the cause of two or three small fires in the village, which were luckily extinguished before gaining any headway. The loss is estimated at $20,000; insurance, $5,000.

A dispatch from Montreal under date of July 6th, says: Terrible forest fires are raging on the line of the Canada & Atlantic Railway, between here and Ottawa. Eighteen miles of track have been destroyed and cars were burned at McCaullay's Landing; also three mills and many houses were destroyed, and many thousand feet of lumber were swept away. The settlers are clearing out. Wade's saw mill, 5,000 cords of wood, five freight cars, five houses, and thousands of cords of tan bark have been destroyed. The country on each side for some days has been utterly impassable.

On July 7th a very disasterous fire raged at Corson's siding on the Midland railway, destroying the station and everything in the vicinity of it. The property destroyed consisted of 4,000 telegraph poles, an immense quantity of cedar posts and ties, several thousand cords of wood, a large quantity of lumber, together with Decatur's steam sawmill and outbuildings; also Capt. Corson's coal house with a considerable quantity of coal. The loss is roughly estimated at $10,000, and so far as can be learned the property was not insured. The fire was caused by a spark being carried by the wind from bush fires two miles distant.

During the early part of July, Mr. T.B. Tait's saw and shingle mill at Germania, together with the season's cut of lumber—about 500,000 feet, was totally destroyed by fire. It is supposed to have been caused by sparks from the refuse burner which caught in the mill and spread from it to the lumber yard. The high wind which prevailed at the time rendered it impossible to do anything to check the fire. Very general sympathy is felt for Mr. Tait in his serious loss which will amount to about $10,000, insurance only $2,000. This is the second mill on this site that Mr. Tate has lost by fire, besides the boarding house at Germania two years ago, and his residence at Gravenhurst. It is understood that he will not re-build at Germania.

CASUALTIES.

Eli Michaud was drowned a few days ago at Eddy's boom in Hull.

A man named Joseph Morceau had his leg badly jambed by one of the log carriers in Booth's mill at Ottawa recently.

A man, whose name we have not learned, had his hand cut off in Day's shingle mill, Manitowaning, a few days ago, and died the following day.

A colored man named Chas. Johnston, engineer at A. Dallas' stave mill, Chatham, Ont., was instantly killed July 19th by being caught in the belting.

While hewing a stick of timber at Rodd's new saw and shingle mill, near Lindsay, Ont., J. P. Miller allowed the axe he was using to slip which cut in the instep severing an artery. He had a narrow call, but is now doing well.

A despatch from Minden, Ont., says that John Massales, a young man working on one of J. M. Irwin's drives, was drowned while breaking a jam in the rapids on Gull River, about four miles from Minden. His body was found about a quarter of a mile from where he fell in. His parents live near Haliburton.

Mr. Darwin Stevens, chief millwright at Hamilton Bro.'s mill, and one of the most respected citizens of Hawkesbury, Ont., was accidentally drowned there on July 23rd. He was walking on a boom at the edge of the Yuile and slipped off into the rapids, the strong current sweeping him down quickly beyond help.

On July 20th Master Charles Kerr while attempting to put on a belt on a pulley in Messrs. Bick & Sons planing mill at Cannington, Ont., his right hand caught in the belt and was wound around the shaft till his arm was pulled clear from the body at the shoulder. The unfortunate lad is reported as doing well under his trying ordeal.

On Friday, July 13th, six men employed by the Eau Claire Lumber Co., Calgary, lost their lives in Kamanskis rapids on the Bow river, 45 miles west of Calgary, while driving logs. At that hour nine left the camp in a boat for the opposite shore to commence the day's work. The point at which they attempted to cross, though not considered dangerous, is only a short distance above a chute of some five or six feet. When the boat got within a few feet of the shore the hands attempted to snub her to a stump on land by throwing a line. In this they failed, the boat became unmanagable and swung around in the current, instantly acquiring such a momentum of speed that before anything could be done to stop her she shot over the fall like an arrow. In the leap over the first falls she only shipped a little water and she passed the second fall without shipping any more. Just after passing the third fall, however, she struck a rock and capsized. Three men managed to catch the upturned boat, but the other six were carried down stream and drowned. The three shortly afterwards were rescued.

ITEMS OF INTEREST.

A dozen trees planted each year may change the appearance of a farm greatly in a generation, and lead along to income, very satisfactory as well.

An exchange says it takes $60 each year to provide a farmer with fuel in Dakota. The stumpage question does not bother the authorities out there.

The Dodge Wood Split Pulley Company, of Toronto, of which Mr. Samuel May is president, have purchased a site for their new works at West Toronto Junction, near that city, and will, during the present season, erect extensive buildings thereon.

A Pittsburg mechanical engineer, 82 years old, is said to have invented a novel movable dam, by which he claims a boating stage of water may be obtained in shallow rivers at all seasons of the year, and old river men have pronounced the invention practical.

It is most desirable that encouragement be given to the cultivation of trees, and in order to prove more effective, some other system than that of appointing an arbor day will doubless have to be resorted to. The granting of prizes in each municipality, for the best ten acres or more of trees, might have a good effect.

Ebony can be imitated on wood by first painting with one per cent. solution of sulphate of copper. When perfectly dry, the wood is painted over with a liquid consisting of equal weights of aniline hydrochloride and spirits of wine. The blue vitrol acts on the aniline, and forms nigrosin, a black which cannot be affected by acids or alkalies. A luster can be added by coating with simple copal varnish.

Log drivers are important personages at this time of year, and are being talked about by everyone. The Menominee (Mich.) *Herald* says they have a nomenclature of their own, containing words unintelligible to the uninitiated. We have heard a few, but cannot perhaps give the correct idea of their meaning. "Wing-jam" is said to be a collection of logs on the shore of a stream, while a "center" is a jam of logs on an island. "Breaking a center" is, of course, dislodging logs "hung up" on an island. "Tow head" is reported to be a small island, invisible at high water, but sticking up as the water recedes, just enough to catch logs floating down stream and stop them. A "sweeper" is an uprooted tree which has fallen into the stream, and oftentimes as a log or boat containing the men comes upon such an object unexpectedly the poor fellows are swept off into the flood.

THE LATE STRIKES.

Since the part of THE LUMBERMAN containing a report of the strike among lumbermen in the Georgian Bay and Ottawa districts went to press we learn that the strikes in both places have been amicably settled. The men in the Georgian Bay district, it is stated, have succeeded in making a compromise with their employees which enables them to draw their wages fortnightly instead of monthly as heretofore. They will, however, work eleven hours per day as in the past, not having succeeded in getting the reduction asked for.

The men in the employ of J. R. Booth, of Ottawa who went out on strike for an increase of wages, have returned to work on the old terms on the understanding that if upon examination of the pay sheets of the business it is discovered that the employees of Mr. Booth are receiving less pay for the same work as is paid eleswhere that the deficiency, whatever it may happen to be, will be made up.

GENERAL NEWS NOTES.

—The British steamer [illegible] Mass., from Chaleur Bay, N. B., [illegible] way ties, which is said to be the [illegible] taken to Boston and the *Alaska* is [illegible] the business.

—A feature of the London (Eng.) Board of Trade timber returns is that affording us an insight into the enhanced value which importers have given for this year's purchases. The chief increase seems to have been on hewn descriptions, which represent intrinsically over £120,000 more value than *pro rata* they did June twelvemonth. The sawn wood exhibits an increase in cost of over £60,000. These values are estimated from the shipping documents, and therefore are fairly accurate.

The following is a comparative statement of Timber, Masts, Bowsprits, Spars, Staves, etc., measured and culled to July 18th at the Port of Quebec:

	1886.	1887.	1888.
Waney White Pine	1,007,646	604,648	586.948
White Pine	744.676	456.588	162.902
Red Pine	157,364	355,877	170.689
Oak	450,015	335.557	557.270
Elm	384,175	160,012	109,695
Ash	92,159	30,136	68.212
Basswood	218	64	.....
Butternut	192	55	419

Birch and Maple	153,742	114,228	124,995
Masts and Bowsprits	—pcs.	—pcs.	—pcs.
Spars	—pcs.	—pcs.	—pcs.
Std. Staves	36.1.3. 1	38.3.2.22	18.9.2.27
W. I. Staves	8.1.2.17	65.9.1.26	168.8.2. 5
Brl. Staves	.....	13.5.3. 3	11.4.3. 5

Hardening Wood.

"The recently invented process," says *Iron*, "by which wood is made to take on some of the special characteristics of metal, has been turned to practical account in Germany. By this process the surface becomes so hard and smooth as to be susceptible of the high polish, and may be treated with a burnisher of either glass or porcelain; the appearance of the wood being then in every respect that of polished metal, having, in fact, the semblance of a polished mirror, but with this peculiar and advantageous difference namely, that, unlike metal, it is unaffected by moisture. To reach this result the wood is steeped in a bath of caustic alkali for two or three days together, according to its degree of permeability, at a temperature of between 165 and 197 degrees Fahrenheit. It is then placed in a second bath of hydrosulphate of calcium, to which a concentrated solution of sulphur is added after some twenty-four or thirty-six hours. The third bath is one of acetate of lead, at a temperature of from 95 to 120 degrees Fahrenheit, and in this latter the wood is allowed to remain from thirty to fifty hours. After being subjected to a thorough drying, it is in a condition for being polished with lead, tin or zinc, as may be desired, finishing the process with a burnisher, when the wood apparently becomes a piece of shining polished metal.

THE NEWS.

ONTARIO.

—The Collingwood Dry Dock has been disposed of at Bailiff's sale.

—Bush fires have been very bad in the country surrounding Byng Inlet.

—River driving on the northern waters is said to be three months ahead of 1887.

—Pierce & Co's mills, at the Chaudiere, are now running at night by electric light.

—The machinery for the Neebing Lumber Company's saw mill at Port Arthur has been shipped.

—Burton Bros., of Byng Inlet report that their cut up to July 21st amounted to over 5,500,000 feet.

—The Spanish River Lumber Company lost $12,000 by the extensive fires which totally destroyed their two camps.

—David H. Cameron, lumberman, Boundary Line, has assigned. His liabilities have not yet been ascertained.

—McLachlin Bros., the well known lumbermen, have generously granted to Arnprior a site for the new town hall.

—A Detroit firm is now shipping several thousand cords of spruce and other soft wood, for paper making, from Port Findlay.

—The McBurney & Laycock Lumber Co.'s mlil at West Gravenhurst recently cut 250,000 feet of lumber with one circular in a week.

—About 22,000,000 feet of logs are adrift in Lake of the Woods. The break was caused by a raise in the water letting the logs out of the booms.

—From almost every section we learn that the drives are progressing very favorably, and in some localities are months ahead of previous years.

—Messrs. Burton Bros. steam tug "Metamora" has brought to Byng Inlet three tows of logs this summer, each tow exceeding 16,000 pieces.

—Messrs. Cummer and R. Young, sawmillers, of Arran, were each severely fined recently for allowing sawdust from their mill to fall into the river.

—The Algoma Mining and Lumber Syndicate will shortly commence work on some of their valuable properties at Goulias Bay and Garden River.

—Graham, Horne & Co., of Port Arthur, have secured the contract for supplying all the lumber necessary to complete the new elevator at Fort William.

—A fine drive belonging to the Rathbun Co., of Deseronto, consisting of about 160,000 logs, passed down the Otonabee river during the early part of July.

—During the recent storm the tug Superior had 12,000 logs in tow for the Victoria Harbor Lumber Co. The logs broke loose and were lost near Giant's Tomb.

—The smoke stocks of the Midland & North Shore Lumber Co's timber and shingle mill has been raised and the new mill will be ready to commence cutting in a short time.

—Thirty feet addition is being built to the saw mill at Young's Point by Mr. C. Young. He has a big order for shingles which will tax the capacity of the mill to supply.

—The steam barge *W. B. Hall*, owned by the Midland & N. S. Lumber Co., was recently loaded with 500,400 feet of lumber in a little less than seventeen hours. This is a good record.

—At a recent meeting of the directors of the Lakefield Lumber & Manufacturing Co., Mr. A. V. R. Young, chartered accountant, of Peterborough, was appointed auditor for the Company.

—Messrs. Hurdman & Co's new mill at the Chaudiere is now running, and will increase this season's cut by about 30,000,000 feet. The mill is lit by electricity and will run day and night.

—Bush fires have been doing an incalculable amount of damage throughout the country during the past month. The recent rains have done much, however, towards putting a quietus to the flames.

—Mr. Archie Brook's raft of 25,000 feet of square timber rafted at Belleville, has recently reached Quebec. It was a fine lot of timber and the Quebec papers note its quality in announcing its arrival.

—John Hoffs, night fireman in the Cedar mill, at Deseronto, has received notice from Washington, D.C., that he is entitled to a pension and will hereafter receive $20 per month; besides he will get $3,000 back pension.

—The Madawaska Improvement Co. is about to purchase a steam boat for use on the improvements on the Madawaska river. The company begin its operations next spring when it will bring the Madawaska drive into the Ottawa river.

—Sawdust explosions are becoming a very common occurrence in the Ottawa river. A few days ago the sawdust seemed to concentrate in one place and suddenly rose ten feet out of the water in a large column accompanied by a loud report.

—Some of the mills at the Chaudiere are being supplied with a new patent fire alarm apparatus, which will locate the exact vicinity of a fire a few seconds after it starts. In various parts of the buildings, thermometors are attached to an electric wire.

—The Upper Ottawa Improvement Company and Capt. Goulet have gathered together nearly 44,000 logs which broke loose from the tows on Deschenes Lake during the recent storm. They have been pocketed along the shores and towed into the booms.

—N. Dyment has already put in his Goderich yards 1,150,000 feet of lumber this season, and expects to handle five and six million more feet before the season is over. Besides the schooner J. N. Carter, it is expected that he will have two more boats put into the harbor carrying trade shortly.

—The drive consisting of 100,000 logs, belonging to the Messrs. Gilmour, of Trenton, now on its way down the Otonabee river, is made up of some of the best logs which have passed through these waters for a considerable time. All the drives in this direction, so far, have made good headway.

—Lumber operations in Toronto are reported quiet and likely to continue so for some time. It is said that sooner or later the manufacturers will be compelled to reduce prices as the margin for middlemen is considered very meagre. Out of town shipments are slow, freight rates being nominally the same.

—The canal statistics for 1887 shows that the Canadian Pacific and Canada Atlantic railway have become formidable competitors to the canals in the Ottawa district. The quantity carried from Ottawa by these two railways in 1886 was 89,000,000 feet, which increased last year to 100,000,000 feet, while the canal traffic decreased 22,000,000 feet in the same period.

—Mr. D. A. Martin, Messrs. Bronson & Weston's upper Ottawa agent, who returned from a four weeks' canoe voyage on the upper reaches of the Ottawa reports extensive fires on Wm. Mackay's limit near Mattawa, and also on the limit of the Messrs. Klock Bros,, near Klock's mills. There are other extensive fires, he says, on the south side of the Ottawa, but none on the north side.

—The Commission appointed by the Dominion Government to investigate the proposed course of the Trent Valley Canal have been over the ground thoroughly and will doubtless soon present their report to Parliament. The T. V. canal would if constructed prove a great boon to the section of country through which it passes, and would be of particular benefit to the lumber trade.

—The dam built by the Dominion government at the Lake of the Woods, near Rat Portage, last spring, gave way recently carrying with it the colonization bridge, built by the Ontario government. The loss will be over $10,000. The lake is very high. There is plenty of water power without the dam, to run the mills, the dam only being of use when the water is very low, in occasional seasons.

—The losses from rafting on the lakes are very great. Recently on Lake Huron a large raft belonging to Dellar, of Marquette, en route to Bay City, was run into just above Lake George in the St. Mary's river by the C. P. R. boat Athabasca, and the logs were scattered all over Lake George. The raft contained between 2,000,000 and 3,000,000 feet. It is said that a legal contest will probably determine just what rights a raft has.

—Messrs. Vansickle & Bro., of Barrie, write the LUMBERMAN that their cut of lumber this year will be about 2,000,000 feet, made up as follows: 700,000 feet of Black Ash, 200,000 feet of Basswood, 100,000 feet of Elm, and the balance of stock pine and hemlock. They expect to get through cutting about the first of October, and will then send their men to the bush, to get out another stock about the same as the present one. They report trade good so far this season.

—Some of the mills at the Chaudiere are being supplied with a new patent fire alarm apparatus, which is said will locate the exact vicinity of a fire a few seconds after it starts. In various parts of the buiding theremometers are attached to an electric wire. When the heat in the vicinity of a thermometer rises above 110 degress the glass breaks. This starts a bell in the watchman's room ringing. Each of these alarm bells has a number by which the watchman can tell exactly the location of the fire.

—West Toronto Junction is becoming quite an important lumber point, several yards being already in full swing. From what THE LUMBERMAN can learn, however, it takes about as long to transmit a car of lumber from Toronto to that point as it would if it came from across the sea. Purchasers at that junction have evidently made up their minds that in order to secure a stock of lumber by a certain date they have to give the order a month ahead. The railway company is of course to blame, and it is high time that some better service should be inaugurated.

—Messrs Barnes & Co., proprietors of the large box shook factory at the Chaudiere have received an offer from the City Council of St. Albans, Vt., of a complete new factory, fully supplied with power, exemption from taxation and in addition a bonus of $10,000 if they would consent to remove their business to that point. The offer has been refused. The firm employ about 300 hands, all of whom reside in the city of Hull and at the rate they are now manufacturing they will purchase about 18,000,000 feet of lumber a year from the Chaudiere lumbermen.

—The latest estimates of this season's cut by the Ottawa mills makes a total of 405,000,000 feet, the largest, it is said, for ten years. The estimates of the different firms are as follows: E. B. Eddy Manufacturing Co., 90,000,000 feet; J. B. Booth & Co., 75,000,000; Hurdman Bros., 70,000,000; Perley & Pattee, 60,000,000; Bronson, Weston & Co., 55,000,000; Pierce & Co., (formerly G. B. Grier & Co.) 35,000,000; Conroy & Co., 30,000,000. Down the river the Gilmours will saw about 50,000,000 feet, and Edwards & Co., of Rockland, 40,000,000. All the mills are running day and night.

—Mr. J. M. Irwin, of Peterborough, has three magnificent drives on the way to his mills at Nassau. We understand there is a total of eight million feet in all, principally made up of dimension timber. The superintendent, Mr. G. S. Thompson, informs us that they have had exceptionally good success in their stream driving this year, there being abundance of water to float all the logs without trouble. The foremen of the three drives referred to are C. Austin, G. Johnston and T. Preston. This timber comes from the Canadian Land & Emigration Company's lands in the township of Harburn, Guilford. The total cut at the Nassau mills this season will be about 14,000,000 feet.

—A raft of white pine; says the Ottawa *Journal*, belonging to Hale & Booth spoken of in those columns as passing over the Deschenes rapids on Monday last, and which was said to be of unexceptional quality and size, was yesterday sold to arrive at 38 cents per foot. This is said to be probably as big a price as ever paid for white pine on the Ottawa, and shows what quality and a clearing Quebec market will do for the enterprising lumbermen. The total amount paid for the pine was $53,000. The excellent quality is accounted for by the fact that the timber is the first cut on the new limits on the Amable du Ford, sold by the Ontario Government last season. Another raft from the same section the property of Mr. Mackay, of equal if not so large quality, is coming down in good shape. The raft was sold to Dobell & Co., of Quebec.

—Advices have been received by Messrs. Perley & Pattee from Little Basin depot, on the Bonchere river, that on Tuesday, July 17th, the bush fires which were burning there destroyed the Little Madawaska depot on the Petewawa and about $10,000 worth of provisions, stock, shanty implements, etc. The communication received by the firm here says that the fire began on the back of the limit, near Cedar Lake, and swept right across the country past Little Madawaska depot and was within a mile of Little Basin depot when Wednesday's rain damped but did not extinguish it. Had it not been for the rain on Wednesday a gang of one hundred men from the timber drives, who were engaged trying to stay the fire, might have perished about a mile from the depot. They were completely surrounded by masses of burning timber. The rain dampened the fires sufficiently to allow the men to escape from their dangerous situation.

—The Longford Lumber Co. write as follows to the *Northwestern Lumberman*:—"Our Company this season has taken out its usual stock of logs, about seventeen million feet. We found last winter to be one of the best for taking out stock, their being continual steady cold weather. Fears were entertained early that the supply of water for driving would be short, but on account of the dull backward spring the water in our streams has held up well, and our drives are fully one month ahead of other seasons. Our three mills started running about May 1st, and so far our stock is coming out fully up to the average, both in quality and manufacture. The demand for dry lumber is good, many lines being already cleared out of our yards, a large portion going to Boston by all rail route. We are anxiously waiting the action of Congress on the tariff question, and we presume our neighbors must be in the same mood, as we have not seen reports of many sales of the new cuts."

QUEBEC.

—The first cargo of white pine shipped for the season from Montreal to the River Plata, South America, cleared June 19, and amounted to about 450,000 feet.

—The E. B. Eddy Manufacturing Co. have taken a new departure in manufacuring from sawdust vessels in the shape of a pot capable of resisting heat and fire.

—Reports from Montreal go to show that there has been more activity in lumber and sales have been more frequent of late. The sales so far have been in excess of the same period last year, and prices continue satisfactory.

—The prohibition of the passage of cribs through the Grenville canal was owing to the rafts impeding boat traffic and causing injury to the canal works. In view, however, of the construction of the dam across the Ottawa river at Carillon, free passage will be given to rafts through the Carillon canal. At low water it has been decided to allow rafts to use the old Ste. Anne's canal.

—At the annual meeting of the shareholders of the Quebec and Lake St. John Railway Lumber and Trading Company, the following were elected directors: Hon. J. G. Ross, Hon. I. Thibaudeau, E. Beaudet, Sir A. P Caron, Hon. P. Garneau, Thos. A. Paddington and Gaspard Lemoine. At a subsequent meeting of the directors Hon. J. G. Ross was elected president, and E. Beaudet vice-president.

—Application has been made by Mr. J. T Lewis to admit to probate in Ontario the will of the late Hon. John Hamilton, of Montreal, lumber merchant. The personal property of the deceased gentleman in Ontario, exclusive of real estate, was sworn to at $600,000. This amount does not include the $600,000 worth of limits sold a few days ago, which are in the Province of Quebec, nor any of the other Hamilton property in Quebec.

—Mr. J. B. Charleson, inspector of forests for the Province of Quebec has returned from a lengthy examination of timber lands around the head waters of the Ottawa river. He found that a firm of square timber makers, having headquarters at Mattawa, and with whom a prominent M.P.P. is said to be closely allied, trespassed upon government limits around Lake Expanse stumpage and took therefrom 3000 valuable trees, for which no stumpage dues were paid. It is also hinted that the trespass was committed with knowledge and connivance of officials of the Crown timber office there; that the parties trespassing are not regular lumbermen, but speculators.

—R. H. Klock & Co's raft of square timber is now a considerable way below the Mountain Rapids on its way to Quebec. This timber was taken out on the shores of Lake Quinze during last winter. It is a fine lot of timber, being sound and well made. The raft consists of 135 or 140 cribs and although it was driven through the Quinze rapids, (the roughest rapids on the Ottawa river) it sustained little or no damage therein. The drive was under the management of Mr. Wm. Wade, the well known pilot of Grenville. It is credibly stated that this was the fastest drive that has ever been made without leaving a single stick behind, and it is alleged the sweep would have been less arduous had not Messrs. Gillies Bros. let down their logs on the top of the timber. Mr. Wade expects to reach Quebec before the last of July.

NOVA SCOTIA.

—It would take fifty trains of fifty cars each to transport the lumber contained in Leary's log ship. The ship will in all probability be launched before this paper goes to press. The cost of this log ship if landed successfully in New York is as follows: Timber's cost in Nova Scotia, $13,000. The towage will cost $100 per day, and the logs will be sold in New York for $50,000.

MANITOBA AND THE NORTHWEST.

—The planing mill at Selkirk, Man., is now completed, making another addition to the industries of that town.

—Owing to the dry weather, bush fires have been doing a great deal of damage lately in the timber country east of Winnipeg, in the vicinity of Whitemouth, where there are lumber mills.

—Tree-planting is being carried on to a considerable extent throughout the Northwest. The present has been a very favorable one for this kind of work. Steady cultivation when this is practicable, or a heavy mulching where the grass needs to be kept down, are necessary to complete the work well begun.

Following are the list prices, f. o. b. at Rat Portage, Keewatin and Norman:—Dimensions—2x4 to 8x8, 12 to 16 ft. long, $14; do. 10, 18 and 20 ft. long, $15; 2x10 to 12x12, 12 to 16 ft. long, $15; do. 10 and 20 ft. long, $16. Fifty cents per M advanced on each foot over the above length up to 24 feet long. One dollar per M advanced on each foot over 24 feet long. $1 per M advanced on each inch over 12 inche surface. Surfacing, 50c. per M; Surfacing and siding, $1 per M. Boards—1st, common, rough, $15.50, dressed $16.50; 2nd common rough $14, dressed, $15; Culls, rough, $10; dressed, $11; 1st common stock, 12 in. rough, $18, dressed. $19; do. 8x10 in. rough, $17, dressed, $18; 2nd common, 12 in. rough, $16, dressed, $17; do. 8x10 in. rough, $15, dressed, $16. Ten feet long and under, $1 less per M. Shiplap—10 in. $17; 8 in. $16.50. Siding, ceiling and flooring—1st, 6 in., $31; 2nd, do., $26; 3rd, do., $20; 4th, do., $17; 1st, 5 in., $31; 2nd, do., $26; 3rd, do., $19; 4th, do., $16; 1st, 4 in., $31; 2nd, do., $26; 3rd, do., $18; 4th, do., $15; 8 and 10 in. flooring, at $1 per M advance. $1 per M advance for dressing on both sides. $1 per M less for lengths 10 feet and under. Bevel siding—No. 1, 1st siding ½ in. x 6 in. $20; No. 2, do., $17. Stock—B, $35; C, $30; D, $25. Clear, 1 inch—1st and 2nd, $32; 3rd, $28. 1¼, 1½ and 2 inch—1st and 2nd, $40; 3rd, $35; selects, $30; shop, $25. Mouldings—Window Stops, per 100 feet lineal, 75c.; Parting Strips, do., 50c.; ¼ round and cove, per 100 feet lineal, 60c. Casing—4 in. O. G., per 100 feet lineal, $1.50; 5 in. do., $1.75; 6 in. do., $2; 8 in. O. G., base, $3; 10 in. do., $3.75. Lath, $1.75. Shingles—1st quality, $3; 2nd do., $2.50; 3rd do., $1.50; 4th do. $1. Dealers are requested to order by number.

BRITISH COLUMBIA.

—The Royal City Mills, New Westminster, B. C., has been shipping fir sill timber to some of the larger car works in the United States, and lately shipped a lot 65 feet long, and without knot or flaw, to the Crossen Car Works, Cobourg, Ont.

—About a month ago the collector of customs at Vancouver, in interpreting the customs law imposing an export duty on logs, included piles. In one instance the duty was exacted and paid under protest by the shippers, who held that piles were manufactured timber and as such not subject to duty. The matter has since been referred to the department at Ottawa, and information has been received that the decision of the local collector has been over-ruled and the money refunded.

—The industries and resources of Vancouver are many in number and diverse in their character. The production of lumber on Burrard Inlet is the largest on the British Pacific coast. Great as it is a considerable addition is expected to be made to its amount in a short time by the erection of one or more large mills. Within the last year sash and door and furniture factories have been started and already their productions are being shipped to the far east both to the Dominion and to the United States. Several other wood-working industries are expected to be commenced shortly.

AMERICAN NOTES.

—A syndicate of Michigan lumbermen have bought up 50,000 poplar trees in North Carolina and Tennesse quite recently.

—The present season in Cheboygan is one of the best in the way of manufacturing and shipping lumber, experienced for years past.

—The J. E. Potts Salt & Lumber Company, Au Sable, Mich., will likely extend its logging road from its pine timber in Oscoda county, to Au Sable, 50 miles below.

—In Kansas City cypress is being used for stringers for sidewalks and yellow pine for planking, and cypress is also used for the bed planking under the cedar block paving.

—Each year it takes 500,000 acres of timber land to supply cross ties for United States railroads. For all purposes the decrease of their timber area is over 50,750,000 acres per year.

—The publication of a paper has just been commenced at St. Paul, Minnesota, called the *Western Tree Planter*. The paper will advocate the planting of trees on the western prairies, and will give special directions as to tree planting.

—Mr. A. Latch, at one time engaged in the wholesale lumber trade at Toronto, Ont., but now in Mexico, has been in New York buying a complete saw mill equipment, and intends going somewhat extensively into the manufacture of mahogany.

—Fire originating in a sawdust pile at H. R. Morse's mill, Alpena, Mich., July 11th, rendered 1,500 people homeless and in a few hours had destroyed 200 houses. The loss exceeds $300,000, with but slight insurance. At least 3,000,000 feet of lumber were burned.

—A cargo of timber and deals loaded at Mobile, Ala., by Donald Bros. & Co., for Queensboro, Eng., valued at $8,000, was lost by the abandonment of the American ship Zouave, at sea. Two of those on board were drowned, and the others were rescued in a half starved condition.

—The immense raft owned by Mosher & Fisher, lost on [illegible] it is said that men are now engaged in that work. The logs are scattered for a distance of 30 miles on the north shore of Lake Superior, and also for some distance on the south shore.

There is a struggle between the buyers and manufacturers of poplar in the United States. It has been generally acknowledged that a lumber which can so successfully replace pine as poplar should sell at prices more nearly corresponding to those of pine.

American lumbermen are preparing to develop the Cuban forests. One man who several years ago bought 30,000 acres there for $50,000, is now worth $5,000,000. One half of Cuba is covered with virgin forests. Its stumpage is thought to be worth fully $15,000,000.

--One of the most extensive schemes for rafting logs on the great lakes is that proposed by a Saginaw firm. It involves floating 10,000,000 to 15,000,000 feet of logs the entire length of Lake Superior, running them down to the Sault Rapids and through the river into Lake Michigan, and thence to and up Saginaw Bay. The logs were cut by the C. N. Nelson company of Cloquet.

—White pine is arriving in New York and the West, and so far as heard prices remain unchanged. The buyers proceed carefully but do not show by their actions that they expect lower prices. They will be conservative buyers this season. Export is just middling. It cannot be called dull as there is an average amount being loaded for foreign parts, the most of it destined for the West Indies and South America.

—The lumber and shingle receipts and shipments at Buffalo, N. Y., from the opening of navigation to July 1, were as follows:

RECEIPTS BY LAKE

	1888	1887	1886
Lumber, ft	68,181,000	72,165,000	75,[illegible]
Shingles, no	4,067,000	8,385,000	14,420,000

SHIPMENTS [illegible]

Lumber, ft	12,446,700	15,435,200	13,925,113
Shingles, no	1,434,750	2,183,000	1,100,000

The exports of lumber, exclusive of hardwoods, from the port of New York, during the month of June last and since January 1, were as follows:

To West Indies	[illegible]
To South America	[illegible]
To East Indies	[illegible]
To Europe	[illegible]
Total feet	[illegible]
Previously reported this year	[illegible]
Total since Jan. 1, 1888	[illegible]
Total same time, 1887	[illegible]

EUROPEAN NOTES.

—Chartering has been active during July and most of the coast and London importers have now made fair progress towards the completion of their tonnage requirements.

—We learn from Farnworth & Jardine, of London, that the demand for both waney and square has been on a moderate scale, and quite of a retail character; prices have been steady, and the stock is now reduced within a very small compass. In red pine nothing has been done, and the stock is almost exhausted. Oak: The consumption of logs has been fair, and has consisted chiefly of prime wood, recently imported from New Orleans, for which good prices have been obtained, but in Quebec wood little has been doing and the stock is moderate. Oak planks from the States have been imported very largely, much in excess of the demand, consequently prices have declined; sales are difficult to effect, and the stock has accumulated, and is now very heavy. Elm has been rather more enquired for, and the stock is moderate. Ash is in moderate request, and the stock is light. Pine Deals: The new import has begun to arrive this month by the steamers, and so far have all been under contract, so that no wholesale transactions have been recorded; the consumption has been fairly satisfactory, and has slightly exceeded the import, and the stock is about the same as last year. In staves nothing has been doing; the stock of pipe is heavy, but of puncheon the market is bare. Speaking of New Brunswick and Nova Scotia spruce deals they say that the import has been on a moderate scale, and the deliveries from the quays have been large, having been more than double the import, leaving the market with a remarkable light stock, only half that of last year and a quarter of the previous year; in spite of this it has been impossible to establish an advance in value, although prices have been steady, and the sales during the month have consisted chiefly of cargoes to arrive; shippers should act with caution and confine their operations to a moderate compass, otherwise present values will be with difficulty maintained. Pine Deals: Nothing has been doing, and the market is somewhat bare of stock. Birch, both in the log and in planks, is in active demand, the import has been considerable, and has all gone into consumption at better prices; the market is almost bare, and moderate shipments should sell well.

Millions of Logs Lost.

Recent rains have caused the greatest flood ever known in Northern Minnesota. Along the banks of logging streams tributary to the St. Louis river millions of acres of land have been overflowed. The immense saw mills in and around Cloquet were completely flooded, with 200,000,000 feet of logs jammed together. The latest reports state that the great booms at Knife falls gave way, letting loose about 80,000,000 feet of logs, which were swept down the river to Duluth. Some of them were caught in St. Louis Bay. The whole 80,000,000 feet were carried out in less than two hours. The damage is enormous, and can only be estimated in a general way.

The loss in the sweeping away of the booms, piers, etc., to the Knife Falls Boom Company and the lumber companies of Cloquet is put at about $150,000, while the loss on lost logs, the extra expense of handling them, and to business will be $300,000, and the damage in other ways will be enough to raise the total to $500,000 at least. The C. N. Nelson Lumber Company lost about 30,000,000 feet, saving about 6,000,000 feet. The Cloquet Lumber Company lost 35,000,000 feet, saving 6,000,000 or 7,000,000 feet, and the Water Power Company 6,000,000 feet, saving 600,000 or 800,000 feet. It is hardly possible that anything like a great proportion of the logs will be saved at all.

The Fall of the "Forest King."

A woodman wended his way thro' the wood,
Till he came to a spot where a great tree stood;
The bright sun flashed on the autumn trees,
Whose gay leaves fluttered away on the breeze.
And soon o'er the hills thro' the silence awoke,
The far-reaching echo of each mighty stroke.

The timid squirrels all scampered away,
And with a shrill scream off flew a blue-jay;
But the woodman steadily wields his axe,
And the great tree groans and creaks and cracks.
There it has stood for years three score,
But the place thereof shall know it no more.

As "King of the Forest" it held its sway
O'er valley and hill for many a day—
But now it groans in anguish of soul,
As each stroke grows nearer the heart of its bole.
The breeze that so oft has passed o'er it before,
Now sadly sighs thro' its branches once more.

Its last "farewell" is a mimic gale,
That slowly dies in mournful wail;
The noble tree sways and rocks with the breeze.
And it bids "farewell" to its kindred trees.
Then straining, rending, groaning it fell
With a thundering, echoing, crashing knell.
All its stately length stretched far o'er the ground,
And the hills repeated the echoing sound.

COLLEEN BAWN.

Railway Matters.

Negotiations are said to be on the *tapis* for the purchase, by a syndicate, of that part of the C. P. R. line extending from Ottawa to Montreal and Quebec. Mr. Beemer, Hon. Mr. Church and, it is reported, Mr. Chapleau, are interested in the scheme, which is to utilize the line between Ottawa and Quebec as the basis of a huge railway system to include the various colonization railways running north. A part of the scheme is to colonize the districts the railway will traverse. The Canadian Pacific company are said to find the working of the north shores line too expensive for the receipts it gives them owing to the lively competition of the Canada Atlantic. It is said that the C. P. R. will attempt to acquire the control of the Canada Atlantic in order to thwart the plans of the G. T. R.

The fact that Sir George Stephen, president, Sir Donald Smith, director, and Mr. Van Horne, general manager of the Canadian Pacific road, together with the officials of the Duluth, South Shore and Atlantic road, accompanied by Mr. Farrar, a prominent banker of London, England, and Col. West and Capt. Rich, of Minneapolis, are making an extended and critical examination of all parts of the Duluth, South Shore and Atlantic road, gives good reason for the belief that a stupendous magnitude between the two roads is now pending. Nothing can be learned from the gentlemen as they refuse to talk. They are travelling by special car, and are extending their investigations thoroughly from the Soo to the great mines on the Mineral range line. The presence of Mr. Farrar is taken to indicate that foreign capital is interested in the deal.

Simson & Mason *vs.* the New Brunswick Trading Company.

In the Queen's Bench Division of the High Court of Justice on Tuesday, before Mr. Baron Huddleston and Mr. Justice Charles, the case of Simson & Mason *vs.* the New Brunswick Trading Company came on for hearing.

Mr. Pike said this was an appeal on behalf of the plaintiffs against an order of Mr. Justice Cave at Chambers, setting aside an order of the Master refusing defendants leave to issue a commission for taking the evidence of two witnesses on their behalf.

The learned counsel said the action was brought for fraudulent misrepresentation against the defendant company by the plaintiffs, who were also a company, and it was an action to recover £15,000, which was paid by the plaintiff company to the defendant company, upon, it was alleged, a number of false representations, which were set out in the statement of claim. One of the alleged misrepresentations, was that Guy & Co. and Stewart Brothers were separate and distinct firms, whereas, in fact, they were not. Another alleged false representation was that each of the firms was abundantly solvent, that Guy had a large property and that Stewarts were making £40,000 a year profit. Instead of that it had turned out that Guy suspended payment with a large deficiency, as had also Stewart Brothers. A material witness in the case was a Mr. Benn, who resided at Mobile, Alabama, and plaintiffs particularly wished to have him examined and cross-examined at the trial. On the other hand defendants wished that he should be examined by commission, and this Mr. Justice Cave, reversing the Master, had ordered. Hence plaintiff's appeal.

Mr. Tyrell Plaine, for the defendants, contended that, *prima facie*, a party and especially a defendant, was entitled to a commission for the examination of a material witness, who was out of the country, except in certain particular cases, where, in the interests of justice, the importance of having a witness examined and cross-examined in this country outweighed the inconvenience of bringing him from abroad. Having cited decisions to bear out his view, the learned counsel said in this particular case the defendant, who was called upon to defend himself, had shown sufficiently by his affidavit that it was impracticable, although perhaps not absolutely impossible, to bring Mr. Benn over to this country to be examined. Mr. John Stewart in his affidavit, said Mr. Benn was carrying on his business and was permanently resident at Mobile, and in his opinion would not come over to this country.

After considerable argument the Court directed that the matter should stand over, to enable a better affidavit to be filed, showing the impossibility of getting Mr. Benn over to this country. —*London Timber Trade Journal.*

An Australian Pen Picture.

Wood and Iron gives some valuable pointers about the Australian timber trade, saying that "as Australia is a large and growing market for lumber from this coast, a description of the lumber markets of the antipodes may be found interesting to those in the trade. The timber areas of Australia, which furnish trees from which the native lumber is made, are all situated on the coast between the shore and the crest or the coast range which extends along the whole eastern side of the continent—from southern New South Wales to northern Queensland. In this timber belt there are about seventy saw mills from small to large, and all the lumber used throughout this extent of country is of local manufacture. The lumber trees of this belt are cedar (so-called), various kinds of pine, and black butt (a species of eucalyptus) from which a good quality of hardwood lumber is made. The prices of native lumber vary in different places, and it sells in Sydney at the following rates when reduced to our money: native cedar $7 @ $8 per hundred feet, pine $5@ $6, and black butt, $3@ $4 per hundred. In New South Wales the duty on foreign lumber is 24 cents per hundred feet, and in the other colonies it is higher. The lumber belt of Australia is pretty well culled throughout its limited extent, and in a very few years all the Australian colonies will have to depend wholly upon American lumber. When that period arrives, Australia, including New Zealand and South Pacific Islands, will form by far the best market in the world for American lumber, and its prospective value should not be underrated."

Ottawa Shipments of Lumber.

[Reported for THE LUMBERMAN by T. W. Hotchkiss, U. S. Consul.]

Shipment of forest products from Ottawa for the 3 months ending June 30th, 1888, as declared through the U. S. Consulate.

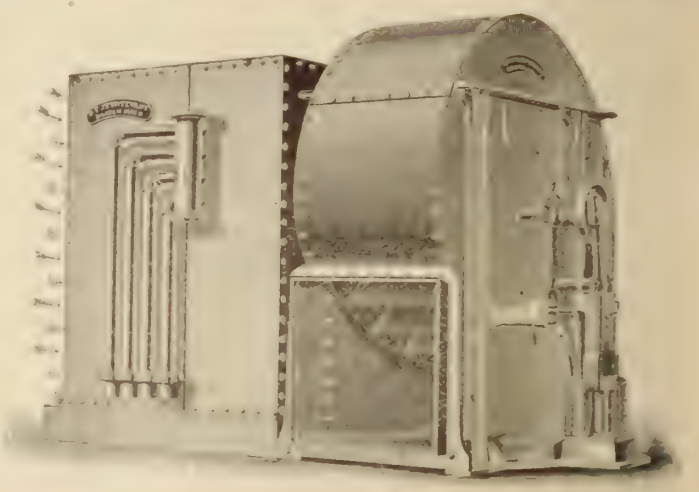
The Sturtevant System of Heating Wood-Working Establishments.

The subject of heating is one that is of interest to every wood worker, and as it is often the case that the stable door is closed after the horse is stolen, so it may be wise now that the back of a very severe winter has been broken, to consider how we might keep ourselves more comfortable and thereby be enabled to do better work. The primary consideration to which every wood-worker has to give attention in deciding upon the means of heating, is that of danger from fires. The inflamible nature of both buildings and stock is such that any protection against fire, results in a corresponding decrease in insurance rates. Stoves and furnaces although so often used are too obviously dangerous, while steam piping as it is often put up in a mill cannot be relied upon with absolute security. To avoid all danger wood work must not be exposed to a temperature equal to that of live steam of 85 lbs. pressure. Any means of heating which removes these objections has claim to introduction, provided it is equal to direct steam-heating in other respects that should be carefully considered by every interested party.

It is well known that the most certain way of heating a room or building is by securing a circulation of heated air within it. This the direct steam heating system is incapable of doing, and for this reason it is slow of action in heating up a cool building. A forced circulation of the heated air overcomes this difficulty and renders the system positive, for the air by means of ducts, flues or pipes is conducted to any desired points and compelled by the pressure behind it to do its work of heating by circulation. The only satisfactory means of compelling the air is by means of a fan of suitable construction.

From the nature of work carried on in them, wood working shops are generally provided with a system of shafting from



THE STURTEVANT STEAM HOT BLAST APPARATUS.

which such a fan may be driven. In some cases, however, where heating is desired such arrangements may be lacking and an independent engine is required for fan propulsion. Such an engine may be connected directly to the fan shaft and all loss of power through intervening shafting and belting thereby avoided. In fact, all things considered, it will be found preferable as a rule to drive the fan by a direct connected engine. It then becomes independent of any other source of power, may be run at any speed and at any time. The ordinary objection raised to this means of propulsion is that it costs to much. But a moments consideration will show that it costs practically nothing to drive the engine when the exhaust steam is utilized (as it always should be) in the steam heater connected with the fan. The heating power of live steam 70-lbs pressure, is only about three per cent. more than that of exhaust steam, hence pound for pound it makes but little difference in the expense which is employed. For this reason the engine cylinder may be considered as simply an enlargement of the steam pipe on the way to the heater, and the exhaust steam leaving it practically as efficient for heating as live steam direct from the boiler. The fan for propelling the air should be of the type which delivers the air around the periphery, for the disc or propellor fan cannot force air against pressure and often becomes negative in its effect when exposed to a strong wind. The heater fan and engine for this work are usually made up into a combined apparatus. Through the courtsey of Mr. B. F. Sturtevant, of Boston, Mass., who was the first in the country to put such an article on the market, a cut of his "Steam Hot Blast Apparatus" is here presented. He has been the pioneer in the introduction of the system to meet the requirements of which his apparatus was designed. The direct connected engine is stiff and substantial, of good workmanship and capable of running at high speeds. The fan meets the requirements of a ventilating fan, namely, abllity to handle large volumes of air at low pressure with the

expenditure of power. The heater, however, is the most distinctive part of the apparatus. It consists of a section of hollow cast iron section or bases divided by a diaphragm midway of their length and into which is screwed a triple verticle row of wrought iron pipes which by means of horizontal connecting pipes at the top (seen in the cut of the heater) serves as a means of communication between the ends. Steam is admitted at one end of these sections by independent supply pipes and finds its way up over and down through the pipes of the other end of the section whence it is removed by means of a steam trap. This arrangement insures a positive circulation of the stream through the entire heater.

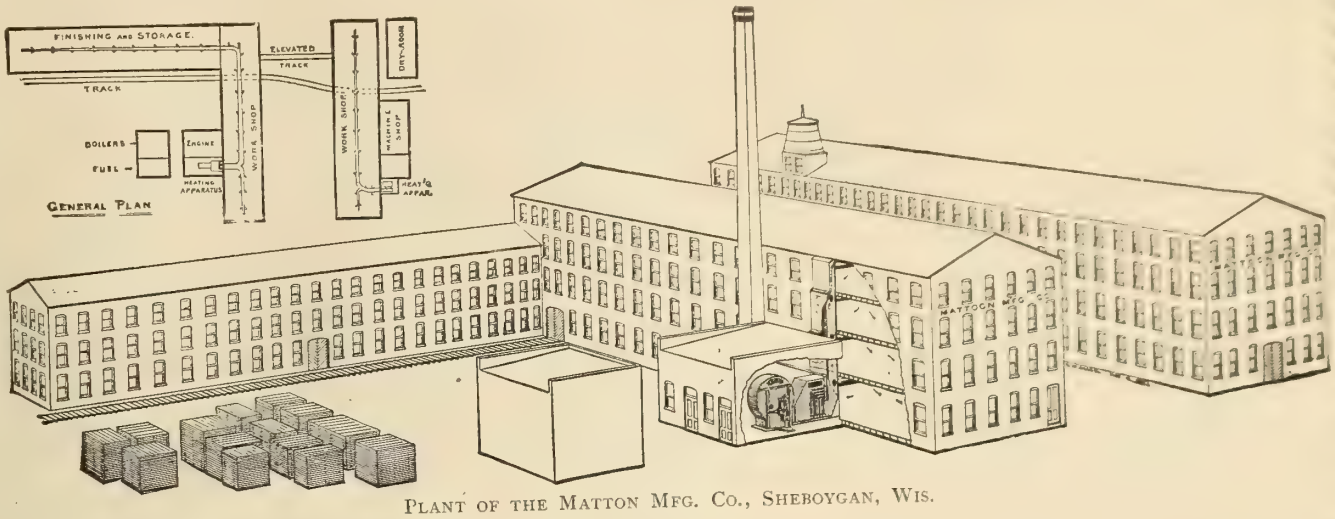
Air from out-of-doors is led by means of suitable passages to the end of the heater (or air when pure enough may be taken from the apartments in which the apparatus stands) through which it is drawn by the suction of the fan, the inlet of which connects with the heater. The steam pipes are so arranged that the air is compelled to take a more or less zig zag course in passing between them, being thereby brought into intimate contact with every foot of pipe. The result as one of the marked characteristics of this method of heating. The constant bringing of cooler air in contact with the pipes causes a condensation of the steam much greater than that which takes place in the open radiator. The amount of heat given out is measured by the weight of steam condensed, hence the greater the amount condensed per square foot, the less the number of square feet required to do a given amount of heating. In the "Sturtevant Hot Blast Apparatus" this efficiency is increased three to five-fold, or in other words 66 2-3 to 80 per cent. of the pipe is saved when the system adopted in place of one of direct radiation by means of steam coils strung around the rooms. Furthermore, instead of having air cocks and valves all over the building, and steam pipes liable to leak, freeze or cause a fire, and to which an engineer must give the closest attention, there are required in this system only a few valves on the engine and heater, and these are but a few feet apart.

The entire heater (pipes and bases) is enclosed in a steel plate jacket, entirely removed from wood work and the air leaving the blower mouth is only of moderate temperature. This point is of special importance, when the apparatus is used in a dry kiln, the reduction in insurance rates often being sufficient to pay the interest on the cost of the plant.

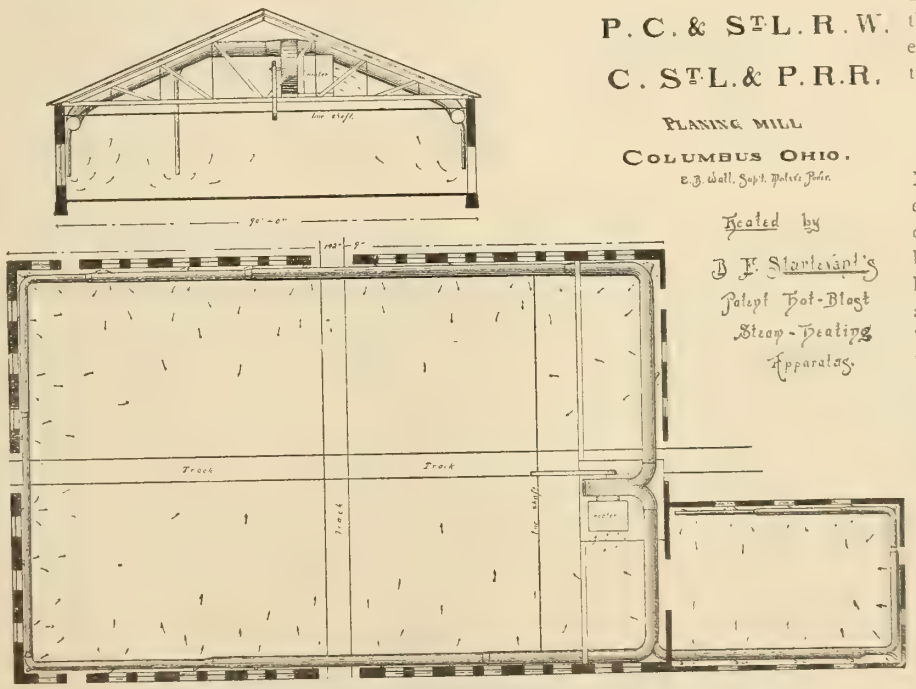
The heated air discharged from the mouth of the fan is conducted to the various parts of the building by a system of pipes or flues dependent in their arrangement upon the construction of the building and the use to which it is to be put. The entire apparatus is very compact and occupies but little space, can be made of any desired form and placed in any position. In one story shops the monitor pitch in the roof affords an excellent place for the apparatus, entirely out of the way, leaving the floor unobstructed, where such location is not possible the apparatus may be placed in any convenient position within the building or in the basement, when such exists or (as is very often the case) in a small special building adjacent to the main building.

The manner of warm air distribution in wood-working establishments is very clearly shown in the accompanying cuts which represent two decidedly different classes of structures. The one story building is the planing mill of the P. C. & St. L. R. R. at Columbus, Ohio, and forms one of the plant of six independent buildings recently fitted with heating apparatus by B. F. Sturtevant. The other cut illustrates, as arranged by the same party, the extensive furniture factory of the Matton Mfg. Co. of Sheboygan, Wis. These buildings, among many as heated by the Sturtevant system, have been chosen as typical of their classes. The former stands for the ordinary class of mill buildings of one story with pitch roof. In this case the apparatus is seen to be well out of the way, interfering with none of the machinery and being drjven direct from line shaft. The air is distributed through a system of galvanized iron pipes extending entirely around the interior of the building close to the walls and just below the level of the eaves. The complete circuit made by these pipes insures an equal and constant distribution of the air, any lack from one direction being made up from the other direction. Economy of material as well as more uniform pressure is secured by gradually reducing the sizes of the pipes (proportionately to the outlet from them) as they recede from the blower. The position occupied by these pipes is such that they are entirely out of the way, interfering neither with workmen, shafting or belting. From these mains the heated air is delivered through small verticle pipes extending down to within a few feet of the floor. By proper designing the velocity of the air, and the relative area of the pipes is such that the air is discharged with just sufficient impulse to fall to the floor which is thereby warmed. The natural circulation caused by the cooling action of the outer walls aids in this action as it also does in causing the warm air delivered from the pipes to move gradually towards the center of the building and thence to raise to the pitch of the roof where it may be allowed to escape if desired.

By placing the heating system near the outer walls the vulnerable point is attacked, and currents of cold air through crevices in the walls must encounter a warm body of air before reaching the workmen. Dampers or registers may of course be placed in the outlet pieces to regulate the delivery of the air.



PLANT OF THE MATTON MFG. CO., SHEBOYGAN, WIS.



P. C. & ST. L. R. W. PLANING MILL, COLUMBUS, O.

Although as originally designed provision was to be made fortaking fresh air from out of doors and passed it through the heater, yet up to the present time, all air has been taken from within the building itself. Owing to the comparatively small number of workmen in such shops the fresh air which enters through cracks, open doors and windows, keeps the atmosphere sufficiently pure and decided economy is secured by repeating the already warm air. The amount of steam required in the heater is proportional to the number of degrees through which the air is heated. If then air of 60 degrees temperature can be taken from the building in place of air at 0 degrees from out of doors, and if in either case it is to be heated to 120 degrees there will be a resultant saving of 50⅔ in the amount of

The plant of the Matton Mfg. Co., is representative of that class of buildings devoted to the manufacture of various articles from wood, being comparatively narrow with consider[illegible] longitudal extent, and having several floors. As will be seen by the small plan a separate apparatus was provided for each building [illegible] driven by a direct connected engine in any projections within the rooms, a deliver[illegible] building and the pipe main for the various floors are taken out from this, the vertical flue being proportionally reduced in area. On account of their narrowness a central distributing pipe was adopted from which the air is delivered through properly spaced outlets. This arrangement results in the greatest saving [illegible] relv securing both [illegible] In both cases here [illegible] Hot Blast apparatus is so closely combined that no steam piping is required throughout the building, and all valves are near at hand. Economy [illegible] one-third to one-fifth the pipe is required that would be necessary in a system of open steam coils in the various parts of the building. It costs nothing to run the engine for the exhaust steam is used in the heater. Safety — All the steam pipe is enclosed in a steel [illegible] from proximity to any wood work and [illegible] from fire is absolutely avoided. The le[illegible] often pay the interest of the plant. Efficiency — [illegible] the heated air reaches all parts of the bu[illegible] pants are not only warmed but when desired are provided with constant changing fresh air. [illegible] tem is under immediate control. [illegible] by the dampness or by c[illegible] the engine, [illegible] ent upon [illegible] the heater.

The Sault Ste. Marie Canal.

The great water power canal at Sault Ste. Marie is finally a [illegible] fact. At a very enthusiastic meeting [illegible] of the $100,000 asked from the [illegible] as a bonus, was cheerfully sub[illegible] with a like sum from the LaCrosse syndicate. The amount necessary for start will be [illegible] The work begins on the 16th inst., and will be pushed to a final com[illegible] men and money will accomplish the work and it is anticipated that it will be finished within a year. The undertaking is a great one, and in magnitude the "Soo" [illegible] canal will far exceed anything of the kind on the continent. The canal is [illegible] 14,100 feet; average width [illegible] a depth of fifteen feet. The mill pond to this great raceway is quite large, being 32,000 square miles in extent, viz., the whole of Lake Superior. This is beyond question the largest mill pond in the world, and affords an exhaustless supply of water for the multitude of industries pr[illegible] Apart from the possibilities of Niagara, that of Sault St. Marie far transcends all the world beside. The canal will give 18,000 horse-power and has a current of four miles per hour. Its course runs back of the present village, but within a few years the "Soo" will be be densely built up, so as to place the canal in the center of the fast growing city. The work of making it will be one of great labor, as for 2,000 feet it will have to be cut through solid trap rock. But the work when completed will be one for countless ages to come, and as a manufacturing centre, Sault Ste. Marie will have no successful rival in the world.

The Perils of Stream Driving.

The young man who was drowned last week while working on the drive of Mr. F. Tracy, on Wassataquoick stream, was named Pray, and belonging in a town on the St. John River near Fredericton, New Brunswick. It is said that he was one of the smartest men in the crew on logs, but he could not swim. He and a number of others were working on a bad jam of logs, and when it was about complete he told his companions to go ashore as he could easily complete the job himself, and that when the timber broke away one could better reach a place of safety alone then if there were more. Acting on this advice they left the unfortunate man in the perilous position, and when the jam broke they were horror-stricken to see their comrade carried down the stream amid a rolling mass of timber lashed to fury by the foaming water. Down the stream he went till he struck another jam below, under which he was drawn and was never seen alive again. The body was soon found bruised and disfigured, and was sent to his home in the province. For some years past there have been more or less men drowned on that stream, which is said to be one of the most dangerous rivers for the lumbermen in the State. We are informed that fourteen men from the provinces who have lost their lives in this way are buried on the banks of this mountain torrent, yet no blame can be attached to anyone.

SQUARE TIMBER.

A Big Cut of the Valuable Product.

The amount of "square timber" taken out of the limits on the Upper Ottawa during last season, and now coming down the river, is larger than the cut of any previous season for four or five years.

Most Ottawa people know exactly the difference between ordinary timber or logs, and square timber. The ordinary timber or logs go to the saw mills; the square timber doesn't, but travels straight from the forests to the English markets. The logs are trees cut down cleared of their boughs, lopped into convenient lengths and rafted with their bark on to the saw mills, where they are sawed into planks. Square timber is the outcome of the selection of the finest trees on limits, cut down, cleared and hewn square with axes as they lie. Then these enormous sticks, often sixty or eighty feet in length, are rafted clear down to Quebec without touching the sawmills. There it is loaded on ocean vessels and shipped to Liverpool and other large ports. In the English market it brings a big price, pine lumber of the best quality such as is taken out of our forests in square timber being eagerly sought for.

THIS YEAR'S SQUARE TIMBER.

The increase this season in the square timber cut is due to the big demand in England for No. 1 grade, red and white pine lumber, and some of the rafts taken out this summer contain the finest quality of pine seen in the shipping booms at Quebec for a number of years.

The following is a correct list of the firms who have taken out square timber this season on the Ottawa river and its tributaries, with an approximate of the number of cubic feet in each firm's output.

Name.	*Square White Pine.*	*Waney White Pine.*	*Red Pine.*	*Total.*
(Where made)—NIPISSING.				
E. D. Moore	155,000	70,000	.....	225,000

F. Kavanagh	30,000	.....	.....	30,000
QUINZE.				
Klock & Son	150,000	100,000	60,000	310,000
MISSISSIAGA.				
Klock & Son	100,000	50,000	.....	150,000
COULONGE.				
J. & G. Bryson	50,000	15,000	60,000	125,000
	1,420,000	745,000	365,000	2,530,000

This timber is worth apsroximately 25 cents per foot taken all in all, so that the above estimate represents between $600,000 and $700,000. In addition the above estimate of timber taken out last winter, and which is now on its way to the Quebec market, there is also a large quantity of timber cut in the season of 1886-87 coming down. Among the firms who have this old timber coming down are Barnett & Mackey, T. Mackey, Alex. Fraser and Booth, Hale & Co.

STOCK AT QUEBEC.

The following rafts are now in Quebec, on hand and sold: Booth, Hale & Co., a raft of 1886-87 timber containing about 150,000 feet, sold for 38 cents per cubic foot; and A. Frances a raft of timber cut on Whitefish river of about 150,000 feet sold for 31¼ cents per cubic foot. The prices obtained for these two rafts are unusually large and the timber in them is considered to be the finest that has come down the Ottawa in ten years. Alex. Fraser has 300,000 feet in the market yet unsold, Barnett & Mackey 180,000 feet of their Petewaw timber and T. Mackey 130,000 feet all of which will fetch good prices. There is now about 700,000 feet of timber in the hands of the Quebec firms for sale, and the lumbermen say that inside of two months not a foot of square timber will be for sale, as all the old timber which was stuck and held back last season has this year been disposed of for good pr Nearly all the square timber is being driven down the Ottawa this season. Only a portion of Alex. Fraser's last year's cut, E. D. Moore's Nipissing timber, and a small portion of Klock & Son's cut are being brought down by rail.—*Journal.*

THE BIG RAFT SUCCESSFULLY LAUNCHED.

The 24th of July was the time set for the launch of Robertson's great timber ship on the Joggins shore, and the effort was made with the greatest success. Thousands of people, some from very long distances, were present to witness the success or failure of the undertaking. The size and general appearance of the structure have already been outlined in THE LUMBERMAN, hence it is only necessary to give it a passing description. There are no masts, but the ship, if such it can be called, has stern and stern posts of tamarac and a rudder of spruce. The raft, as completed, is 592 feet long; its greatest depth is 36 feet and its extreme width 54 feet. There are 21,300 pieces of timber in it, equal by estimate to three million feet of lumber. Its value, at the regular price of piling delivered on the Joggins shore, would be about sixty cents per stick, or $13,000. The value in New York at current prices would be say five cents per lineal foot, or $2 per tree—over $40,000. When the cost of construction and towing is paid a fine margin will be left, barring accident, notwithstanding the export duty collected and the Customs duty on chains and wire.

Mr. Robertson, who built the raft, says it contains 41 tons of chain and four miles of steel wire, which it is hoped will hold it together in spite of any possible strain at sea. It is much more strongly secured than the one lost on the passage to New York. Two huge chains extend from end to end through the middle of the raft and one passes through it transversely at every ten feet of length, while steel wire passes round the whole structure at like distances, the whole system of chain and wire being connected together.

A spectator says the raft started almost as soon as the work of wedging up commenced and ran 2,000 feet after headway was secured in less than a minute. A tug from St. John towed it out some distance and anchored it, after which the proprietor, who is described as the happiest man in Nova Scotia, drove twenty miles to the nearest station and telegraphed to Boston and New York for the big tugs, one of which he is procuring in each city.

Wood for Decorative Purposes.

It is evident that much as we know about woods there yet remains much to learn that may be of value in the arts.

The secret of making good veneers which will not warp is only now becoming known, and until lately it was considered impossible to emboss wood; but now beautiful embossed panels, whose work resembles carving and whose richness compares favorably with the more costly art, are found in many places. In these the original patterns are carved by hand, and from these molds are made on which the wood is placed after being properly softened. The wood in these molds is then submitted to 250° of heat and subjected to great pressure. Such a pressure effectually prevents all shrinkage.

Wood may be cut as thin as the 300th part of an inch, but in this state it is not useful. That which is cut to the thickness of the 100th or the 150th part of an inch and lined with paper is used for the decoration of walls and ceilings. This neither shrinks nor swells, there not being enough of it for the atmosphere to lay hold of. If it is desired to place such a veneer upon a wall, all holes and cracks must be filled up with plaster of paris, and being glue sized, the wall is ready for the wood in panels. The veneers are made damp with a preparation of glycerine and water which softens them, and when dried leaves them pliable.

A checkerboard pattern of curled maple is about as thick as a piece of cardboard. To produce this strips of wood are first woven in and out and then subjected to heat and pressure, which makes a smooth body, varied in hue as if it were made of two kinds of wood.

Cherry, oak and mahogany are highly esteemed for veneers. Occasionally these are used in bookbinding. Poems by Pope and Jean Ingelow issued last year were enveloped in a covering of wood and tied with different colored ribbons.—*Exchange.*

EXTENSIVE SALE OF LIMITS.

As announced by advertisement in the last issue of THE LUMBERMAN the big sale of the estate of Hamilton Bros., consisting of 1,700 square of timber limits and estates, at Hawkesbury, took place at the Russell House, Ottawa, on July 6th. Next to the recent sale of timber limits by the Ontario Government at Toronto, it was one of the largest gatherings of wealthy men ever brought together in Canada. It has been estimated that the combined capital of those present would foot up to the enormous sum of seventy million dollars.

Prominent among those present were: Messrs. R. Hurdman, G. B. Pattee, E. B. Eddy, E. H. McLaren, William Mackay, P. White, H. Conroy, Hiram Robinson, Alex. Fraser, Westmeath, J. Saxe, Albany, N. Y., John Monroe, Hawkesbury, C. F. Gedee, R. Klock, Geo. Perley, William Kennedy, R. Stewart, R. Nagle, Hugh Grant, P. Colton, Wm. Kennedy, Olive Latour, Thos. Mackie, H. K. Egan, R. L. McLaughlin, Arnprior, W. C. Edwards, A. Foster, A. McCormick, R. Cox, J. Gilmour, Sheriff Haggart, Chas. Reid and R. Rawley.

The property is divided into two districts one being 750 square miles on the Dumoine river and its tributaries, the Black and Schyan, and the other consisting of 935 square miles on the Gatineau and its tributaries. These limits have fine farms, plants and stock in connection with them, in addition to which there is a large property at Hawkesbury, known as the Hawkesbury mills, used for manufacturing timber from above mills. These mills are situated on the Ottawa river, Ontario, mid-way between Ottawa and Montreal consisting of four saw mills with lath and scantling mill additions, driven by water, with sawing capacity of over 2,000,000 feet weekly. Extensive wharfs and piling space for forty million feet of lumber. Large brick dwelling houses with extensive grounds; ditto stone house, and seven good houses built of wood, and one hundred tenements now occupied by employees. Valuable farm in the vicinity of over 1,000 acres, a large portion of which is covered with excellent timber.

The Dumoine river limits proved to be the favorite property. Although worked for some twenty-five years there is still a large amount of valuable timber to be cut. The Gatineau limits have been worked for over fifty years, and were not looked upon with much favor.

The whole property was put up in a lump to start with, but as the only bid—$200,000—came from Mr. W. C. Edwards, the property was taken down, the reserve bid being $650,000:

The Gatineau limits were then put up in one parcel. W. C. Edwards made the first bid—$15,000. Mr. Carter, agent of the Rathbuns of Deseronto bid $16,000. Mr. Edwards and Mr. Carter bid odd and even up to a hundred thousand dollars. Then E. B. Eddy bid $101,000. On it went up to $114,000 when John Gilmour bid $115,000. Up it went still, until Mr. Edwards bid $128,000. There was silence, and the Gatineau limits went to Mr. Edwards. The price included the lumber only, the plant, stock and provisions on the limits being extra, and having to be taken by the purchaser of the limits at scheduled prices. Following this sale the Dumoine limits were put up and after a lively competition were knocked down to H. K. Egan of the firm of W. R. Thistle & Co., for $396,000, exclusive of plant and supplies, worth about $30,000, which are to be taken at a valuation. It is said that Mr. Egan made the purchase on behalf of a syndicate composed of himself, W. R. Thistle, Hiram Robertson and Robert Blackhorn.

Mr. Edwards, M.P., proposes to commence cutting operations this fall on the limit he purchased on Friday. Lumbermen say he has got a bargain.

The Hamilton Bros. estate, including mills, limits, farms, together with the private estate of the late Hon. John Hamilton, is valued at two and three quarters million dollars. There are seven heirs, among whom the estate will be equally divided. The youngest son of the late senator has obtained a commission in the Imperial service. He is applying to be appointed to the 13th Hussars, a crack English corps. His income, it is said, will be $30,000 a year. The engagement of Mr. Caledon Gilder, of Hawkesbury, one of the trustees of the estate, and Miss Hamilton, daughter of the late senator, is announced.

The townspeople of Hawkesbury are keenly agitated over the sale of the Hamilton Timber limits. Hawkesbury a pretty village of 2,000 inhabitants situated on the Ottawa opposite Grenville, about half-way between Ottawa and Montreal, has practically been built up by the Hamilton business. In the advertisement offering the Hamilton property for sale, it is stated that there are four sawmills, a farm of 1,000 acres, six or eight good houses and 100 cottages to be disposed of. Besides the inmates of these cottages, who have all been dependent on the Hamilton business, there are scores of other families dependent on the business. If the business is stopped there wont be much left of Hawkesbury. It is stated that Hawkesbury people fully realize this, and the real estate is going a-begging in the place. There is little chance of any lumber business to speak of being now done at Hawkesbury. The timber limits have been sold to parties who do not seem to want the Hawkesbury mills. At any rate, no bid was received for them on Friday. Certainly Mr. Edwards, who has bought half the limits, does not, as he will work his timber at his own mills at Rockland. The syndicate which bought the other half of the limits, those on the Dumoine, does not seem to want the Hawkesbury mills either. In default of attached limits the mills will be of comparatively little value. The firm of Hamilton Bros., composed of the late Senator John Hamilton, of Montreal, and Robert Hamilton, of Quebec, started sawing lumber at Hawkesbury fifty years ago.

LABOR TROUBLES AMONG LUMBERMEN.

Following the celebration of "our natal day" throughout the North Shore, Georgian Bay and Midland districts, there came a re-action in the form of a strike among nearly all the mill hands in those localities. The strike is for a reduction of the hours of labor from eleven to ten. It is said that although the mill operatives commenced work at the first of the season it was not their intention to continue on the same arrangement as last year; accordingly negotiations have been going on for a reduction in the hours, and wages to be paid fortnightly instead of monthly as before. The lumbermen, it appears, would not entertain the proposition. During the last week of June a representative of the Knights of Labor visited Gravenhurst and tried to effect a settlement of the difficulties, but did not succeed. As the above was the ultimatum decided upon by the local organization and concurred in by the brotherhood generally, the next move was to go out on strike, which was done on July 3rd.

From latest reports nearly 2,000 men are now out, and the situation still continues without much change. A few of the mills have given in but the majority refuse to do so. The ranks of the strikers seem firm, and every man seems confident of victory. The mill owners it is understood, have asked the government for police protection for the men they are bringing in from Quebec and Michigan. How long this trouble may continue it is impossible to determine, but even if a settlement is made at once the loss to the lumber trade must of necessity be very heavy.

ANOTHER STRIKE AT THE CHAUDIERE.

The following particulars of the labor troubles at Ottawa are furnished by the *Journal* of that city:

"A stir was caused at the Chaudiere this morning by the shippers, carters and some of the pilers in the employ of Mr. J. R. Booth, going on strike. The strikers, some eighty in number, assembled in front of the office of the firm this morning instead of going to work, and Mr. Wilson the shipping foreman conveyed the demands of the men to Mr. Booth. It seems that among the Chaudiere lumbermen there is no scheduled scale of wages. Each firm pay their men what they think they are worth. Mr. Booth was paying the men who struck $6.50 a week and they demanded $7 and $7.50 a week according to their positions. Mr. Booth refused to comply with the demand and paid the men off.

"The strikers showed a disposition to be troublesome afterwards. They threatened the shippers and pilers who remained at work. This threat had the effect of making quite a number of men quit work. Mr. Wilson, the foreman, tried to induce them to go to work again, but the men were afraid.

"The strike is in a measure caused by the lack of an understanding among the lumber firms as to the rates of wages. Messrs. Bronson & Weston and Pierce & Co. are paying pilers, shippers and teamsters from $7 to $7.50 per week while Messrs. Perley & Pattee and J. R. Booth are only paying $6.50 and $7 for men doing the same work. The strikers have no complaint except as to wages.

"The ball was started rolling the day before yesterday, when the wheelers of the Perley & Pattee concern struck for $7 a week, and after holding out for a day got what they demanded, with some exceptions. Then the pilers and shippers employed by Perley & Pattee and J. R. Booth, began grumbling about their wages, and announced their intention of demanding the same wages as Bronson & Weston were paying their men. The strike this morning was therefore not a surprise.

"The strikers although very much in earnest and most of them fighting drunk have no organization and cannot hold out any length of time, but the ringleaders who know that they will not be taken back are doing their best to influence the other hands to strike and make the affair as big as possible. The lumbermen fear that the strike may spread through all the mills which are not paying the following schedule of wages, which prevails with Bronson, Weston & Co.:—Teamsters and shippers, $7 to $7.50 per week; laborers, $7: men in the mill from $7 to $10 according to positions; men in charge of the gates $9; edgers, $10; saw-filers, $10.50 to $15.00 millwrights, $12 to $18. The firms to which the strike may spread are Perley & Pattee, Pierce & Co., Hurdman Bros. and the E. B. Eddy Manufacturing Co.

Attention was directed to the mill gang by the organizers of the strike, and about two o'clock the 300 employees in the mill including sawyers, wheelers, loaders, edgers and carriers struck work. Mr. Levi Booth foreman of the mill asked the men if they were going to work. They replied they were not unless their demands were acceeded to. The mill was accordingly shut down. The men fully four hundred in number then assembled on the street in front of the mill."

A Floating Sawmill.

Along the bayons and lagoons of Florida grows some of the finest timber in the South, much of it in places entirely inaccessible until J. L. Maul & Son hit upon the plan of constructing a floating sawmill. This idea they carry into execution, and their mammoth mill, which now lies at the banks of Burton & Harrison's hammock, near Palatka, according to the *Southern Lumberman*, a marvel of mechanical ingenuity. It has a length of eighty and a breadth of forty feet, and is so solidly built that the motion of the machinery has no more effect on it than if it were built on solid land. Although it stands five feet out of water, its draught is only about a foot and a half, which permits it to be taken into the shallowest lagoons, where timber could not be floated. It is equipped with the latest machinery, planer, lath machine, shingle saws, and a fine forty-horse power engine and boiler. On the hurricane deck is the office for the proprietor, while the cook house, where the men board, is in the center of the deck, which is otherwise free for the piling of lumber, the machinery being all below it. This floating mill has so far proved eminently successful, exceeding the expectations of the proprietors in this respect, and is probably the pioneer of numerous craft of the same kind.

EXCHANGE ECHOES.

Chicago Timberman.

Puget Sound lumbermen are betwixt and between on the question of free trade in lumber. "They do not want free trade nor do they want a continuation of the war tariff." British Columbia has a large lumber trade in Australia, Japan, China and South America, with which the Buget Sound millmen seek to compete, but British Columbia lumbermen have the advantage in being able to sell at lower figures. These countries are the legitimate markets for Puget Sound lumber and the removal of the tariff would enable our millmen to successfully compete with their British neighbors. There is a strong measure of sensible reasoning in this, as these Puget Sound men cannot ship their board lumber east, so from this standpoint they are in favor of free lumber. On the contrary timber for car sills, bridge chords, etc., find a ready market in the western states and in consequence of the tariff prices keep up. So the dilemma presents the two horns, with the free trade in lumber one seemingly the easier of the two; but "you pays your money and takes your choice."

Chicago Timberman.

Our Manistee correspondent touches upon a feature of trade not commonly noticed in the lumber journals—the foreign demand which comes through Canadian sources. He speaks of a call for "longitudinals," an item not frequently discussed, but an important article in the list of material used for railway building in England, where the bed work of the road is laid on solid masonry; and the necessity exists for something that will "give," on which to fasten the rail. The longitudinal laid on the stone work averages 32 to 34 feet in length; in dimension 5x7, as a rule, and has to be clear stuff—good lumber.

Northwestern Lumberman.

Last week mention was made in these columns of a man in a drive who was drowned because he could not swim. To follow the drives is a dangerous vocation for a man unable to swim. A treacherous log is liable at any time to give a driver a cold bath, in a deep and wide bath tub, and it is sometimes not only necessary for him to swim upon the surface of the water, but under it, in order that the swift running logs may pass over him. No man on the drives can be to much of a water duck for his own safety. Swimming is taught too little everywhere. Every boy and girl should be taught how to swim as well as to play base ball and the piano.

Northwestern Lumberman.

The reported let up in the movement of pine stumpage is the result of the dullness in the lumber trade and the weakening of prices. With lumber stocks about $2 a thousand on the average less than last season, and the constant apprehension of a still further decline in the thermometer of the market, there is a widespread opinion that prices for stumpage must also come down from the roof upon which they have been elevated by the speculative sentiment the last few years.

NEW WATER JACKETED
CUPOLA FURNACE.
B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.
WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.
Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

IN LIQUIDATION.

NOTICE.

The undersigned will, up to the

7th of AUGUST,

RECEIVE TENDERS

for the purchase of the

HAWKESBURY MILLS

PROPERTY AND PLANT,

the latter of the value of some $30,000, together with the

SAW-LOGS and BOOM TIMBER

now lying on the Ottawa river and bays thereof, between the mouth of the Dumoine and Hawkesbury Mills, and in Leamy's Lake, say about 150,000 pieces of White Pine Sawlogs, 12 ft. 8 in. and 13 ft. 8 in. long, and 5,000 pieces Red Pine Sawlogs, chiefly 16 ft. 8 in long, and some 200,000 lineal feet of flat timber, at a price per piece or standard for sawlogs and a price per lineal foot for the flat timber, all free of duty and delivered at Hawkesbury this season, and season of 1889.

Parties wishing to tender for logs and timber separately from mills may do so at so much per piece for the sawlogs and so much per foot for the timber, and take delivery of the same wherever they may be lying at the time of sale, count and measurement, where not already known to be established by sellers and buyers at nearest dividing booms.

Separate offers for logs and timber above Chaudiere, and logs and timber between Chaudiere and Hawkesbury Mills will be entertained, but tenders for the whole quantities afloat will receive first and more favorable consideration, and no tender for any other sub-division of the logs and timber will be received.

In all cases the lowest or any tender will not necessarily be accepted.

Terms for Sawlogs and Timber sold separately for mills will be cash on delivery thereof to purchasers, whenever such delivery may take place. More favorable terms will be granted in the case of a sale of the Hawkesbury Mills property and plant, together with the Logs and Timber.

CALEDON F. GILDER,
For Executors.

SEALED tenders addressed to the undersigned, and endorsed "Tender for Coal, Public Buildings," will be received until Friday, 10th August next, for Coal Supply, for all or any of the Dominion Buildings.

Specification form of tender and all necessary information can be obtained at this Department on and after Wednesday the 18th instant.

Persons tendering are notified that tenders will not be considered unless made on the printed forms supplied, and signed with their actual signatures.

Each tender must be accompanied by an *accepted* bank cheque made payable to the order of the Honorable the Minister of Public Works, *equal to five per cent.* of the amount of tender, which will be forfeited if the party decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted the cheque will be returned.

The Department will not be bound to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.

Department of Public Works, Ottawa, July 14th, 1888.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Heating Apparatus, New Departmental Building, Wellington Street, Ottawa," will be received at this office until Monday, 6th August, next, for the several works required in the fitting up, etc., of a Hot Water Heating Apparatus at the New Departmental Building, Wellington Street, Ottawa, Ont.

Specifications and drawings can be seen at the Department of Public Works, Ottawa, on and after Monday, 23rd instant, and tenders will not be considered unless made on the form supplied and signed with actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *fifteen per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract, or fail to complete the work contracted for and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order
A. GOBEIL,
Secretary.

Department of Public Works, Ottawa, 19th July, 1888.

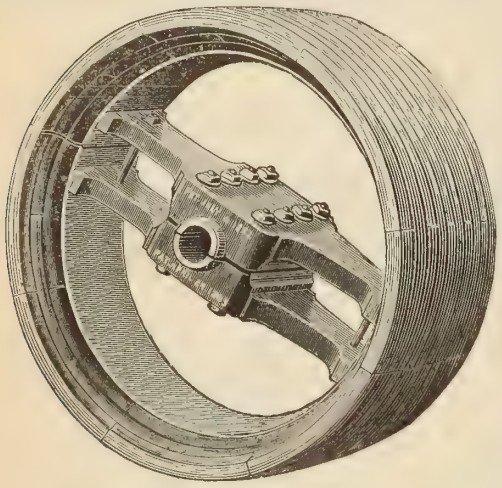
WM. FORSYTH,

PETERBOROUGH, ONT.

DODGE ⁜ PATENT ⁜ WOOD ⁜ SEPARABLE ⁜ OR ⁜ SPLIT ⁜ PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.

With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities:—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42
.30	2.43	1.69
.40	3.26	2.02
.50	4.38	2.41
.60	5.88	2.87
.70	7.90	3.43

Morin.—Appleton's Encylopedia of Mechanical Arts.

.60	5.90	2.90
.70	7.90	3.40

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are: It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus: The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

MANUFACTURERS of lumber in the south are beginning to acknowledge that the cost of manufacturing to them will steadily advance. One cause is that the producing territory is constantly receding from them. Another is that all the choice timber limits are in the hands of Northern speculators.

AN article has been patented, which it claimed possesses all the qualities as to hardness and durability of lignum vitæ and can be made of any soft wood. The process of manufacture consists of first saturating the wood thoroughly with an oily chemical compound of great penetrating power, and then subjecting it to a powerful compression, which so increases its density as to make it rival even iron in hardness.

FOR years Saginaw lumbermen have been in the habit of flooding the Chippewa river by means of dams in order to enable them to run their logs during July and August, thereby shutting the water off from a mill pond at Mt. Pleasant, Mich., leaving the pond dry for days at a time. This it is claimed has been the cause of much sickness, and the boards of health of the township will commence proceedings immediately to prevent the flooding. Other townships are expected to enter the contest, which promises to be an interesting fight, as many wealthy Michigan lumbermen are interested parties.

THE question of admitting Canadian lumber into the United States free of duty has lately been greatly exercising the House of Representatives. The probable fate of the bill is to be shelved in congress, and the Republicans hope when the question again comes up, the president elect will be one who will veto it, despite the favor of both houses. Canadians need not be overly anxious in the matter. While we have a great reserve of forests yet, the time is rapidly approaching when the value of our timber will be vastly greater than now, and it would not be true economy to have it rushed off too rapidly.

THE shingle makers over in Michigan, says an exchange, are reported to be engaged in cutting up every scrap of timber they can get hold of, not even the stumps escape them. A machine has recently come into use which is moved into the woods and which slices shingle-length bolts off every decent stump within a radius of 100 feet. In this way, in the language of a Michigan man, the shingle mills are becoming the scavengers of the lumber region.

LEADING Ottawa saw-millers are considering the advisability of changing their motive power from water to steam, and it is said that other lumbermen about the Chaudiere are debating the same question. Their idea is that the waste and sawdust that is now discharged into the river would supply the necessary fuel, and therefore the expense would be inconsiderable, while the change would settle the sawdust nuisance, and the water power could be advantageously used for factories of different descriptions which do not afford their own fuel.

AMERICAN oak has achieved an important conquest in England, meeting with favor in all quarters, and the number of purposes for which it is called into requisition being extensive and varied. Large quantities are being used and prices are sufficiently firm to afford great satisfaction to those handling it, who are sparing no pains to educate the English public to a thorough appreciation of the value of the wood. The trade in mahogany from Cuba has also received an impetus, and there seems to be a constantly increasing demand therefor, as indicated by latest reports from the various centres of the timber trade.

ACCORDING to some American enthusiasts, Alaska will some day furnish timber for the rest of the United States, but a correspondent of the *Mississippi Valley Lumberman*, who has seen the country for himself, says such talk is all foolishness. One cannot deny, he says, that there is plenty of timber in Alaska—for there is. But such timber! Small, scrubby spruce, growing to a diameter of 16 inches at the butt, and raising a question in one's mind where the roots and the branches begin. That's the kind of timber Alaska produces. The hills and the mountains are covered with it, as far as the eye can reach, but for building purposes it is practically useless. A curious feature of that timber is that when it reaches a certain size, viz.: 16 to 18 inches at the butt, without any apparent cause it dies; and the forests are dotted with these trees.

ALTHOUGH recent British Board of Trade returns indicate a solid revival of business generally it is not pleasing to notice that the trade between Canada and the Old Country has shown a very decided decrease. British exports to the Dominion during July were 11½ per cent. below the returns for the same month of 1887, and for the seven months ending with July the decrease was 15½ per cent. Canadian exports for the same month show a decrease in July of no less than 20½ per cent., and for the seven months, 18½ per cent. Such a state of affairs would be a serious matter at any time, but occuring as it does at a period when British Colonial trade is expanding in a remarkable manner, it certainly becomes much more so. The best deduction that can be drawn is that our commercial community of interest with Great Britain is diminishing at an alarming rate, a result which should be, if possible, averted. Whatever may be the cause of the above noted diminution of trade, if allowed to continue, the result can not but be detrimental to our commercial interests.

THE growth of the Canadian lumber export trade may be exemplified by a few quotations from the official returns of the London, England, Board of Trade. Of sawn, split, planed or dressed lumber imported from the Dominion, for the half year ended June 30th, the quantity is set down at 177,286, and the value £408,150. During the corresponding part of 1887, the figures were; quantity, 108,438, and value, £251,864: while in 1886 they were 93,135 and £224,890, respectively. In hewn lumber, however, there was a big drop both in quantity and value last year, but this year's returns show an upward tendency. The total value of Canadian lumber, exclusive of hewn, exceeded that from the United States by £54,835. The only country that leads Canada in supplying the London lumber market is Russia, whose lumber entered at London up to June 30th, aggregated in value £927,956.

A MOST gigantic lumber "Trust" has been formed in the west, which controls the principal lumber interests of Minnesota and Wisconsin. Fred. Meyerhauser, the richest lumberman in the world is at the head of the combine. The syndicate is said to control about $60,000,000 invested in lumber and pine lands, and is backed by heavy capitalists of Boston. The agents of the syndicate are scouring the country to get all the stumpage land there is in sight. The scheme is to float logs from the Upper Mississippi down over the falls at Minneapolis and erect big mills on the lower river. It is understood that some of the Chicago railroads and some southwestern lines are encouraging the deal. It should be borne in mind in this connection that while "trusts" and "combines" are usually understood to mean associations for the purpose of keeping up or raising the prices of commodities, in the lumber business they are entered into for the purpose of lessening the cost of production.

OWING to the comparatively small cut of logs in the Ottawa valley winter before last, the output of the various Chaudiere mills was rather small, and this spring saw the piling grounds completely denuded, every stick of timber being sawed and shipped and yet the contracts were not all filled. Until the drive logs of last winter's cut came down this spring most of the firms had hardly enough logs to keep the mills running on day watch only. As a consequence of this shortage unusually large gangs of men were sent to the bush last fall and more logs were cut on the Ottawa than in any previous year. Most of the firms prepared for the emergency by increasing the capacity of their mills. Last year 390,000,000 feet were sawn. This year the output is estimated to be 405,000,000. Among the firms which are the heaviest purchasers for the American market for this district are: Shepherd & Morse of Burlington, Bronson, Weston & Dunham of Burlington, Rathbun Company, of Deseronto, the Canada Export Lumber Co. and a host of concerns on the other side of the line. The Bronson, Weston & Co., J. R. Booth and Pierce & Co. ship large quantities of first grade deals to England.

THE Manitoba *Free Press* had an article recently describing the timber resoures of Lake Winnipeg, which contains much valuable information. Not only are the islands in the lake, many of which are of considerable extent, covered with valuable timber, but its shores also, and especially in the neighborhood of the numerous rivers that empty into it. The various kinds of timber in the Lake Winnipeg region are spruce, tamarac, cedar, jack pine and white poplar. The tamarac supply, described as almost limitless in extent, must some day be of immense service in furnishing the railways of the Canadian Northwest and the Northwestern States with ties that are 20 per cent. more valuable than spruce ties. There are 4,207 miles of railway in Dakota, 4,789 in Wisconsin, 4,828 in Minnesota 5,539 in Michigan, and equal or greater mileage in many other states and territories. The railway mileage of the American Northwest is something stupendous, and to renew the ties every seven years will require almost unlimited supplies of tamarac. If navigation up Red River from Selkirk to Winnipeg were improved Manitoba should soon become a large exporter of tamarac ties. For the spruce, jack-pine and cedar of the Lake there should also be large demand. The jack-pine makes excellent shingles, and seven or eight million shingles made from it were exported from the Lake last year. The spruce and cedar are most valuable, and even the white poplar can be employed both for fuel purposes and, if necessary, for the manufacture of paper pulp. The extent to which the lumber industry on Lake Winnipeg has been developed already is by no means insignificant. The Selkirk Lumber Company at Fisher River cut 2,500,000 feet in 1887, and will cut 3,000,000 feet this year. Brown, Rutherford & Nilsson at Fisker Bay cut 1,100,000 feet in 1887, and their estimated cut for this year is 1,250,000 feet. Capt. Robinson

made a cut of 1,000,000 feet at Ebb and Flow Lake last year, which will just double this year. Mr. Jonasson, whose mill is at Bad Throat River, cut 1,225,000 ft. this year. James Corcoran's cut at Humbug Bay last season was 700,000 feet, but will be 900,000 ft. this season. Wood & Co. cut 460,000 ft. at Winnipeg River last year, and their cut for this year is estimated at the same figure. Brouse & Co. also cut 250,000 feet at Bad Throat River in 1887, and will cut 200,000 ft. this season. The total cut for 1887 was 6,700,000 ft., while that for 1888 is estimated at 8,975,000 ft.; that for 1887 realized, say, $74,250, while this year's cut is expected to bring $116,676. The cut for 1887 sold at an average of $11 a thousand; while that of 1888 is bringing $13 a thousand. It is true that the timber is not of a very large size, but that is its only drawback. There are many most valuable uses, like those which have been enumerated, to which it can be put, and is being put at present. Like the great bulk of our natural resources, its natural trade movement must be southwards and across the international boundary.

THE additions to their rolling stock that are being made on the principal railways, will do much to prevent this season the shortage of cars of which complaints were made at some points last year. There has always been more or less grumbling about the want of the accommodation and the charges on the Northern and Northwestern under the old management. Now that it has come under the control of the Grand Trunk it is to be hoped that things will run more satisfactorily.

THE tariff duty on lumber taken from the New Brunswick frontier into the United States, it is said, has been a dead letter until recently. The Kennebec, Me., lumbermen considered themselves aggrieved by this laxity in enforcing the protection of their interests, and took action in the matter. Their effarts, they say, have been successful, and the law will now be stringently enforced. The amount now collected is three times what it was before the lumbermen commenced the agitation.

REPORTS from Quebec indicate a satisfactory condition of the trade. The increased demand from Great Britain, combined with the diminished output following on the low prices of the last year or two, strenghened the market and enabled old stocks that had accumulated here to be worked off. This is likely to lead to Canadian operators paying more attention next winter to the European markets. The new arrangements as to loading timber are also having a beneficial effect in the city of Quebec.

UNTIL within recent years that portion of Ontario known as the Lake Superior region was a terra incognita. Now, thanks to the enterprise that has pushed through its rocky wilds one of the greatest railroads in the world, its capabilities and possibilities are being gradually made known. That it is rich in mineral wealth and that within its bounds are numerous tracks where the agriculturist, the dairyman and the stock raiser will, in the not far distant future, flourish, is beginning to be acknowledged. But there also the lumberman will find a wide field for his operations. The rocky and rough sections, as well as the more favored spots, are covered with a forest growth of no inconsiderable value. In some parts the timber is heavy enough for sawing, and a good deal has already been manufactured into lumber, whilst the lighter timber ensures a bountiful fuel supply.

ABOUT the middle of the month there was an important caucus of Republican members of the United States Senate at the residence of Senator Chandler. There was a long discussion as to the proposed Tariff Bill, which the Republicans have planned as a means of fighting the Mills Bill and making political capital for the Presidential election. The treatment of the lumber duty was debated in a lively manner with much difference of opinion. Some Senators from treeless states strongly advocated free lumber and the abrogation of the duty. Representatives of the lumbering States, on the other hand, were as strong for continued protection and for the maintenance of the lumber duty intact. It is reported that a compromise was proposed and accepted to reduce the duty by fifty per cent., leaving it at one dollar per thousand. Evidently the action of Congress in this matter is very uncertain, depending much more upon political than economical considerations. The great lumber trust with a capital of $60,000,000, which is said to be in process of formation in Wisconsin and Minnesota, may have something to say on the question, as well as on prices, output, wages, &c. It is notorious that such rings have considerable influence upon legislation among our neighbours, by the use of their system of "lobbying" and other devices, the secret of which is sometimes divulged after a time.

THE appeal to the Judicial Committee of the Imperial Council to determine the possessorship of the Crown lands of Northwestern Ontario—whether the title is in the Dominion or the Province—was argued very thoroughly. The question largely turns upon the nature of the Indian title and the rights acquired by its extinguishment. The Judicial Committee reserved judgment, which is to be given in November, a chief cause for the delay being the time required for obtaining from Canada copies of certain Orders-in-Council, which were considered to have an important bearing on the decision. It is not of very great importance to the lumbermen as such whether they have to deal with the Dominion or Provincial authorities, but it is high time that the point should be settled one way or the other, so as to put an end to the troublesome complications now existing and to facilitate operations in this district. The present uncertainty has impeded business, which will be lively as soon the judgment is decided, whatever it may be.

THE task of towing the great Joggins' or O'Leary raft from Nova Scotia to New York has been successfully accomplished. This immense mass of timber, valued at about $13,000, and consisting of 30,000 logs, varying in length from 25 feet to 200 feet, firmly bound with chains and strong iron wire, was guided into New York harbor through Hell gate, on Saturday, August 11. Naturally enough, the event was signalized by any amount of rejoicing, for not only had predicted failure been averted, but the result demonstrated the possibility of an immense saving in the cost of transportation. The trip occupied 11 days and the cost is estimated at about $5,000, so that, even allowing a pretty wide margin, the profit will be considerable, the raft being worth at least $40,000. Had it been conveyed by rail it would have required not less than fifty trains of fifty cars each to accomplish the transportation. The smaller forwarders and dealers have all along viewed Mr O'Leary's scheme with jealous distrust, and their representations to the government had the effect of inducing the Minister of Marine to promise that if the venture proved a failure, as the one of 1887 did, he would use his efforts to secure such legislation as would give him authority to prevent any more experiments of this kind. As it has passed beyond the realm of experiment into acknowledged practicability, it is now altogether unlikely that any measure will be seriously contemplated to prohibit future rafts on this plan being constructed. The railway companies and owners of coasting schooners, as well as the smaller forwarders and shippers, will doubtless feel aggrieved, but there does not appear to be any means by which they can help themselves. By care in constructing the raft or timber ship, and by launching it when reasonably fine weather may be confidently anticipated, there does not seem to be any reason why the O'Leary rafting system should not become an established custom. The main advantages gained by means of such a raft over the custom of employing coasting schooners are these: an ordinary coaster will only carry about 500 piles, and if any are over 60 feet long or 18 inches in diameter, not many of these vessels can load the logs through the ports. The big raft contained about forty-five ordinary schooner loads and many of the pieces were of too great a size to be taken in any schooner. The net cost of towing the raft is said to be $5,000, whereas at ordinary freight rates it would cost $21,000, thus showing a saving of $16,000 in freight alone. It is now said that another raft will be built and launched before the stormy weather of November arrives.

THE recent lengthy debates in the Senate and House of Representatives at Washington on the Mills Tariff Bill and the Fishery treaty should greatly enlighten the American people—if they read the reports—on the commercial importance of Canada, and the extent of our natural resources. As a contemporary puts it, the debate has been a first class advertisement for Canada. The average Yankee has hitherto had very hazy notions on this subject, if, indeed, he ever considered the fact of the Dominion's existence at all. But the strong anti-Canadian talk of such men as Senators Hoar, Sherman, Fry, Evarts, and others in their partisan desire to embarrass President Cleveland and the Democratic Administration, will cause, if it has not already created a different impression among the masses. These men, exaggerating possibly their real feeling, have raved and ranted about the great future in store for Canada, and how if the Democratic tendency to reciprocity in trade is allowed full swing, the Dominion will ultimately overshadow in trade and manufactures, as well as material wealth, the great Yankee nation. To avert such an awful catastrophe, as that the "land of the free and the home of the brave," should by any possibility have a neighbor equal or superior to her in this respect, the Senators seem to be united, but as to the means to be employed they differ materially. While some advocate a system of exclusion and non-intercourse, others boldly take the bull by the horns by proposing to ask Mamma England to hand daughter Canada over to Jonathan altogether, that her interests, destiny and growing importance may become a part and parcel of the great American republic. And on August 6th, Senator Blair introduced a resolution, which was referred to the Committee on Foreign Affairs "that the President be requested to open negotiations with the Government of her Britannic Majesty (in which the Dominion of Canada and the several political subdivisions thereof should be represented), with a view to the settlement of all differences between her Majesty's Government and the United States, and especially to the arrangement of terms mutually just, honorable and satisfactory for political union between the Dominion of Canada, or between any of the several provinces or subdivisions of the Dominion of Canada, and the United States, subject to the approval of the people of the Dominion of Canada, or of the people of any province or subdivision thereof, who may be included in such arrangement, and to the ratification of the United States, in such manner as Congress may prescribe; such political union to be republican in form and in accord with the general system and the constitution of the United States; and the negotiations may embrace such further treaties, compacts and alliances as shall be deemed necessary for the future peace, happiness, security and general welfare of her Majesty's Dominion and of the United States." But Brother Jonathan might as well spare himself the trouble, for however strong may be his desire to possess our wealth of forest and field and mine, our people also have their aspirations, and if destiny should dissever our connection with the great Mother Country, they propose to conduct their own affairs still, and, under Providence, make not an integral part of the United States, but a prosperous, and progressive nation, a neighbor in harmonious relationship, but hardly a business partner with no voice in conducting the business.

THERE is every indication that the timber export trade from the lower provinces is at present in a much more settled and healthy condition than it has been for years. Unfortunately, the depression that existed in every branch of trade and the decrease in European demand occurred at a period when there was an overplus in stock in Quebec and a large over-production throughout Canada. But in the very nature of things this evil has worked its own remedy, for manufacturers and exporters soon saw the folly and absurdity of depleting the forests, and thus killing the goose that laid their golden eggs, at a time when such a large stock of manufactured lumber remained upon the market, while at the same time they realized that the standing timber on their lands was yearly increasing in value. For this reason, while a few firms suspended operations in the woods altogether, most of the rest curtailed their usual output. The result of this has been to place the trade in an eminently satisfactory condition. Nearly all the old stock held over has been parted with at fair prices, thanks to an increased Old Country demand. Some lots of white pine were sold at a better price than was ever before obtained. The present encouraging condition of affairs will no doubt lead to more extensive operations on the limits during the coming season, but it is to be hoped that the grand mistake of the past, overproduction, will be avoided. The Quebec *Chronicle* is of opinion that the recent indications point to a revolution in the Quebec timber trade. The old system of manufacturing the timber in the woods is to a greater or lesser extent giving away to the production of logs, destined to be converted for exportation into boards and deals. The reason is that in face of the increased values of timber and of the rapid denuding of forests, the waste resulting from the manufacture of timber is quite an item in the calculation of limit holders. The butt end logs of many of the largest trees hitherto felled in the woods have been left to rot where they were hewn, because of some decay or hollow in the heart, which unfitted them for export as timber, though the sacrifice involved the loss of any amount of excellent "sidings." Then, too, there is to be taken into account the wasted material resulting from the squaring of the logs. The only check to a complete transformation in this industry is the fact that English dealers prefer to import timber to manufactured lumber, as they find that customers like to cut it to suit themselves. But there is no reason why, if specifications are furnished from England, Canadian millers should not saw the logs to meet English requirements; but the interests of English mills and the conservative tendencies of old country dealers stand in the way of a very general change in this direction. However, a good portion of the Canadian export timber trade with England is undoubtedly giving way to the shipment of lumber to the United States, which will naturally continue to increase, more especially if the duties are removed or decreased. In the present disturbed state of the American political atmosphere, it is hard to prophesy what measures they may take regarding the duties on lumber, or how the Senate may act in the matter of a Retaliation Bill.

CASUALTIES.

Mr. Jos. Dovey, of Lindsay, had four fingers of his right hand cut off while jointing.

At Eddy's mill, Hull, a boy named Delany, while working at one of the saws had his haud badly cut.

A boy named German Asselin has been killed at Brompton Falls, Que., in a saw mill by the saw striking him in the abdomen.

A man named Lepense, aged 25 employed at Hurdman's mill, Hull, had his leg badly jammed, by getting caught among some chains.

Robert Newbury, of Belleville, who was employed in the saw mill at Deseronto, had three fingers of his right hand cut off by a buzz saw.

Lysander Johnson a Swede working in one of the camps of the West Michigan Lumber Co., near Big Rapids, Mich., had his head crushed, and died instantly.

Mr. Rogers an old man employed in the lumber mill of the Rathbun Co., at Deseronto, was severely injured by a speedy pulley striking him on the back of the head, cutting an ugly gash.

Mr. L. Gilbert, employed in J. & J. Kerr's planing mill Petrolia was badly injured by a board thrown from the saw. It is impossible to say at present whether he will recover.

A young man named Edward Begin, married, and father of a family, at Paradis' Mills, Levis, P. Q., had his thumb so severely injured by a circular saw that it is feared it may have to be amputated.

John Reynolds, a Canadian 53 years old, was run over and killed by a train on Load's logging railroad, near Mud Lake, Mich. Both his arms and legs were ground to a pulp, and he was literally scalped.

William Beadle, of the Railway Boarding House, Waubaushene, while attending his work at the burner of the Victoria Harbor lumber mill fell a distance of thirty feet and was so much injured that he died shortly after.

Alexander Miller, aged twenty-six, of Remus, was killed in the mill of the Chippewa Lumber Company, at Chippewa Lake, Mich. A slab from the edging machine struck him in the side with great force, almost disembowelling him. He died soon afterward.

John Proctor, a young man of 20, employed as apprentice in T. A. Hodgson's planining mill, Ottawa, had a piece of the thumb of his right hand cut off and three fingers cut while working at one of the machines. He was cutting a piece of board, when it flew back and drew in his hand.

Mr. T. H. Carr, lumber buyer for McCraney, McCool & Wilson, of Toronto, while assisting to load flat cars at Flesherton station was suddenly seized with an attack of heart syncope and fell from the car to the ground so violently as to sustain a fracture of the skull. Death was instantaneous.

A man named Thos. Bailey was instantly killed on August 4th in Lambert Love's saw mills at Port Sandfield. Bailey was tail-sawing and was caught on the carriage and dragged on to the saw. He was terribly cut to pieces. Bailey had lived in Port Carling for a number of years, and leaves a wife and family to mourn his loss.

While working in the Cameron Lake Mill, a gentleman by the name of William Lace got his left hand caught in the lath saw while trying to catch a pile of lath that were about to fall, two fingers were almost cut off and cutting his hand badly in other places. The unfortunate man had just recovered from a severe accident of the same kind which happened some time ago.

While Mr. M. M. Vickery, of Port Perry, was working on the slabber in Green & Ellis' Mill, at Fenelon Falls, a slab got stuck in the gate and in trying to extricate it he was drawn towards the gate which struck him, inflicting several deep wounds above his right eye, which rendered him completely insensible and he remained in this state for some time afterwards.

In the early part of August a Frenchman named P. Lugan, who was working in Mather's saw mill at Keewatin as sawyer, was struck by a slab in such a manner as to throw him upon the saw, and before any assistance could be rendered him the saw had passed completely through his body, entering on the right shoulder, and in severing his body threw one-half some ten feet from the saw.

A very sad accident occurred on Aug. 4, eight miles from Port Carling, Ont., in Mr. Love's sawmill by which Mr. Thos. Bailey lost his life. He was tail-sawing and while stooping to pick up board he was touched by the carriage on the hip. This caused him to loose his balance and fall across the saw, which entered his lelt shoulder completely severing his head and right arm from the body. The unfortunate man leaves a wife and three small children.

An employe of the Holt Lumber Co., Oconto, Mich., named Godfrey Durand, was killed by a peculiar accident. He was adjusting some part of the gang, and had his head between the spokes of the fly wheel, when the machine was started by the sawyer. Durand was caught in the wheel, and whirled around a couple of times, his head being crushed and his limbs broken. He died within a few minutes after being removed.

A horrible and fatal accident occurred in Vigars Bros. saw mill at Port Arthur, in which a sawyer named Toby Smith was almost instantly killed. It appears that a piece of slab became wedged against a large circular saw. Smith ran the log carriage back and stopped the machinery to remove the slab. He omitted, however, inserting a safety pin in the lever which controlled the steam feeder and while busy removing the slab the feeder suddenly began working and the log carriage forced him forward against the saw. It was not running but he was ground against its sharp teeth and torn and mangled horribly. The main artery of the right thigh was cut. From this he bled profusely, and death followed in a few seconds. The unfortunate man was between 50 and 60 years of age. He had only been here about three weeks, coming from Orillia, Ont., where he is said to have a wife and family.

A very serious accident occurred on the logging road of the Gratwick, Smith & Fryer Lumber Co., near Gaylord, Mich. A train of cars left the woods at 12 o'clock carrying 140 men from work to camp for dinner. For this one hour's time was allowed, and the distance being several miles, the engineer made all possible haste to get the men to headquarters. While going down grade with the throttle wide open a heavy piece of wood fell from the the tender in front of the cars, derailing five, which with their load of human freight were overturned and piled up promiscuously. A large number of men were buried in the wreck and not extricated for nearly three hours. Two of them had their backs broken and could not be moved, another was sent to the hospital at Cheboygan, but died before reaching Indian River, and many suffered from broken arms Three were killed and four others fatally injured.

FIRE RECORD.

Bush fires continue to do great damage throughout Parry Sound District.

The bush fires destroyed 240 cords of wood belonging to Mr. Mundy, of Penetang.

A serious bush fire raged at Cote St. Louis, near Montreal and the residents of the localities were in constant fear of seeing their homes and barns destroyed.

R. J. Francis' planing mill and the property adjoining, in New York city, was struck by lightning during the storm on the night of Aug. 3, and burned. The loss altogether was $175,000.

The extensive sawmills of La Frenciere, situated at Louisvllle, Que., were recently destroyed by fire. A number of logs were also burned. The loss is estimated at $100,000, partly covered by insurance.

The steam power saw mill at Eel River, Restigouche county, N. B., owned by McNair and Bros., and operated by Messrs. Hayes & Co., was destroyed by fire Aug. 11. The building was insured for $5,000.

The Muskegon Shingle & Lumber Co. lost about 2,000,000 feet of logs by a forest fire about nine miles from Big Rapids, Mich. C. J. Hamilton also lost 1,000,000 feet, and Big Rapids parties a small quantity.

Two store-houses belonging to the Georgian Bay Lumber Company, at Waubaushene, were recently destroyed by fire, as well as a boat house belonging to the same firm. Several of the employees were badly injured while fighting the flames.

During the past month quite a number of bush fires have been raging in the vicinity of Pembroke. Though comparatively small compared to the large fires in the limits, yet they were large enough to cause uneasiness to several of the farmers.

The large saw mill of the Little & Croft Lumber Co., at Evansville, Ind., one of the largest hardwood mills in the country, burned Aug. 1. The entire lumber district was threatened, but by great exertion the flames were prevented from spreading. The loss is placed at $100,000; insurance $60 000.

The mill and yards of the Eddy Manufacturing Co., at Birchton, three miles from Ottawa Ont., were totally destroyed by fire Aug. 1. William Hobbs was burned to death, and several other hands badly injured. The loss is put at $70,000 on the mill and about $250,000 on the lumber. Insurance about $100,000.

Mason's saw mill at Bedford was discovered in flames on the morning of July 29th. It spread to Moir's grist mill and elevator and the whole pile of buildings was destroyed in an incredibly short time. The loss to Moir, Son & Co. will aggregate $40,000. It was formerly well insured, but, owing to high premiums, the policy lapsed, until now there was only $2,000 in Clarkson's agency. The fire was undoubtedly incendiary.

Killam's lumber mill and the Buctouche and Moncton railway bridge at the Scotch settlement, New Brunswick, were destroyed by fire July 30th, and 50,000 feet of lumber were destroyed. The building and contents were completely destroyed. The loss on the mill is $4,000. The railway bridge burned was 200 feet long.

Charles Lee's planing mill and box factory at East Saginaw, Mich., burned Aug. 8, the fire also destroying some adjoining store sheds filled with lumber and several dwellings. Lee's loss is $75,000: no insurance. H. C. Ripley lost $12,000 and H. C. Hamilton $5,000, the latter being insured for $2,000. Other losses were on the residence property.

PERSONAL.

Mr. E. W. Rathbun and family spent a short time during August at Old Orchard Beach, Maine.

F. W. Gray, of Omaha, Neb., one of the largest lumbermen of that section, is a candidate for Congress.

Mr. Geo. E. Gladman, Sec.-treas of the Midland and North Shore Lumber Company, gave THE LUMBERMAN a call the other day.

W. J. Macauley, an old time Winnipeg lumberman, intends to build a saw mill at some point on the Pacific coast, probably at Seattle, W. T.

Mr. John Waldie, of the Victoria Harbor Lumber Co., has been nominated by the Reformers of Halton as their candidate and elected as representative of the Riding in the House of Commons

Mr. Wm. Hickey of the William Hamilton Manufacturing Co., left recently per the C.P.R. for Point Levi, Quebec, where he will erect and put in working order one of the firms' celebrated gang saw mills.

Mr. James Angus, of Pembroke, has recently been raised to the position of agent for Bronson & Weston's lumbering company on the Schyan river limit on the upper Ottawa, and left with a large gang of men for that region where lumbering is carried on on an extensive sale.

Wm. Hamilton, of the Wm. Hamilton Manufacturing Co., of Peterborough, Ont., has lately made a tour to British Columbia, with the object of introducing the saw mill machinery of the company in the province. F. S. Strickland of Westminster, has been appointed agent for the Hamilton Co.

RAILWAY MATTERS.

The purchase of the Duluth, South Shore & Atlantic railroads, will give the C.P.R. a line south of Lake Superior, to the eastern seaboard, that will be somewhat shorter and better every way than the north shore route. It will be important to the Lake Superior lumber interest in giving a direct outlet to the east for high grade stock, over a road controlled by one interest. It is probable that before long the Canadian Pacific Company will construct a line from Duluth north or northwest to connect with the main line. Without this link the through route by way of the south shore would be incomplete.

The terms of agreement between the Manitoba Government and the Northern Pacific have been made public. The chief provisions are as follows:—The Red River Valley road to be handed over to the Company with the tracklaying and the surfacing completed, but not ballasting. The Company to acquire the rolling stock now held by the government for $720,000 secured by first mortgage bonds. The Company will also receive bonuses sufficient to construct a Howe truss wooden bridge over the Assinniboine, near Winnipeg, the cost not to exceed $40,000. The Commissioner will acquire the right of way for a railway from Morris to Portage la Prairie, and also for the construction of the road, the legal title to remain with the government, which must be done before May 1889, when the right of way and the railway will be conveyed to the Company. In default of this repayment the government will assume possession. A second bridge will be constructed across the Assinniboine on this line, on the same terms as the one above mentioned. No stock to be transferred to the C.P.R., or the St.P., M. & M., or to any official of either, and no pooling contract or agreement must be entered into with either. The Company are to be exempt from taxation until the earnings are sufficient to maintain and operate the road, but this exemption is not in any case to continue longer than twenty years. Any railway company, with the exception of the St. P., M. & M., and the C.P.R., are to be allowed running powers over all these roads, and all freight rates are to be fixed by the Governor in Council.

Exporting Logs and Lumber.

The successful exporter is the exception—the man who loses is in the great majority. There is no regularity in the foreign market; the price obtained is governed not by the quality so much as by the quantity. When good prices are obtained the report encourages many new men to try a shipment, and the supply being drawn from so large a field, the late good market is at once crowded, and as usually is the case with the new shipper, he has put no price on his stock, but has merely instructed his consignee to "get the best price you can ex quay," trusting to luck that he will get the late quoted high price. If it be his first consignment his commission dealer may "save him for the next time," as it does not do to scare a new man off at the start, and the "best price" may be good enough to encourage the novice to try another and larger shipment with the same instruction as before. If the market is good, it is well, but if bad, the first profit does not nearly make good the loss. It seems that a foreign commission merchant is lacking in discretion above everything else. He will often sell stock for less money than it is worth here at home, and will step out of all responsibility by: "You told me to get the best price I could!" If he had used his discretion and held the stock, submitting the best price obtainable, and waited instruction, he would not only have protected his shipper, but would have maintained prices; for, so long as the foreign buyer can purchase his stock there as he could were he here, he is going to save all the expense of the ocean freights and the hundred and one petty charges which are tacked on in every port.

Our advice to the shipper is to go slow, know to whom you consign your stock, and, moreover, put a price limit on what you send. In many of the markets the expenses for holding stock are but little more for three months than for the first landing in store. Again, each shipper should bear in mind that what he may lose in storage he will make up in price, and a steady market thereby maintained. The successful exporter is not the one who consigns his stock to this or that market simply because he has heard that it is a good one. He first knows it is good and how long it is likely to remain so. He instructs his commission dealer to get a certain price or not sell it. He is the exporter who will not only make money for himself, but will maintain prices for his brother shippers.—*Lumber Trade Journal.*

The Redwood Forests.

"No adequate idea can be conveyed of the impression received by a 'tenderfoot' in the center of a forest where such gigantic trees stand in solid phalanx," says a tourist who recently examined some of the redwood trees of northern California. "I was impressed with a sense of fear, loneliness and littleness. Three trees, selected at random in different parts of the forest, measured respectively 80, 76 and 74 feet in circumference six feet above the roots, and the first branches appeared to be at least 150 feet above ground, to which point there is no apparent diminution of size. A comparison of those standing with others of equal size and height that had been felled prove to be more than 350 feet to the topmost leaf. To see an isolated tree of such proportion is an interesting spectacle but to be in a narrow path where they are in such close proximity to each other as to momentarily change one's course is a novel experience, yet a strangely pleasurable one."

Peculiarity of the Dismal Swamp.

There was no one at Roger's sawmill who could give us any information, so we paddled on to the village of Deep Creek, before reaching which we passed through another lock. Here the Dismal Swamp proper may be said to begin. At this lock we were again raised several feet, so that we were now, although a few miles from tidal water, probably sixteen feet above the sea level.

"Shall we pay toll here?" we asked the lockman.

"Not till you come out," he answered, making it clear that there was only one entrance and exit on this side of the Dismal Swamp.

"Does the swamp begin here?"

"Yes," says the lockman, leaning at an angle of 40 degs., and slowly pushing the great beam with his back. "It begins here, and it runs all the way to Florida."

This was true, in a way. The whole southern coast is margined by swamp lands; but the Dismal Swamp is not of them. It is high land instead of low land; its water is fresh, instead of salt or brackish. Among swamps it is an abnormality. It leans over the sea and yet contains its own moisture, like a bowl. Indeed, the Dismal Swamp is a great bowl, forty miles long and ten to twenty wide, and, strange to say, with its highest water in the center. The sides of the bowl are miles of fallen and undecaying trees, fixed in a mortar of melted leaves and mold. Deep in the soft bosom of the swamp are countless millions of feet of precious timber, that has lain there, the immense trunks crossing each other like tumbled matches, "since the beginning of the world," as a jumper cutter said.—John Boyle O'Reilly in *Boston Herald.*

TREES.

I love the trees; each hath its separate charm—
Th' enduring oak, with its out-reaching boughs'
Extended shade; the high, majestic elm;
The graceful poplar and the spreading ash;
Yet, not the least, the ever-verdant pine—
All, with their leaves of varying shades of green,
And vocal with the songs of choristers
That cheer the heart and elevate the soul.

I love to roam through Summer's shady woods,
Among the rugged columns, towering high—
Grand, unhewn, stately pillars, firm as rock—
Pillars unhewn of Naure's God-built temple,
Bearing their leafy canopy o'erhead,
And spreading their protection over all,
Fit emblem of the kindly love of Heaven.

How closely doth the history of trees
Mark out the eventful course of human life,
From the first germing of the infant sprouts,
Through all successive stages of its youth!
The youthful sapling with its gay, green crown,
Bends playfully before the evening breeze:
But later, wildly sways its leafless limbs
In writhing struggles with the northern blast;
To stand erect amid a world of storms,
Or else succumb, to be deformed and gnarled,
Until, at last, just as it is cut down,
With all its faults and blemishes, laid prone.
This is the course—this is the life of man,
And such th' eventful history of trees—
Trees which of all on earth reach nearest heaven,
True type of human privilege!

For upward from the ground, with growth on growth,
Trees emulate the sky. Upward their progress,
And upward, too, all growing nature tends—
Grass, flower and shrub, each to its height; while still
Their exaltations to the sky ascend
Like prayerful incense to the mercy seat;
So, even so, O man! thy prayers should rise—
Those real aspirations of thy being;
And thy soul upward progress to thy God.

A Monarch of the Forest.

A historic tree was felled near Taylorsville, Ohio, recently, which equaled in magnitude some of the famous trees of the Yosemite. This giant of the forest has been the attraction of that locality for many years, but it was not until a Cincinnati lumberman found the tree that an attempt was made to utilize it. The tree was 11 feet 8 inches in diameter at the base and 240 feet in height. It was hollow at the base for several feet and at least seven feet in the clear. For sixty feet there was not a limb, and it is estimated that it will yield nearly 20,000 feet of lumber. The first section of the tree was sent to Cincinnati, and placed in the Exposition hall, to be gazed at with wonder by the thousands of admiring visitors during Exposition time.

A Lumber Case.

Before a Sheriff's Jury at Dalhousie, New Brunswick, there was recently a replevin suit in which the N. B. Trading Company were plaintiffs and Henry O'Leary was defendant. The suit lasted four days and resulted in a verdict for Mr. O'Leary. The matter in dispute was half million feet of logs, principally pine. The matter is to go to the Supreme Court, unless a fair settlement is effected. Mr. O'Leary admits that a part of the logs in dispute were cut from the plaintiff's lands and has signified his willingness to have the quantity so cut determined by mutual arrangement, when he will pay for what has been illegally taken. A feature of the case was the fact that Mr. O'Leary's parties managed to have a straight-away operating road three miles long while his land only measured only one and a quarter miles along the road. The remainder of it must be on someone else's land.

Chute Landings.

The immense lumbr trade of the California coast is carried on, as far as shipping facilities are concerned, under disadvantages which few realize. There are very few good harbors anywhere on the coast line, and from those places where the lumber is shipped, there may be said to be none at all. The result is that a system has been devised for placing the lumber on the vessels, which is different from that in vogue anywhere else in the world.

Wherever there are lumber mills in small settlements, a "chute landing" is built, and at these chutes all freight by sea is handled. As there is as yet no railroad running anywhere near the coast in Sonoma, Mendocino and Humboldt counties, about all the lumber and freight traffic is done by schooners, and for them the chute landings are necessary.

As a general thing these chutes are built on the south side of the points, so as to be protected from the prevailing northwest winds of the summer months. Many of them are very expensive structures to build and maintain. At some places it is expected that the chute will be carried away by the storms of winter, so that new ones are built each season. There are other places, however, where the chutes have stood for years. At most of the landings there is only one chute, but in several instances there are two or three, where the trade warrants it. The shears or legs are firmly secured to rocks, and the apparently frail structure is secured to them, held in position and braced by strong iron cables. The old cables of the cable railways are now utilized for chute building. The lumber is slid down the chute to the vessel, and by means of a brake at the extreme end its speed is checked before it goes to the deck. In lowering freight to a steamer a sled is used, and horses draw this sled up with whatever is to come ashore from the steamer.

The outer end of the chute is so arranged that it may be raised or lowered to suit the tide or height of vessel. Many of these chutes are very long and quite expensive. Certain specified charges are made, these being fixed by law. The large mills, of course, have their own private chutes. The vessels are securely moored, so as to remain as nearly in one position as possible, but many are lost every year owing to poor harbors. Nearly all these chute landings are exposed in the winter months when the southwest or southeast gales blow. Nearly the entire lumber trade of the northwestern coast is carried on by vessels which load at these chute landings. Of course, at such places as Humboldt bay there are wharves, but the majority of the landing places, are fitted with chutes, since wharves cannot be maintained.—*Mining and Sientific Press.*

ITEMS OF INTEREST.

White pine logs were brought up from a depth of 700 feet, while drilling wells near Albany, Ga.

There is a man in Rawlins county, Kan., who is the owner of 60,000 trees all planted by himself on his homestead.

A log recently cut at a mill on Puget Sound measured 40 feet in length, scaled 100 inches, and contained 14,620 feet of lumber.

During the month of July there was received at San Francisco, 30,954,608 feet of pine, 12,504,704 feet of redwood, and 11,799,500 shingles.

There is a redwood tree on Isaac Crispin's place, near Point Arena, Cal., that measures 97 feet in circumference, and a fraction over 22 feet in diameter.

A piece of lumber 12x12, and 54 feet long is above the average, but a piece 4x12, 80 feet long, is considerably so. Both pieces were cut in Washington Territory for a school building in Chico, Cal.

A Michigan editor, who is also a member of a saw mill firm, effuses as follows:

Woodman, spare that tree,
Touch not a single bough,
In youth it sheltered me,
And it's worth nine dollars now.

It is estimated that the annual consumption of wood in the United States amounts to, in cubic measure, 2,500,000,000 feet for lumber and wood manufactures, 360,000,000 feet for feet for fencing material, 17,500,000,000 feet for fuel, making railway construction, 250,000,000 feet for charcoal, 500,000,000 a total of 21,000,000,000 cubic feet.

A delving historian, says an exchange, has dug up the fact that Colonel Bowie the inventor of the bowie knife, was a Kentucky lumberman. Once when on a sick bed his mind dwelt on the most expeditious way of disemboweling an antagonist, and he whittled out a model of the knife that he thought would best answer the purpose. This model was sent to a man who cut the blade of the first bowie knife out of a discarded saw. It illustrates of what service a lumberman on his sick bed may be to civilization when he settles down to serious meditation.

One of the queerest men in the trade at Toledo, says the *Northwestern Lumberman*, is William Peter. He belongs to Michigan about as much as Toledo, is a German by birth, and I am told once worked for $4 a month and clothed himself. I'll wager that he saved $3.50 of it, too. Forty years ago he kept a small store at Columbiaville, or Nigersville, as it was then called, a straggling hamlet on the Flint river, Mich. He started lumbering in a small way, and did business in a hand to mouth manner, but saved money, and finally got on his feet, removed to Toledo, where he owns a planing mill, sash, door and blind factory and lumber yard, a large mill and salt block at Bay City, Mich., a woollen mill and $25,000 hotel and 600-acre farm at Columbiaville, and a mill in Mecosta county, with pine timber enough to keep the wolf at arms' length for 10 years ahead. He never let a cent get away yet, and his right hand has not yet forgotten its cunning. Personally, Peter isn't very popular. I had a grudge against him once, when a ragged impecunious lad he refused to trust me for a pair of boots, but it was creditable to his business sagacity, and I long ago forgave the affront. But he "got there all the same."

THE NEWS.

ONTARIO.

—The saw mills at Edgar have shut down.

—A large saw mill is being built at Falkenberg.

—Thompson's shingle mill, at Orillia, turns out 60,000 per day.

—Thompson & Wright, lumbermen, Hamilton, have assigned.

—The Georgian Bay lumbermen are sending their men to the woods.

—No more rafts will be allowed to pass through the Grenville canal.

—Mr. John Rodd is erecting a new steam saw and shingle mill at Lindsay.

—The Emery Lumber Company's big mill at Midland cuts 100,000 feet a day.

—The Canada Lumber Company will not remove their mills from Carleton Place.

—There will be more lumber cut at Parry Sound this season than for many years past.

—The Ottawa mills are running out an unusually large amount of lumber this season.

—The *Forester* says 123 carloads of lumber and shingles were shipped from Huntsville in June.

—H. S. Mullen & Co., in the wholesale lumber trade in Toronto for the past year, have assigned.

—Lumbermen say that the Grand Trunk railway requires more sidings both at Midland and Orillia.

—The Georgian Bay Lumber Co. are shipping a large quantity of sawn square timber to Europe.

—Destructive bush fires in the Upper Ottawa region have consumed much valuable timber on the limits.

—The Rathbun Company are building a new wharf along their five lots north of Wharf street, Belleville.

—Wholesalers report trade in Western Ontario improving. In the eastern United States it is generally dull.

—E. U. Wiffen's mill, Fesserton, is running full time and he expects to turn out two million feet of lumber.

—The Waubaushene and Magnettawan lost a tow of 24,000 logs near Hope Island on the way to Collingwood.

—Brisley & Skelton, of Fesserton, report trade good. They have a fine lot of logs and expect a good turn out.

—Messrs. Davidson & Hay, of Toronto, will build a large steam saw mill on their lands at Lake Nipissing, Ont.

—A defective foundation let a pile of lumber belonging to the Rathbun Company, at Deseronto, fall into the bay.

—Waubaushene lumbermen report the sale of good pine very dull, also 16 inch shingles, 18 inch shingles sell readily.

—Work in the bush has been commenced by the lumber firms on the North Shore, says the Manitoulin *Exporter*.

—Canadian l umber exports to the United States for the first six months of the year showed a decrease of $153,000.

—Mr. Wiley, late of Midland, has leased the water power saw mill of Messrs. Irwin & Bennett, South River, Ontario.

—Messrs. Hall & Booth's Amable du Fond raft of white pine timber is the finest taken out of the Ottawa for over twenty years.

—The Emery, Victoria Harbor and Georgian Bay Lumber companies each lost a tow of logs in August, aggregating about 25,000 pieces.

—The Georgian Bay lumbermen say this has been one of the poorest towing seasons they ever experienced owing to the prevailing high winds.

—The Resolute,employed by the Emery Lumber Co.,sprang a leak and sank, but was afterwards raised, and is now in the Owen Sound dry dock.

—American lumbermen have taken up three townships in Algoma, Ont., from which they propose cutting 50,000,000 feet of logs next winter.

—Several lumbermen having finished the work of driving and delivering their logs, have already gone back to the woods to begin work for next season.

—A great many lumber firms south of Sudbury will go into camp early this year on account of portions of their limits being burned over during the drought.

—The Longford pail and tub factory at Orillia has recently commenced operations, 1500 pails and 500 tubs will be turned out per day when in full operation.

—It is said to be the intention of the Parry Sound Lumber Co. to have an iron barge built at Owen Sound after the new C. P. R. steamer has been completed.

—The John Owen with a tow of long timber from French River for Tonawanda is reported to have lost her tow in Lake Huron during a gale in the early part of August.

—Mr. Jas. Playfair, of Sturgeon Bay, is cutting some of the best pine that ever came into that place. He expects to cut from four and a half to five million feet this season.

—Destructive bush fires have raged in the timber limits in Petewawa and Chalk river districts, also in the vicinity of Brudenell and Golden Lake, and great damage is reported.

—Letters patent of incorporation have been applied for by the "Sebaskong Lumber and Mining company," with a capital of $22,000 and chief place of business at Rat Portage.

—The Jenkins Bros., have erected a new steam saw mill on Jenkin's island near Fenelon Falls. The machinery was taken from Port Perry on scows towed by the steamer Anglo Saxon.

—The Superior and Shawanaga lost a tow of 10,000 logs belonging to Victoria Harbor Lumber Co. above the Giant's Tomb on August 8th. They were gathered up again with few losses.

—The Rainy Lake Co's mill at Rat Portage continues to be hindered in its operations by high water on the lake. The fires could not be started in the furnace, as the water had entered the boiler house.

—The Manitou *Mercury* says that complaints are made at different points along the railway on account of the delays experienced in receiving shipments of lumber fromdealers in Winnipeg and elsewhere.

—The storm of August 8 was a heavy blow to some of the lumber companies on the Georgian Bay. Threee tows of logs, in all about 50,000, were tossed around the bay, the greater part of which may never be recovered.

—Wm. Ponenfant, foreman for John Mackay on the Amable du Fond, was charged before Judge Doran at Mattawa with having neglected to read the Fire Act to his men, as required by law. He was fined $10 and cost, $35.65.

—A party of American lumbermen are trying to buy a tract of pine on the Spanish River, the price being in the neighborhood of half million dollars. Several Minnesota operators are also said to be at the present time negotiating for a round block of pine on the Spanish River.

—The Ontario Government has issued orders to repair and rebuild the reformatory dock at Penetanguishene. It is supposed the long delay in proceeding with this necessary work arose on account of a question of jurisdiction between the Ontario and Dominion Governments.

—The Georgian Bay Consolidated Lumber Company have been incorporated. The partners are, Arthur M. Dodge and William E. Dodge and Cleveland H. Dodge, of New York city, Wm. H. F. Russell and James Scott, of Waubaushene, and J. W. Hartman, of Port Severn.

—During August, Mr. Frank Brabant, foreman for Messrs. Strickland, of Lakefield, brought down his third drive for the season. His drives contained, respectively, 44,000, 52,000 54,000. On Monday, August 13, Mr. Brabant ran 32,000 logs over the Point dam in twelve hours.

—Mr. W. C. Edwards, M. P., is reported as having said that he will cut about 40,000,000 feet in his mill at Rockland, this summer. He had almost decided to remove his mills from Carleton Place after the season, but operations have been so satisfactory that he will leave the mill there for the present.

—The Rainy Lake mill has received a big raft of logs and could easily be kept running its full capacity for the balance of the season, but owing to the high water, which has entered the boiler house, fires cannot be lighted. Efforts have been made to dam the boiler house, but so far have proved futile.

—Mr. Thompson, lumber merchant of Peterborough, has been engaged for some time purchasing pine trees in the townships of Manvers and Cartwright. He offered a resident of Blackstock $200 for ten, but the offer was not accepted. Mr. James Magill, of Yelverton, disposed of four at the very good figure of $60.

—Perley & Pattie's raft from the Petewawa river arrived at Ottawa recently. It is red pine and consists of 130 cribs. While the raft was in transit from Coulonge Lake, a Frenchman named Cadieux, from Sorel, was drowned, somewhere near Ryan's. It is supposed he fell down between the cribs and went under the timber.

—The large sawmill of the Dickson Company, Peterborough is in full blast, and while the logs are disappearing rapidly the piles of lumber are showing up in great shape. For the first time in years the mill started this season with a full staff of men. At present upwards of seventy find employment, and all of them are paid good wages.

—Trade statistics show that the railways have secured much of the lumber carrying trade formerly done by the canals. The quantity of sawn lumber carried from Ottawa and Hull by the Canadian Pacific and Canadian Atlantic railways for 1887 was nearly 90,000,000. For the same period the quantity carried by the Ottawa canals was, in 1886, 357,132,000 feet of sawn lumber, and last year, 335,694,000 feet.

—The lumber industry of the Ottawa district is undoubtedly by far the most extensive and renumerative in that line in Canada. The six principal firms, employ during the summer 5,620 men in their mills and about their yards, and in the winter about 3,800 in their shanties and on their limits. The Upper Ottawa Improvement Co., employ about 1,000 men during the summer months. The total number of men employed in the limits on the Ottawa River is about 15,000.

—Bush fires burned over a large area in the township of Clarendon and a settler near Card's Mills was deprived not only of his home but of all his effects. Near Levant Station, on the K. & P. Railway a great fire raged for days, cutting off communication between the front and rear by burning up the corduroy roads. The fires burned furiously north of Trout Lake. The loss would have been heavy, but for the exertions of Colonel Walsh and a force of workers acting under him. The recent drenching rains fortunately quenched the fires.

—A careful estimate places the number of hands employed during the summer by six leading lumber firms at the Chaudiere at nearly 6,000, and the same firms employ in the woods during the winter 3,800. The lumbermen say that only about 15 per cent. of the employes in the mills during the summer go to the shanties in the winter, the rest of their winter gangs are made up of outside men. Of the 3,800 men who work in the shanties during the winter about 2,000 live in Hull and about 1,000 in Ottawa, the remaining 800 are strangers.

—Not long since, at Ottawa, the tug Charlotte while towing a raft of square timber, grounded upon the big sawdust bank opposite the Parliament buildings, and with difficulty was got off. There must be at least thirty feet of sawdust, three hundred feet long and one hundred feet wide, between Pine Tree Island and the entrance to the locks upon which spring floods had no effect. A short time previously a raft was landed above Ratte's boat house, when a sawdust explosion took place at the lower end of it, which shook one of the ribs badly, and shoved the loading pieces about in all directions. A large boat tied to the raft was filled with sawdust and water.

—The Resolute with a tow of 15,000 logs for the Emery Lumber Co. Midland, sprang a leak near Hope Island during a heavy gale, and after battling with the elements for a while was obliged to cut the tow adrift and run for shelter. The water in her hold made such neadway notwithstanding the steam pumps being constantly at work that the fires were put out, when the captain beached her and she sank in 14ft. of water. The crew hung to the railing which was the only part out of water till daylight, the yawl boat having been lost, when a raft was improvised and crew reached Hope Island in safety, whence they were taken to the mainland. They had an exciting season.

—Lumbermen, in cutting logs on the Rainy Lake and tributary rivers to the Rainy river, place the logs in booms and leave them until they get the number out ready for towing to the mills. This season the water in the river has risen to an unusual height, and has raised the booms over the guards, letting all the logs in booms loose, to float promiscuously over the lake. As near as can be ascertained, the following is a correct amount of the logs which have got loose: Keewatin Lumbering and Manufacturing Company, 10,000,000; Dick & Banning, 2,000,000; H. F. Holmes, 300,000; Minnesota, and Ontario Lumber Company, 5,000,000; Rainy Lake Company, 4,500,000; Hughes & Kennedy, 100.000.

—The Chaudiere lumbermen who have limits on the Madawaska were lately informed that a quantity of timber bearing marks of Ottawa merchants had been claimed by Mr. H. Edey and his three sons who own a small saw mill on that river. The authorities were informed at the instigation of Messrs. H. F. McLaughlin & Bros., and Mr. Edey and his three sons were accordingly arrested and taken to Pembroke jail. They were arraigned before Magistrate Craig at Arnprior, and all four were committed for trial at the next assizes. Mr. Edey, the father of the family, secured bail for himself and one son, and two of the sons were obliged to go to Pembroke jail the next day to wait their trial. The Edey family are well known in Renfrew county and their arrest and imprisonment is the talk of the country. The Chaudiere lumbermen will be obliged to attend the trial to identify their private marks on the timber which has been found in the possession of the accused.

—Stewart Bros., who run a saw mill at Eastman's springs, near Ottawa left there some weeks ago and have not since returned. Several alleged creditors say the brothers left together

saying they were going on a trip. Before leaving, instructions were given to the clerk to continue selling lumber as usual. Mr. Neil Stewart, the father of the young men holds a chattel mortage of $1,200 on the mill, which was taken possession of by a North Gower money lender, who is the owner of the first mortgage. Mr. Kyle, a grocer, signed the firm's paper to the extent of $400. Before he was aware of the state of affairs. Mr. Kyle also bought some shingles which had been made as custom work for a man who had left the lumber to be made up. Another merchant bought some of these shingles. When the owner came for them he made acompromise offering to give him a pile of lumber instead. This was done, then he took out a warrant against the man for stealing his lumber. The case came up before Mr. Johnston J. P., and the man had to pay $18 for the lumber and the costs. The estate is now owned by Mr. Boyd who has bought it.

QUEBEC.

—The first sale of new wood this season at Quebec, has been reported.

—The bark Loyal, timber laden, Quebec to Liverpool, is a total wreck in the Straits of Belle Isle.

—The demand for square timber has been very brisk, and and good figures are obtained all round.

—Several timber limits on the Coulonge and Black Rivers are reported to have been destroyed by fire.

—Hale & Booth recently sold a very large raft of white pine to Dobell & Co., of Quebec, at 38 cents a foot, realizing a total of $53,000.

—Complaint is heard that the Act lately passed by the Quebec legislature abolishing forestry reserves, will injuriously affect the interests of the lumbermen of the Ottawa Valley.

—Mr. McLaren has purchased the Gilmour property in No. 5 Ward, Hull. Mr. McLaren will establish a saw mill on the place and also a cotton factory. About 250 hands will be employed when the new business is in running order.

—The Montreal market during August was the reverse of active, but this is the usual condition of matters at this season of the year and but little is expected to be done before September comes in. Trade is moderate in a jobbing way.

—Mr. R. R. Dobell, of the well known Quebec lumber firm of Dobell & Beckett, and Mr. W. M. Dobell, his son are on their way to British Columbia. They will make a personal examination of the lumbering facilities and advantages of that western land.

—A Dominion order in council has been promulgated to prevent any person cutting or carrying away from the Caughnawga or Sault St. Louis reserves, in Quebec, any maple tree or sapling unless the consent in writing of the Indian agent be first obtained.

—The Provincial Government announces a sale of timber lands in Quebec on the 17th October. The bonus and first year's ground rent must be paid in each case immediately after the sale. The area offered comprises 3,485 square miles, situated chiefly in the limits of the Ottawa, Lake St. John, Saguenay and Gaspe agencies.

—The good prices at which square timber sold this year in the Quebec market have caused quite a boom in that branch of the lumber trade and as a consequence a big lot of square timber will be made this year. Those making it, however, will keep the average not less than sixty-five feet, as it is that dimension and upward for which a demand exists.

—Before Recorder Champagne, at Hull, two young shantymen named Louiselle and Lacasse were put on trial on a charge of deserting from the employ of Gilmour and Co. According to the prosecution the men were hired for the drive, but skipped out before their contract had expired. A fine of $3, or a month in default of payment was imposed. They refused to pay saying they would go to jail, and when they got out bring the case before higher authorities.

NEW BRUNSWICK.

—The exports of lumber and timber from Richibucto, for the fiscal year ending June 30th, 1888, aggregated $118,096, or $44,684 more than all other exports combined.

—There is an immense quantity of lumber in the booms and along the shores of the St. John yet unrafted. The lumber cut of this season is far in advance of last year and many years previous. The estimated cut on the St. John this year is placed at 140,000,000 feet, which is some 40,000,000 in advance of last season. Nearly all of this large cut is now in. The work of rafting is proceeding with vigor at the booms.

—For some time past there has been a controversy between the Saint Croix cotton mill, Milltown, and the owners of the Union mill as to the passage of logs by and below the cotton mill. The log owners claim that jams are caused by the defactive passage-way in the cotton mill dam, and the mill officials maintain that the lumbermen should keep the log roll clear. Legal proceedings have been begun in the provincial court. The cotton mill having been granted temporary injunction to restrain F. H. Todd & Sons from allowing logs to remain on their lands, the decision of the court will be made later upon the motion to dissolve the injunction. The interests involved are large, and the case involves most of the law as to running logs and building dams on rivers.

NOVA SCOTIA.

—It is Mr. Leary's intention to start a third raft from Nova Scotia before the unfavorable autumn weather sets in. The prices for lumber at wholesale are already lower, and the builders believe that there is danger of the market being overstocked next year.

MANITOBA AND THE NORTHWEST.

—10,000 saw logs are still in the river above the mill at Birtle. There is a prospect that they will be cut up at Birtle.

—Mr. Christie, of Brandon, will build a new saw mill near the river close to the old Brandon planing mill. Work will be commenced on it in a week or so.

—M. Wilson, lumber dealer, Newdale, Man., reports lumber business booming. A very large amount of building is being done in the district this season.

—Lumber is scarce at Cypress River, Manitoba. Mr. Gowanlock cannot furnish the heavy demands in that line. Similar complaints are received from McGregor.

—The total cut of lumber in the Lake Winnipeg district this year is placed at 8,975,000 feet, an increase over last year product of 2,225,000 feet, and the estimated value is $116,675, being $42,425 more than last year.

—The only saw mill in operation on the Bird Tail is that of Mainwarning Wright. The Birtle *Observer* says: This mill is an excellent one, most conveniently situated, as the vast timber districts from which logs are procured begins a short distance north, while a well settled country lies to the south, east and west. The mill is kept going constantly.

—The board of trade of Portage la Prairie, has taken action on the lumber question. The board says great injury has been done that district, owing to the scarcity of lumber, which has been caused by the inability or refusal of the C. P. R. Co., to furnish manufacturers with cars as rapidly as they are required. The board has drawn the attention of C. P. R. Superintendent White to the matter.

BRITISH COLUMBIA.

—A boom of logs was towed into Vancouver harbor by the Mermaid for the Hastings Saw Mill in August.

—The steamer Mamie arrived from Duncan's Bay with 600,000 ft. of lumber for Messrs. Haslem and Lees.

—It is said that H. A. Harrison, of the Chemainus Lumber Co., whose death occurred at Vancouver recently, carried $12,000 insurance upon his life.

—The possibility of navigating the Fraser river to Westminster, B. C., having heen demonstrated, an impetus will probably be given to lumbering operations.

—The tug Alexander towed out the ship Hindostan, Capt. Welsh. She has been loading at Moodyville, and carries in all 1,217,708 feet of lumber. She is bound for Valparaiso.

—British Columbia fir, on account of its extreme length and imperviousness to decay, is found to be very valuable in bridge construction. It is stated that a truss of this wood well seasoned and painted will last 40 years.

—A gentleman named Prentiss, from Wisconsin, arrived at Westminster recently, for the purpose of finding a suitable location on which to erect a saw mill. It is understood that he will erect one provided he can obtain timber limits in the province.

—The barque Olaf Tryggason, 850 tons, registered at Helsenburg, Sweden, Capt. Meyer, cleared from Vancouver for Melbourne, Australia. She had loaded lumber at the Inlet and carries 1306 tons weight, equivalent to 1500 tons measurement.

—A. J. Bovill, of Westminster is about to erect a large saw mill below Langley on the Fraser River. The machinery has been ordered from Ontario, and expected to arrive about the middle of September, when the frame work and wharves of the mill will be ready to receive it. The mill will have a capacity of about 40,000 feet of lumber per day.

AMERICAN NOTES.

The booms on the Penobscot river, Me., use 80 tons of rope and 2,000,000 rafting pins yearly.

—The shipment of lumber from Alpena, Mich., thus far this season have amounted to 74,736,000 feet of lumber, 6,145,000 shingles and 4,060,000 lath.

—No more convict labor is to be employed in the manufacture of sash, doors and blinds at Minneapolis, say those interested, after Sept. 1. So mote it be.

—Logs to the amount of about 10,000,000 feet were driven from Eagle River, Wis., to Rhinelander in twelve and one-half hours. The distance is estimated at sixty miles.

—The Omaha City Council and leading citizens have been having quite a "confab" over the respective merits of cedar and cypress paving blocks, but have decided in favor of cypress.

—The largest raft on record by 2,000,000 feet was delivered at Bay City, Mich., recently by the tugs Mocking Bird and Music of Reid's line. It contained 9,000,000 feet of short logs.

—Leahy and Bebee's drive amounting to about 22,000,000 feet is now in the pond at Tomahawk, Wis. This drive came 160 miles in seventy days with an average crew of seventy-five men.

—Theodore Crown, of Viroqua, Wis., has patented a new machine to make an improved lath. The lath is manufactured from boards and grooved by the machine and used as siding.

—A Milltown, Me., mechanic has invented a log-sawing apparatus which was an upward as well as a downward motion. The scheme has not been fully tested yet, but, if successful, will be a time-saving invention to lumber dealers.

—Great damage has been done to the lumbering interests of Western Pennsylvania and West Virginia by reason of heavy rains. Quite a number of saw mills were washed away, considerable lumber lost, and thousands of logs sent floating seaward.

—The Penobscot Boom Co., of Bangor, Me., has already rafted some 70,000,000 feet of logs this season and is now rafting at the rate of from 1,500,000 to 2,000,000 daily. Eighty tons of cordage and 2,000,000 rafting pins are used annually.

—W. W. Bartley, a yard dealer in Newark, stopped payment last week, with liabilities of $19,000, and assets of about $9,000. The failure was anticipated by the Newark dealers, as Mr. Bartlett has neglected his business in favor of personal indulgences.

—During July there were 36 cargoes of lumber shipped from Puget Sound mill ports, aggregating 26,389,739 feet. Of this 12,929,739 feet were shipped to foreign ports, and 13,460,000, feet to coastwise ports. The total value of lumber exports from Puget Sound during the month was $300,867.55.

—Another strike is in progress at Tonawanda which bids fair to outdo the one that failed a few months ago. About 1,000 men went out by order oft he 'Longshoremen's Union. During the last month many of the outside men have been taken into the union, and the organization has been strengthened otherwise. The outlook seems favorable for the men.

—A portion of a petrified tree was discovered in a solid sandstone rock quarry at Zanesville, Ohio, the other day. The tree is about the thickness of a telegraph pole and has well-defined bark and roots. It was found while blasting or immediately after a blast, fully sixty feet below the top of the hill, and was in solid rock. Over it is the earth formation, then a species of shale, then limestone strata, followed by a conglomeration of stone, then some forty feet of solid sandstone, near the bottom of which is the petrified tree.

—"There has been a marked change in the method of moving shingles to market out of the Saginaw valley," said a steamer captain who plies in those waters. Formerly a dozen propellers plied between Saginaw and lower lake ports, carrying shingles, but now the dealers in Ohio go right up to the river and visit the mills along the railroads, and buy in car lots, having them shipped to their yards directly by rail. It has paralyzed the shingle business by water, but is a good thing for the dealers, who now buy from first hands, instead of, as formerly, making their purchases of Toledo, Sandusky, Cleveland and Buffalo middlemen.

EUROPEAN NOTES.

—The total amount of timber hewn and sawn imported into Great Britain and Ireland for the first half of 1887 was 1,754,693 loads.

—I. Laurie, of Sydney, Australia, is now in Europe as the representative of the saw mill owners of New South Wales, who are desirous of introducing in that market the various Australian woods such as Iron Bark, Blue Gum, etc. Samples of these woods are now being landed there.

—Glasgow trade reports state that there has been no public sale of Quebec timber held there during the past week. The result of recent auctions was somewhat disappointing: but a fair business is being done privately with the new imports of timber from Quebec, and, judging from the amount of shipbuilding work on hand, a substantial demand from this source is still looked for

—A Danish clergyman, Mr. Hansen has made some experiments relative to the growth of trees. Regarding the latter, Mr. Hansen has made daily measurements of the number of

trees in the garden of the institution, and has convinced himself that a period in growth in length, as represented by the branches, twigs and tops, alternates with another of increase in bulk—that is, in the circumference of the trunk—followed by a third period of equipoise or rest. In April and May the entire force of the tree was expended in lengthening the branches, while the thickness of the trunk remained stationary; all through May the most exact measurement failed to discover any increase of bulk; but in June, until the middle of July, when the new twigs had been all formed, it was the trunk that absorbed the nourishment from the roots, and bulged out. Then came the period of rest and inactivity.

—From the report of Farnworth & Jardine, Liverpool, we learn that the arrivals from British North America during the past month have been 63 vessels 52,847 tons, against 77 vessels 56,778 tons during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1886, 1887, and 1888 has been 152,720, 186,791, and 201,439 tons, respectively. The import during the month has been about an average for this season of the year; the demand continues fair, and the consumption may be considered satisfactory. Stocks generally are moderate, and owing to advancing freights and great scarcity of tonnage prices of most articles have an upward tendency. There has been more enquiry for both Waney, Square and Yellow pine; and prices are steady; the import has been large, but as it has chiefly arrived the stock may considered moderate. Oak in the log has arrived too freely; there is no improvement in the demand and the stock is ample; Elm is in dull demand and prices are rule low, but the stock is light. Ash is in demand but the import has been in excess of the requirements, and the stock is heavy; there is no change in value. Pine Deals have arrived too freely, stocks are accumulating, and are now too heavy; there has been a fair enquiry for 3rd quality, but 1st and 2nd qualities are very difficult of sale; for Regulars there is little change in prices to report, but Odd Sizes and Boards have declined in value. Quebec Staves have only been imported in small quantities, and are quite neglected.

Death of a Canadian Millionaire Lumberman.

In the death of Mr. Boyd Caldwell, says the Montreal *Star*, which occured at his residence in Lanark last week, Canada looses one of her millionaires, and the county of Lanark one of its most prominent and esteemed citizens. He was born in Lochwinnoch, Scotland, in 1818, and came to this country a few years later with his parents, who settled in Lanark, where his father, William Caldwell, carried on an extensive lumbering business. He was educated at Perth Grammar school and went into his father's business. To this business Boyd succeeded in 1848, and through his energy and business capacity increased it to such an extent that at the time of his death his estate amounted to considerable over a million dollars. The secret of his success was uncompromising integrity and honor and a resolute determination which never swerved from its aim, and increased with increasing obstruction. He never speculated nor undertook and enterprise without having amply provided for the consequences in the event of failure.

He became very widely known in consequence of the cause celebre "McLaren vs. Caldwell" which through the enactment and the disallowance of the celebrated Streams Bill led to a conflict between the legislature of Ontario and the parliament of Canada, to the ultimate defeat of the latter. He retained in that case the most eminent forensic talent in Canada, including the late Messrs. Bethune and Moss, of Toronto, and Hon. R. L. Church, now one of the judges of the Court of Queen's Bench for this province. The law costs in this case amounted to over $75,000. It is characteristic of the man that, from the moment the Dominion Government became involved in that famous controversy, he would listen to no suggested compromise, though he had not until then been indisposed to a settlement. In politics he was a Liberal, but too independent to be a political partizan, sometimes opposing his party and notably voting against it on the National Policy. He leaves a widow and five children, two sons and three daughters.

Extensive Timber Limit Sale.

An extensive sale of timber limits in the province of Quebec is to be held in the sales room of the Department of Crown Lands, in the city of Quebec, on Wednesday, October 17th, when over 3,500 square miles will be offered by auction, including limits on the Upper and Lower Ottawa, in the Chaudiere, Montmagny, St. Maurice, Rimouski, Lake St. John, Grandville, Bonaventure, Saguenay and Gaspe agencies. These limits will be offered at an upset price, and will be adjudged to the party bidding the highest amount of bonus. Further particulars may be obtained by perusing our advertising columns.

RETALIATION THREATENED.

The rejection of the Fisheries treaty in the United States Senate, though the result of a political dodge, rather than true statesmanship, has resulted in a somewhat serious state of affairs. President Cleveland immediately asked the Senate and House of Representatives, as the only consistent course left, to pass an act vesting him with additional powers on the lines indicated by the act passed last year, to enable him to prohibit the carrying of all goods duty free from Canadian to American ports, and by Canadian railways. The Senate rereived the message rather ungraciously, but the House of Representatives introduced a bill to give effect to the president's request. This new phase of the international complication has excited a great deal of comment on both sides of the line, and not the least among lumbermen. A reporter of the Ottawa *Journal* the other day interviewed some of the most prominent men in the trade at the capital. Their opinions, as might be expected, were very divergent. Mr. J. R. Booth regarded it as simply an election dodge, and that the act, even if passed, will never be put in force, but that if it should be the Americans would get the worst of it. "We have the lumber," he said, "and the Americans must get it." Mr. E. B. Eddy said he was "going to see Cleveland about it." Mr. Levi Crannell, local manager of the Bronson & Weston company, who are the largest exporters to the States on the Chaudiere, said it would prove a serious matter to their business. About 125,000,000 feet is shipped every year from Ottawa through the States to Boston for export. All this would be chargeable with duty, which would mean a loss of exactly the amount of the duty imposed to the Canadian firms, as in order to compete with Michigan lumber the prices of Canadian stocks must remain as they now are. It would be difficult, if not impossible, to handle all this export business through Canadian ports. Messrs. Hurdman, Pierce & Co. and Perley & Pattee all seemed to view the matter with unconcern. Agents of the American export lumber companies say that the bill will, if passed, necessitate the removal of their shipping yards from Boston and New York to Montreal and Halifax.

STATEMENT OF MOIRA AND TRENT RIVER DRIVES.

Through the kindness of Mr. P. J. Shannon, manager at Belleville for the Rathbun Company we are enabled to furnish a statement of the logs received at Belleville this season from the drives on the Moira, and also of those of the first drive at Trenton, the second not being as yet assorted. The total amount of harbor dues collected by the city of Belleville was $2,187.70, which is about the usual amount. There are about 100,000 pieces in a drive "hung up" owing to the low water. The following is the

STATEMENT OF LOGS, &C., RECD. AT BELLEVILLE.

Owners	Logs	Ties	Cedar Posts	Jott	Floats	L Logs
The Rathbun Co.	177872	18120	49206 45291	23583	290	264

Besides the above, 103 pieces of square timber were collected at Belleville, and 440 at Trenton.

CORRESPONDENCE.

MADAWASKA. N. B., Aug. 11, 1888.

Editor Canada Lumberman.

I see in your August number Mr. James Gordon wishes to know where to secure the best grades of hard maple, in Ontario or Quebec. I may say in this county we have as fine a grade of hard maple as can be found in the Dominion, and our county joins the province of Quebec, but the New Brunswick and the W. B. railway run through it on the banks of the River St. John. Hundreds of millions of feet can be got along the line, if required. The lands are owned by the N. B. Railway Company, and drained by large streams running through the forests of hard wood, from ten to forty miles, to float lumber through as fine land and growth of hard wood as can be found in the Dominion.

Connors big drive of about fourteen millions of lumber is on the River St. John, and owing to the low water he stopped the drive, fearing to jam the falls. But more or less kept floating down, and they are now piled over the pitch, and look quite romantic.

P. O. BYRAM.

THE BIG RAFT REACHES ITS DESTINATION.

From Hell Gate, New York Harbor, to the battery, all the water front was on the watch Saturday morning, August 11, for the appearance of the great Joggins-Leary raft from Nova Scotia. With day break came scores of boats of all descriptions from the surrouuding shores, filled with people anxious to inspect the great mass of floating logs.

No such forest of lumber had ever passed through Hell Gate. If the 3,000,000 feet of spruce timber were packed in schooners for shipment it would have loaded a fleet of fifty vessels. The Boston tug Underwriter, which helped to bring the raft from Joggins, took a line off the bow and led the fleet, and the Ocean King, the Underwriter's consort, stuck her prow into the stern of the raft, and the procession began.

It was noon when Flood Rock was reached and the craft entered Hell Gate. Two more tugs were at hand and made fast to the floating forest. With this escort she moved easily past the dangerous points, holding [illegible] to the west shore. Flags were floating from all the tugs, and a Union Jack and an American flag were floating in the light breeze fore and aft from the spars of the raft itself.

The task thus safely accomplished, everybody was happy, but none more so than Mr. Robertson and Capts. Riley and Cantain, who had been in company with the raft since she started from Joggins for this port.

"Didn't I tell you so?" shouted Capt. Riley as he almost danced a jig on top of the pilot house of his ocean tug, "just as I expected. I tell you I can take the largest ship afloat now through Hell Gate without any trouble.

It was twelve o'clock as the procession passed Hell Gate, and eighteen days after the raft had been launched. The next thing in order were general congratulations, and Mr. Robertson, Capts. Riley, Cantain and Babb recived their due share of it. The raft was towed down the East River, and aided by a swift ebb tide which had just begun, the procession steamed along among the general saluting of the crafts which passed it. Along the shores and docks people could be seen who had come out to see the novel craft; there were more people out to see the new raft than there were in the Blaine procession. At 1.45 John Roach's old shipyard was passed, and the raft was then making five miles an hour speed. At the Brooklyn navy yard the tars turned out en masse. They were all anxious to see the novel ship, and the jolly jacks waved their white hats in appreciation of the great enterprise. The Brooklyn bridge was literally crowded with people, and as the raft passed beneath the great structure at 1.20 p.m. the crowd cheered so loudly that it almost seemed to drown the noise caused by the monster concert of blowing steam whistles. As the raft passed the Battery the Staten Island ferry boat Southfield started out from her dock on her way down the bay. She was like a human beehive, overloaded with passengers, and as they all rushed to the port side to get a glimpse of the new craft, it looked as though the steamer would capsize. When the tugs neared Erie Basin a number of sailing vessels were at anchor in the bay along the Brooklyn shore. The Underwriter was compelled to cast off her towlines and assist the other tugs in pushing the raft over for fear that she might drift into the ships at anchor. It was a narrow escape, but the raft just steered clear, and by three o'clock amid the blasting of all the steam whistles in the vicinity, the monster Leary raft was towed into Erie Basin, where she touched bottom. Mr. Leary, the owner of the raft, was not there to greet Mr. Robertson as he had gone to New London the night before. The breaing up of the raft commenced nextday. It is supposed that the price paid by Mr. Leary to Mr. Lukenback for towing the raft is $5,000.

Branching Out from Brantford.

H. W. Petrie, of Brantford, has built up a business in new and second-hand machinery second to none in Canada, and now he is adding to it a Toronto branch, which is located at the corner of York and Esplanade streets, near the Union Station. The Toronto concern is under the management of Mr. Alfred Rubbra.

Bought a Redwood Forest.

Messrs. John M. Dollar and Wm. Fraser have returned from a trip to the Pacific coast. In California, not far from Sanf Francisco, they purchased a red-wood forest to the extent of about sixty million feet, of which they propose to take possession about the 1st of November. Mr. Dollar is well and favorably known to the lumber trade of Canada, as manager for the Ontario Lumber Co., and his ability, energy and geniality have rendered him a peculiarly acceptable man in that position. Mr. Fraser has held the position of local manager for the same company at French River. THE LUMBERMAN extends its best wishes to both gentlemen in their new venture.

TRADE REVIEW.

Toronto, Ont.

TORONTO, August 30,—Trade in both the city and Western Canada has been comparatively dull during the holiday season, but the prospects are good for a fair fall trade. The September trade though it may be interfered with to some extent by the Exhibition, promises to be considerably better than during the past two months. The demand for upper grades of pine is confined almost entirely to the local trade. Tennessee whitewood seems to be, for the present at least, taking the place of clear pine for finishing purposes, in the United States markets.

During the past few weeks several failures of some importance have occurred in Toronto and Hamilton, two or three of the younger and weaker houses having succumbed to the pressure of hard times. Dealers will act wisely in carefully scrutinizing credits during the coming fall.

The principal grievance complained of by lumbermen is the apparent breakdown of all carrying facilities on the Northern and Midland divisions of the Grand Trunk railway. Not only does the supply of cars continue to be entirely inadequate to meet the wants of the trade, but cars even when shipped linger for days on the road, and even after reaching Toronto are usually detained many days, and sometimes even weeks, before the consignee can have the opportunity of unloading his stuff. This state of affairs has done an immense amount of damage to the trade, as the dealers are at the mercy of the dilatory railroads, and find it impossible to fill their orders, many of which during the present season have been cancelled, thus entailing a serious loss and striking a disastrous blow at the lumber industry.

Another very serious grievance is in the freight bills. It is customary with the Grand Trunk Railway to charge for 30,000 lbs for each car by the rule of guess, though very rarely does the load come within several thousand pounds of weighing that amount, but the "guess" of the freight agent is sure to be on the right side for the company. A dealer lately received two car loads one of which was billed 7,000 lbs more than the other, though there was only a difference of 500 feet in the measurement. It is customary for the weight to be taken only at one point, and even when a re-weighing has been demanded it is customary to certify to the first weight even when found incorrect. Dealers claim that there should be scales at all shipping points, and the lumber weighed there, for it often happens that carloads are detained long enough to absorb several thousand pounds of moisture, &c, for which, of course the dealer must pay freight. Not only ought the lumber be weighed at the point of shipment but the cars should be weighed also, for the tare marked is often astray, as dealers sometimes find several inches of solid manure on the bottom after the lumber is removed, and of course they pay freight on this also. Quite recently, one consignee could not understand why a certain carload weighed so high until after a minute examination, chunks of hardened lime weighing several thousand pounds were found adhering to the bottom of the car.

The railways need more cars, a greater number of locomotives, and some powerful incentive to more speedy delivery.

Goderich, Ont.

GODERICH, Aug. 28th, 1888.

There is quite a lull in this market. It seems to be general, at least over this section of the Province, and judging by the greater than customary desire shown by American mill owners in Ontario to dispose of more of their stock than usual in Canada, the market over the border is not any too brisk. There is a tendency to lower prices on most grades, but it is not yet sufficiently developed to warrant a change in price lists. Lumber drummers are now almost as numerous, and are rapidly developing, so the dealers think, into as a great nuisance as Book, Sewing Machine, and Insurance Agents.

Montreal, Que.

MONTREAL, Aug. 29th, 1888.

Lumber business has been fairly good this season as building trade has been brisk, but in consequence of the high wages of building mechanics, and enhanced prices of material, the cost of building is too high to return a fair revenue and is being now curtailed, Lumber is very plentiful now, but prices are firm. Lumber in lots is sold here at a very small advance on the cost, especially before it is removed from the wharves, or cars. Seasoned hardwood is scarce and prices firm. The prices in the list are not the cost or actual retail prices, but about the figures that rounds lots are disposed of to consumers.

Saginaw, Mich.

SAGINAW, Aug. 28th, 1888.

The Saginaw market has been fairly active during the latter part of August, the transactions being considerably in excess of the same period last year. It is known that several million feet have changed hands. There is a good demand for the coarse grades. An active movement in lake shipping will be commenced immediately. Wholesale prices are :

Philadelphia, Pa.

PHILADELPHIA, Aug. 29th 1888.

The fall demand for lumber has set in strong, especially with regard to white and yellow pine. One reason for this is that dealers fear that the election will go for a protective tariff, and in that event prices will advance. The white pine trade has been active during the past few months. A little eastern spruce is handled, but it is being crowded out by other woods. The business outlook from this place is bright.

New York City.

NEW YORK, Aug. 28th, 1888.

The early part of August was marked by dulness, business was drummed to death. Just think of $40 a thousand for rift-gain flooring delivered at Montreal. That was the bid of a local handler, on an alleged order of 100,00 feet made last week. Such stock is worth $55 a thousand, if it is worth a cent. Not many years ago it sold at that price, and everybody paid it willingly. The general buisness situation is practically unchanged. The tendency generally seems to be toward improvement, and there is strengthening of confidence all around. Real estate is dull, but the projections for new buildings and plans for alterations during the week exceed those of the same week of 1887. With the home industries that consume lumber and timber in a prosperous condition, and the export movement continuing, the outlook for the future is more promising than man expected it would be.

Boston, Mass.

BOSTON, Aug. 30th, 1888.

The spruce manufacturers by underselling their agents have managed to lower the market. The handlers of yellow pine, likewise sell the rift sawed grades at $10 less that the real value. Timber sells at better prices than in other eastern markets. Pennsylvania hemlock is causing a commotion among wholesalers since the mill men of the Keystone State got freight rates down. Prices rule wholesale as follows :

Western Pine—by car load.

Buffalo and Tonawanda, N. Y.

BUFFALO, Aug. 27th, 1888.

Less lumber is being handled this year than last, which is accounted for by the fact of uneasiness regarding the tariff question, and the excitement of the presidential election. The effect it has on Canadian lumbermen is shown by a sudden activity among them. They come to Tonawanda with figures and maps in their possession, and they want to sell pine lands. And it is a fact that they are listened to with attention by some of the most prominent dealers who are noted for keeping an eye open for the main chance, and though nothing may be done now, there are those who stand ready to spring at a moment's notice. Prices remain stationary.

Oswego, N. Y.

OSWEGO, Aug. 30th, 1888.

Trade had been very dull since our last. For the past ten days, however, there has been quite an improvement, and dealers are now receiving orders quite freely, and the prospect for an improvement is good. Prices, however, are a little off and purchasers are asking and getting concessions.

WOODS FOR FURNITURE.

There are many crazes in the furniture business in respect to the different woods and their imitations, which are extensively used. For many years walnut was a wood that held absolute predominance over all other woods for furniture. But while other woods have become very popular, and walnut is apparently on the decline,- yet, really, walnut will be always a fashionable wood. The price will gradually increase, for the large demand is fast consuming the supply. In many states fifteen years ago the farms were emclosed with walnut rails, as the wood was not so valuable in those days. But in these where walnut grows, the lumber that would formerly have been cast aside with the "culls" is to-day sold for high prices. Even the small limbs of walnut trees are now sawed up into materials for rungs and posts of parlor chairs. The old snarled limbs and knots of walnut trees are sought after with avidity by buyers through the country districts, who sell them to firms that manufacture them into ornaments for antique shelves, fancy hassocks and other similar furniture. Rail fences in these districts are now a rarity in the extreme.

But as to the various woods that are used in the manufacture of furniture, maple, ash, poplar, gum and cherry comprise the list. What is known as quarter oak is the latest craze. Quarter oak is first made by sawing a log from end to end through the middle. Then each half is sawed from end to end through the middle, thus leaving four quarters. Each quarter has only three sides, one the bulge part of the log, and the other two being flat and coming to a sharp edge. The boards are sawed off the sharp edge, and each sawing, therefore, throws off a board wider than the one before it. Sawing the quarters of the log in this manner the lumber is beautifully cross-grained. The cross-grained lumber is "worked" into the finest parlor furniture at present. The wood is susceptible of of a very fine polish, and the cross grain produces an effect made by both nature and the saw, that is far superior to the art of the most experienced grainer.

But one of the prominent features still in the furniture business is the staining of wood. There are tricks in all trades, and this is the greatest one in the furniture manufactories. A very simple preparation, composed of crude oiland lampblack, is rubbed on the highly polished surface of oak, and when it soaks into the pores of the wood the wood then takes on a dark hue. The varnish is then applied, which gives a neat finish to the wood, and this is then a fair imitation of antique oak. The common gum is often stained to represent cherry. Cherry itself is very valuable, and is left in its own natural color, although it is sometimes stained to represent rosewood. Soft maple, poplar and gum are stained with preparations of burnt umber, crude oil and lamplack, to produce an imitation of mahogany. Ash has a very pretty grain that stands out prominently under color, and it can be stained to imitate red cherry. Sycamore is a wood largely used for bed posts, and it stains nicely in imitation of walnut.—W. L. Mitchell in *Globe-Democrat.*

EXCHANGE ECHOES.

Mississippi Valley Lumberman.

The Canadians are unmistakaby in favor of free lumber, whatever may be the diverse opinion of their American competitors.

Chicago Timberman.

It may be said that it is a mistake to suppose that by taking the duty off Canadian lumber, the United States government is only contributing to the wealth of the foreign holders of timber. In the first place, much of the Canadian timber is owned in this country ; secondly, while the new market opened to Canada may result to its behoof in giving it more independence as to where it shall sell lumber, the rule will work both ways.

Canadian Trade Review.

The manufacture of pianos has been a declining trade in Great Britain for years past, owing to the number of cheap instruments imported from foreign countries, duty free. The quantity of Ash, Spruce, Whitewood, Rosewood, Mahogany, Cedar, Bird's-eye Maple, Walnut, etc., used in this particular industry is becoming less, but their use is extended to many new purposes. Every piano calls for 500 feet of unprepared lumber, besides which, almost every instrument must be furnished with a packing case. These figures include the waste.

The Lumber World.

Reports from important lumber-trade centres do not indicate hilarously profitable trade at this season of the year. Prices, which have for some months been strong and steady, with an upward tendency, now show signs of dropping. Most of the reports tacitly admit that the present is a dull season, and most of them show that better things are hoped for the autumn. It is to be hoped that all the bright anticipation will be realized. It is unpleasant to see market quotations drop and to hear that general trade is dull. The one encouraging feature of the situation is the absence of complaint about collections. These are generally reported good. This is a heathful sign, showing that the lumber and and work-working business is sound and that the trouble at p resent is in outside influences, such as the free-trade agitation operating to the damage of all business.

The St. Catharines Saw Works.

We would particularly call the attention of our readers to the advertisement on page 12 of R. H. Smith & Co., limited. This factory, the oldest of its kind in Ontario, has for over one-third of a century held its own in spite of active and honorable competition, and is now producing a Cross-cut Saw which they style the "Leader," and which they claim excels any saw of that description yet manufactured in style, durability, finish and rapidity of cutting, andthey put it on the market as the "King of Cross-cuts." This institution has lately made a change in its man agement, and is now organized as a joint stock company, of which R. H. Smith, Esq., is president. Mr. John A. Cox, an old hardware man of St. Catherines, vice-president, Mr. W. A. Rawlings—who has been connected with Mr. Smith for over thirty years—secretary, and Mr. Geo. Cox, of St. Catharines, treasurer. The new company starts out under the best of auspices, having at its service the brains and experience of the old firm and a paid-up capital of $75,000. Their determination is to leave nothing undone to retain their already well-established reputation, and to cater to the needs of the trade generally in a manner that will, no doubt, be satisfactory. Their business extends from the Atlantic to the Pacific, and their export trade is already a large one.

The above company manufacture Saws of every description, all of which are tempered under the "Simonds" process which insures a perfect uniformity throughout the plate. Their Circular Saws are universally acknowledged to be *unequalled*, while in Hand Saws they make the largest assortment of any firm in the Dominion, and keep ahead of the times by constantly adding new and improved machinery, being determined to keep pace with any other manufacturer

"THE LEADER"

CROSS-CUT SAW.

Manufactured only by

R. H. SMITH Co. LTD.,

ST. CATHARINES, ONTARIO.

A Gauge is furnished with each Saw to regulate the Clearing Teeth.

Full directions for Setting and Filing are etched on every Saw.

The above Saws are made from the best Double Refined Silver Steel, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the front of the teeth to the back.

They are tempered by the Simonds Patent Process, insuring a perfect uniform temper throughout the plate, and stand without a rival as the best, fastest and easiest-cutting Saw known. *For Sale by the Trade generally.*

ST. LAWRENCE CANALS.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for the St. Lawrence Canals," will be received at this office until the arrival of the eastern and western mails on Tuesday, the 25th day of September next, for the construction of two locks and the deepening and enlargement of the upper entrance of the Galops Canal. And for the deepening and enlargement of the summit level of the Cornwall Canal. The construction of a new lock at each of the three interior lock stations on the Cornwall Canal between the Town of Cornwall and Maple Grove; the deepening and widening the channel way of the canal; construction of bridges, &c.

A map of each of the localities together with plans and specifications of the respective works can be seen on and after Tuesday, the 11th day of September next, at this office for all the works, and for the respective works at the following mentioned places :—

For the works at Galops, at the Lock-keeper's House, Galops. For deepening the summit level of the Cornwall Canal, at Dickenson's Landing : and for the new locks, &c., at Lock-stations Nos. 18, 19 and 20, at the Towu of Cornwall. Printed forms of tender can be obtained for the respective works at the places mentioned.

In the case of firms, there must be attached the actual signatures of the full name, the nature of the occupation and residence of each member of the same, and further, a bank deposit receipt for the sum of $6,000 must accompany the tender for the Galops Canal works, and a bank deposit receipt for the sum of $2,000 for each section of the works on the summit level of the Cornwall Canal : and for each of the lock sections of the Cornwall Canal a bank deposit receipt for the sum of $4,000.

The respective deposit receipts—cheques will not be accepted—must be endorsed over to the Minister of Railways and Canals, and will be forfeited if the party tendering declines entering into contract for the works at the rates and on the terms stated in the offer submitted. The deposit receipts thus sent in will be returned to the respective parties whose tenders are not accepted.

This Department does not however, bind itself to accept the lowest, or any tender.

By Order.

A. P. BRADLEY,
Secretary.

Department of Railways and Canals,
Ottawa, 8th August, 1888.

TAPER PIKE POLES

PEEVEY STOCKS AND CANT HOOK HANDLES.

CONDITIONS OF SALE.

The above timber limits at their estimated area, more or less, to be offered at an upset price to be made known on the day of sale.

The timber limits to be adjudged to the party bidding the highest amount of bonus.

The bonus and first year's ground rent per square mile, to be paid in each case immediately after the sale.

These timber locations to be subject to the provisions of all timber regulations now in force and which may be enacted hereafter.

Plans of these timber locations will be open for inspection in the Department of Crown Lands, in this city, and at the offices of the local Agents, up to the day of sale.

E. F. TACHE,
Assistant commissioner
of Crown Lands.

N.B.—According to law, no newspaper other than those named by Order in Council, are authorized to publish this notice.

WANTED AND FOR SALE.

Announcements in this department will be inserted at the uniform rate of ten cents per line, each insertion, payable in advance. For three or more consecutive insertions of the same advertisement a discount of 25 per cent. will be allowed. Eight words should be counted as one line.

TIMBER LIMITS FOR SALE.

MACHINERY FOR SALE

H. W. PETRIE'S list of Sawmills and general wood-working machinery for sale.

ONE new 2 or 3 block sawmill, with 6-inch saw.

ONE sawmill, with timber limit in Parry Sound.

ONE 2-block mill. Butterfield build.

ONE 2-block mill, small portable size.

ONE automatic sawing machine, Bavley make.

ONE 66-inch inserted and 64-inch solid saws.

TWO stave cutters with parts-61.

ONE gang lath mill, new.

ONE Waterous self-feed grist mill and bolter.

ONE Goldie & McCulloch Hall self-acting shingle machine.

ONE self-acting shingle machine, Green Bros. make.

ONE Waterous self-acting shingle mill and jointer.

ONE Eureka self-acting shingle machine and jointer, I. Frenchette, maker, St. Hyacinthe, P. Q.

TWO Doherty hand swing machines.

ONE upright swing, with 40-inch saw.

EIGHT wheel jointers, various makers.

THREE drag saw machines.

ONE heavy 24-inch planer and matcher, Rogers' make.

ONE new eclipse planer, matcher and moulder, Galt make.

ONE 24-inch planer and matcher. Picton make.

TWENTY-inch planer and matcher.

EIGHTEEN-inch planer and matcher.

LITTLE Giant pony planer and matcher.

NEW Economist 24-inch planer and matcher.

ONE 27-inch revolving bed double surfacer, Galt make.

ONE 24-inch surfacer, McKechnie & Bertram.

ONE 24-inch poney planer, Frank & Co. build.

ONE 20-inch poney planer, Frank & Co. build.

TWENTY-four-inch surfacer, Kennedy's make.

TWENTY-four-inch surfacer, hardwood bed.

TWENTY-two-inch surfacer, wood bed.

EIGHTEEN-inch surfacer, all iron and steel.

SIXTEEN-inch buzz planer, Galt make

THREE-side moulder, all brass heads, Rogers' make.

THREE-side moulder No. 2, Cant, Gourlay make.

TWO one-side moulders, McKechnie & Bertram make.

ONE one-side moulder, wood frame.

NEW 3-side moulder, Cant Bros, make, Galt.

TENONING machine, double cope, Goldie & McCulloch.

ONE J. A. Fay tenoner, small size.

TWO Ross tenoners.

ONE double cope tenoner, McKechnie & Bertram.

BLIND slat tenoner, Cowan build.

POWER mortiser, Goldie & McCulloch make.

TWO power mortisers for heavy work.

LARGE stock of foot mortisers, new at $15 each.

UPRIGHT boring machine with column.

SIX power scroll saws, various makes.

ONE 34-inch band saw, Hamilton Tool Co.

TWO new band saws, Galt make

NEW 34-inch pedestal and 24-inch bracket band saws.

ONE upright Goldie & McCullock shaper.

NEW iron Top shaper, Cowan make.

SHAPER, heavy iron column, Cant Bros. make, Galt.

ONE wood frame shaper and counter shaft.

ONE velocipede foot power shaper, Hornes.

ONE automatic handle lathe, Sheldon Bros.

ONE handle or gauge lathe, Bailey.

ONE axe handle or spoke lathe, new.

ONE Blanchard spoke lathe, Fay make.

ONE broom handle lathe, wood frame.

NEW wood splitting machine. Send for photo.

BOBBIN lathe with cutters for cotton and woollen mills.

SET of hoop machines, Goderich make.

SET match machinery for round matches.

LOT of lumber and log cars for sawmill use.

FOUR pole road cars, 7 feet, 10 inches gauge.

SANDPAPERER, new Galt make.

FOOT mitering machine, Cant Bros. make.

SIX saw benches, cut off and ripping.

TWO new wood turning lathes with rests, &c.

LOT of moulding and matcher cutter heads.

ONE iron bowl machine, American make.

ONE choir mortising and boring machine.

ONE set spoke machines, Fay make, Cincinnati.

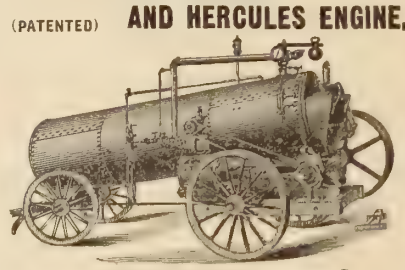
ONE knife grinder, Galt make.

ONE hand wiring machine.

ONE beading and moulding attachment for planer and matcher.

SEND for lists 13 and 14, and mention wants. Address H. W. PETRIE, Brantford, and No. 9 York street, Toronto, opposite Union Station.

THE MONARCH BOILER (PATENTED) AND HERCULES ENGINE.



Portable from 6 to 70 horse power. Surpass portable steam power heretofore produced for strength, durability, compactness, and the ease with which they can be moved.

The 70 horse power can be taken over the roughest roads, or into the forest, and set up as easily and quickly as an ordinary 20 horse power portable engine, and as firm as a brick-set stationary engine. Engines and boilers of every size and description. Rotary Saw Mills, Shingle and Lath machines, Law Grinders, Planers, etc. Mill machinery and supplies of every description. Every boiler insured against explosion by the Boiler Insurance & Inspection Co. of Canada. Write for circulars.

A. ROBB & SONS, Amherst, N.S. | Amherst Foundry and Machine works.

ESTABLISHED OVER 40 YEARS.

SAULT STE. MARIE CANAL.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned, and endorsed "Tenders for the Sault Ste. Marie Canal," will be received at this office until the arrival of the eastern and western mails on TUESDAY, the 23rd day of October, next, for the formation and construction of a canal on the Canadian side of the river, through the Island of St. Mary.

The works will be let in two sections, one of which will embrace the formation of the canal through the island; the construction of locks, &c. The other, the deepening and widening of the channel-way; construction of piers, &c.

A map of the locality, together with plans and specifications of the works, can be seen at this office on and after TUESDAY, the 9th day of October, next where printed forms of tender can also be obtained. A like class of information relative to the works, can be seen at the office of the Local Officer in the Town of Sault Ste. Marie, Ont.

Intending contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms and be accompanied by a letter stating that the person or persons tendering have carefully examined the locality and the nature of the material found in the trial pits.

In case of firms, there must be attached the actual signature of the full name, the nature of the occupation and residence of each member of the same; and further, a bank deposit receipt for the sum of $20,000 must accompany the tender for the canal and locks; and a bank deposit receipt for the sum of $7,500 must accompany the tender for the deepening and widening of the channel-way at the ends piers, &c.

The respective deposit receipts—cheques will not be accepted—must be endorsed over to the Minister of Railways and Canals, and will be forfeited if the party tendering declines entering into contract for the works, at the rates and on the terms stated in the offer submitted.

The deposit receipt thus sent in will be returned to the respective parties whose tenders are not accepted.

This Department does not, however, bind itself to accept the lowest or any tenders.

By order,
A. P. BRADLEY,
Secretary.

Department of Railways and Canals,
Ottawa, 8th August, 1888.

NEW WATER JACKETED CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

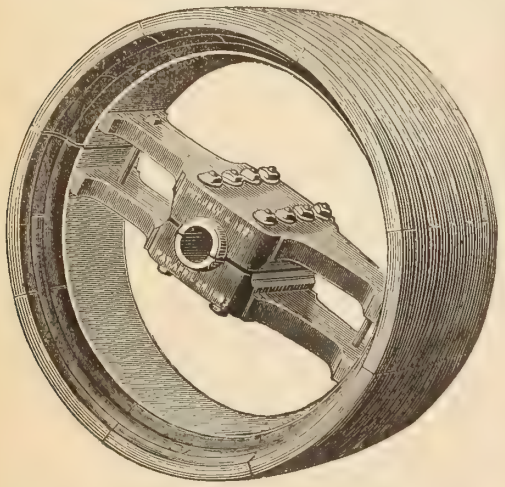
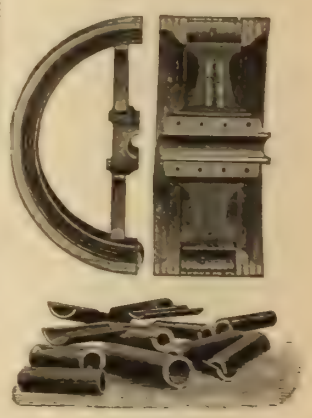
DODGE PATENT WOOD SEPARABLE OR SPLIT PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42
.30	2.43	1.69
.40	3.26	2.02
.50	4.38	2.41
.60	5.88	2.87
.70	7.90	3.43

Morin.—Appleton's Encylopedia of Mechanical Arts.

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.90	1.40
.30	2.40	1.70
.40	3.30	2.00
.50	4.40	2.40
.60	5.90	2.90
.70	7.90	3.40

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

The Dodge Wood Split Pulley Co., 89 Adelaide St. W., Toronto.

THE CANADA LUMBERMAN.

VOLUME VIII. NUMBER 10. PETERBOROUGH, ONT., OCTOBER, 1888. TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CTS.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE new Joggins raft will be constructed on the same plan as the last one, but all the bottom and lower side logs will be carefully peeled of their bark, in order to render resistance to the water as small as possible. The 21,300 sticks of which the late raft was composed were sold before the breaking up was completed.

ACCORDING to the Algoma *Advocate* the coming season promises to be one of the most important in lumbering circles that has been for many years. Besides the firms that have heretofore operated there will be numerous others on a smaller scale. Altogether it may safely be stated that within the neighborhood of the village of Thessalon there will not be far short of 1,000 men employed. Wages also promise to be a little higher than previous seasons, and a lively winter may be anticipated.

THE *Northwestern Lumberman* pokes fun at Mr. William Little, of Montreal, who five years ago published an article in *Forestry*, London, in which he prophesied that if the reckless and wanton rate of cutting were kept up, the United States would be denuded of White Pine in seven years. Mr. Little, no doubt, greatly underestimated the quantity of pine lumber in existence, but his warning was not uncalled for, and though the seven years should stretch to fifty, or even a century, waste should be carefully avoided.

A NUMBER of Saginaw, Mich., lumber manufacturers have large interests in the Georgian Bay district, and from their actions it is evident that they anticipate the passage of the Mills bill, or else believe it possible to pay an export duty of $2 per thousand on their logs and still have successful financial results. The purchase of a large block of pine lumber on Fitzwilliams Island by the Saginaw Lumber & Salt Company possesses significance in this direction and emphasizes the fact that eastern Michigan lumbermen are intensely interested in the question of Canadian timber, no matter what legislation may or may not be passed.

NEARLY all of the largest of the Spruce trees that once occupied the valley of the St. John in New Brunswick, up to the mouth of the Aroostook, have either been cut down or destroyed by fire, and except a few limited areas, the large trees of that species are now confined to the upper waters of the St. John, in Quebec and Maine. The largest spruce trees on this river are to be met with on the tributaries of Lake Temiscouata, Quebec, which is skirted by the River du Loup railway, connecting the New Brunswick with the Intercolonial railway.

THE Omaha *Republican* is sadly exercised about where the railway ties are now to come from. The Southern Pacific railway company want 3,000,000 badly, but they cannot be got just now. Ties have gone up and 40 cents apiece are charged for good redwood, and the company cannot get them fast enough at that. The enormous mileage of railways requires an immense number of ties for renewals, construction of feeders, sidings, etc. A Michigan lumberman asserts that there is now more timber lying beneath the iron rails than was to be found twenty-five years ago in the construction of all the houses. No practicable substitute for wood for ties has been proposed. Iron or steel cannot be used with safety, as its lack of elasticity wears out the rolling stock in a very short time.

WRITERS in some of the United States lumber journals have been boasting of rafts of timber which largely exceed in bulk the first Joggins, or O'Leary, "timber ship," and declaring that the method used in that raft will never become general on the lakes. The difference in the circumstances has evidently not been taken into account. While such a structure as the Joggins raft would be an utter absurdity on the lakes, the western methods would be an imposibility on the Atlantic coast. A less substantial structure would not answer for the trip from the Bay of Fundy to New York, and the cost, enormous though it be, is very small in comparison with the only other methods of transportation between the same places. As a successful experiment in a new direction, the invention of Mr. Robertson is entitled to all the comment bestowed on it.

UNITED STATES Consul Hotchkiss, of Ottawa, has made a report to the State department at Washington on the lumber industry of the Ottawa Valley, in which he comes to the conclusion that admitting lumber free at the present time would not materially benefit the American consumer by cheapening prices. The timber forests of Canada are not sold outright to individual purchasers as in the States, but are leased by the Provincial Governments for a limited term, by public auction, under certain conditions and regulations. Timber licenses are granted, and a regular tariff of dues exacted. Col. Hotchkiss argues that the remission of the duty of $2 would simply enable Canadians to lay down their lumber at that amount less per M. and obtain for it precisely what the Americans would. This advantage to the Canadian manufacturer, he thinks, would be brief, as the local governments would raise the licenses sufficiently to absorb that $2 into the Provincial treasuries. Making lumber free, he says, would not greatly increase the export of logs, because they would be, to a large extent, manufactured into lumber at the place of growth.

IT would appear that the majority of American lumbermen and dealers believe, or affect to believe, that the importation of Canadian lumber duty free into the United States would not affect to any appreciable extent the price of lumber. There are some, however, who believe that if the policy of retaliation indicated in the President's message be adopted, higher prices for lumber are sure to follow. One such individual said to a representative of the *Timberman:* "If Grover Cleveland will just cut off the Canadian shipments of lumber at once, without more ado, lumber will advance $2.50 per thousand all around. The lumber imported from Canada last year—700,000,000 ft. —amounted to one-eleventh the entire product of the three lumber producing states, and if this supply was cut off, prices would advance, most naturally." That of course is the view of one interested solely in American timber and his belief is no doubt shaped by his wishes, as an advance of $2.50 all round might mean a big thing to him. At present prices are steady, with a slowly advancing tendency, a much more healthy condition, than sudden fluctuations, which, while they may bring wealth to individuals, have a tendency to demoralize the trade.

YEARS ago the pine lumber market was as uncertain as Wall Street, and operations in pine as much of a speculation as dealings in a bucket shop. For the last year or two, however, the fluctuations in prices have been barely perceptible, and handlers of pine, on this continent at least, content themselves with a narrow margin of profit, the very existence of which is dependent upon careful manipulation of their business. In 1879-80 the sudden rise of from $6 to $8 or $10 per M. for ordinary dimensions made dealers grow dizzy with excitement, and many merchants were suddenly enriched. Such an occurrence is not, however, likely to again happen. The great benefit to the lumber business of the steady [illegible] that it makes it safe. A man investing in [illegible] secure against sudden or great loss by a [illegible]. He may not be able to make an extraordinary interest on his investment, but if he be a good business man he runs little risk of ruinous failure. There is only one contingency that may lead to another period of unsettled and fluctuating prices. The effect of the rivalry of Southern pine has not as yet been fore-told, but if there should be a great rush of Northern enterprise and capital in the lumber manufacturing business in the South, it might cause an excessive output that would tend to lower the prices of Northern and Canadian pine.

THE commonly received idea that Manitoba and the Northwest territories consist of vast treeless plains is not altogether a correct one. In previous articles we have alluded to the great spruce forests surrounding Lake Winnipeg, from which this year not less than 9,000,000 feet of lumber will be taken. This area is capable of great development, and in the near future will supply a vast amount of lumber, not only to Manitoba but to the Western States. Another heavily timbered district surrounds the Lake of the Woods, where since the construction of the C. P. R. no less than six mills have been put in operation. These mills supply not only Winnipeg but the entire country as far west as Regina, and this summer the trade has been very active. About seven mills operate on Lake Winnipeg, the largest being that of the Selkirk Lumber Company. West of Regina the lumber is supplied by mills at Calgary, which is the centre of a considerable lumber industry. Calgary is the headquarters of the Bow River, Eau Claire and Calgary lumber companies, which all have mills along the Bow River. Small mills operate at various points in Manitoba to supply local wants, but the timber is inferior for building purposes, consisting mainly of poplar and scrub oak. But in the northern portion of the province, as well as in Alberta and Saskatchewan, large areas are covered with timber and saw mills have been erected at the most important points. In this connection it may be stated no timber has been imported into the "prairie province" from the States for four or five years.

STATISTICIANS say, and statisticians are sometimes right, that every five days in the year an area of land equal to the State of Rhode Island is shorn of its trees in the United States, or 50,570,000 acres a year, the timber on 500,000 of which is required for railroad ties alone. We do not know what the Canadian figures are, but as we supply one-eleventh of the American markets, besides our European exports and home consumption, the area denuded in the Dominion must be pretty extensive. Our timber resources are pretty well known, and there are not now many large tracts of timbered lands to be discovered. Attention, however, is being directed, as mentioned in our last issue, to the spruce and tamarack belt of Lake Winnipeg. In time, with the improvement of navigation on the Red river of the north, the products of these forests will be exceedingly valuable, not only for Manitoba, but for the American northwest. Tamarack is especially adapted for use as railroad ties, and Prof. Sargent says of it that it is the most elastic wood that grows, and the supply of it in these timber belts is almost limitless. The railroad mileage of the northwest is something enormous. Michigan, Minnesota, Wisconsin, and the territory of Dakota having about 20,000 miles of railroads at this time, and this mileage is increasing

rapidly. To renew the ties on these roads every seven years will require vast quantities of timber, and for this purpose the almost untouched tamarack forests of Lake Winnipeg will be invaluable. When the navigation of the Red river is perfected so that barges can come through without unloading their cargoes, the increasing demand that the coming years are sure to bring will certainly develop a great traffic southward.

PINE lands in Minnesota and Wisconsin which had been denuded of their timber, and were, consequently, considered practically valueless, are now being bought up by a syndicate which proposes to put colonies of settlers upon them. The result is that instead of desolation following in the wake of the lumberman, prosperous communities are being formed. Several of the older lumber companies have followed this system from the start, with the best results.

ACCORDING to the Annual Report of the Bureau of Iendustries for the Province of Ontario, for 1887, which has recntly-appeared, workmen in lumber mills are shown to work the longest hours, the average per week being 65.83 hours; Railway employees (road) come next with 64.25. But in wages, no less than ten classes of workmen exceed the saw mill hands. The total average yearly earnings of a mill hand, including extra work and wife's and children's earnings, is set down at $331.03, and the cost of living $337,63 so that somebody must be getting into debt. The average number of days work is 207,93, so that the presumption is that the mill hand occupies much of the balance of the working days in other occupations, the renumeration from which is not included in the statement.

PARTIES consigning lumber to New York dealers have for years complained of the treatment meted out to them. Many of the mill men declared that the "skin game" of the dealers was ruining them. Private inspectors, employed by the dealers, worked strictly in the interest of the dealers, and if the consignees grumbled at the result of the inspection they were told that they might take their lumber away, but meantime the charges against it would have accumulated to such an extent that it was better to let it remain and accept the inevitable. Continuous agitation by the lumber journals led to the formation of a trade organization and the adoption of rules for inspection. This mended matters a little, but lately the methods of this organization have reverted to the old condition of affairs.

IT is a shame, says the Parry Sound *North Star*, the way many of the most beautiful islands of the Parry Sound Archipelago are being burned over and destroyed, greatly marring the beauty of the scenery as well as rendering the islands burnt over utterly valueless. The editor of that journal, in company with others, near Moose Island, came upon a deserted Indian camp, from which the Indians had but a short time previously departed, leaving their camp fire burning. The fire had communicated with a dead tree and was rapidly spreading over the island, and would doubtless have destroyed it but for the timely arrival of the party, who promptly extinguished it. While it is true that Indians are very careless many of their white brethren are equally so. The local Government should appoint one or more fire-wardens during the dry season for the purpose of extinguishing fires and detecting and punishing parties who are the means of starting them.

IN answer to the questions of a reporter the other day, a New York ship-carpenter gave a long and interesting list of the various kinds of wood entering into the construction of a wooden vessel. According to this authority the keel is make out of white oak, although rock maple, yellow birch and southern black gum are sometimes used; the keelsons are of yellow pine, sometimes of hardwood; the ribs of the frame are oak, chestnut or tamarack; the stern and sternpost always of white oak; the apron, inside the stern, live oak; the planking, exterior of the frame, yellow pine; the ceiling, the interior of the frame, yellow pine; the transoms and knees hackmatack and white or red oak, formerly live oak; the deck frame, yellow pine; upper deck, white pine; lower deck, yellow pine; rails and all finishing timber, white oak; tree nails, with which timbers are dowled together, yellow locust invariably; house or cabin, whitepine, whitewood, or fancy hardwoods—the interiors are generally finished to order, and may vary—the deck, bowsprit and masts are always made out, of Norway pine; spars are always of spruce; steering apparatus—wheel—various hardwoods; rudder of oak; rigging parts in wood, tackle blocks, white ash or gum; mast-hoops, oak; dead-eyes, etc., lignum vitæ; belaying pins, oak or hickory, and the fids always of hickory. In most modern vessels the list, when made to include all the different varieties which may be used in the finish and decorations, would probably be much larger.

MANY towns have risen rapidly through the lumber trade centering in them, and have fallen and gone to decay with equal, if not greater, celerity, when the decline in the timber output has been felt. The ephemeral character of "sawdust cities" is not, however, an unavoidable necessity. While some places have fallen back into a state of primitive poverty through the removal of the mills and money to other places, there are still many towns which while they largely owe their prosperity to the lumber trade are not at all likely to collapse when, in the nature of things, lumber manufacturing operations in their neighborhood are curtailed. When lumbermen and others who have profited by the lumber business have invested to a considerable extent in local improvements, their interests have become so identified with those of the town that they must, as a matter of self-protection, endeavor to make the place self-supporting when the lumbering boom is a thing of the past, thus assuring a growth that is permanent and not dependent on the lumber yard or the saw mill. The recognition of the necessity of this course has caused that competition among lumber towns for the establishment in them of new and prospectively lucrative enterprises, which are not dependent on the existence of contiguous pine forests or a flourishing lumber trade. There are, of course, towns which, comparatively speaking, always will be lumber towns, but the competition we speak of, even in such places, is an indication that the beginning of the end has been foreseen, when lumbering will cease to be the only, or even the main, business to contribute to the wealth and advancement of the community.

THE English lumber markets during the latter part of the season have slowly but materially improved. The demand has kept the dealers' stocks down to small proportions, though they were constantly replenished. In the London markets dealers were evidently under the impression that prices would fall still lower, and, consequently, held off, but as the season advanced, quotations not only held their own, but rose, and higher prices were asked and given. There is now little probability of a weakening, as stocks are very low and freight rates continue very high, so much so, indeed, that several Canadian contracts had to be cancelled, particularly of spruce. The arrivals from Swedish ports, St. Petersburg and the White Sea, have been about the average, and some cargoes of pitch pine from Montreal, Metis and Pentecost have been disposed of. At Liverpool a very large quantity of Canadian spruce has been received, and the price for this valuable timber has steadily advanced. At Glasgow, Quebec shipments have been finding a more ready sale, and prices have accordingly advanced. On the whole, the prospect is very encouraging for Dominion shippers, the main drawback being the heavy freights charged. The hardwood market also furnishes an encouraging report, showing a decided tendency to improvement. Owing to the steady demand the stocks held are not heavy. The cabinet manufacturing industry, in particular, is being carried on on a large scale, and the general furniture trade has been doing fairly well. The manufacturers of coaches and carts and railway rolling stock have had large demands for their output, and, consequently, the volume of trade in this direction has been extensive. The very wet weather of the summer season operated very adversely in the matter of house-building, the demands in this direction not being at all equal to anticipations. This refers to new buildings, for in the direction of improvements, etc., there has been no falling off. The ship-building trade has been in a remarkably healthy condition, and the Clyde ship-builders have been in full swing, and with orders still coming in. This is also true of all the West Coast ship-building trade. There is more animation also in this line at Leeds, Huddersfield and Halifax. As regards prices, the upward tendency is slow, but the improvement in this direction is steady.

IN an article headed "Save our Forests," the *Nova Scotian* of Halifax, says that it is disposed to agree with the opinion advanced that the success of the Joggins raft is likely to stimulate the work of wholesale devastation in the Maritime Provinces unless some effectual means of restraint are adopted. "The prospect," it says, "is not one to be contemplated with out strong misgivings for the future of our forests. The question is what sort of restraint is to be employed. We do not believe in export duties, but we think it is possible to apply some law that will, while not interfering too much with a great and important industry, have the effect of saving our forests from absolute destruction. We save our lobster fisheries from exhaustion by legislative regulation, and why may not our forests be kept alive by the same process? It is a matter of self preservation and should be of as much, if not greater, interest to those directly engaged in the business of lumbering as to the general public." A writer in the New York *Journal of Commerce* calls attention to the manner in which the lumbermen are destroying the forests in the White Mountains. Portable saw mills are moved up and down the slopes, and the work of slaughter is carried on without the slightest regard either to economy of the rich but not inexhaustible stores, or the effects upon the climate, fertility and beauty of the country. The same agency has wrought great havoc in the forests of the New England States, and is doing a large amount of damage in New Brunswick and Nova Scotia. These portable saw mills are simply forest killers, when used recklessly. Young and half-grown trees are sawn up as well as those of full growth, involving fatal results to the future. It is a common thing for the owners of these mills to pay so much for the timber on a given area of land, and then they strip it bare of every stick, large or small, that can find a market for any purpose whatever. If no check is put upon this sort of thing, before this generation passes away there will hardly be a decent stick of timber left in Nova Scotia. In some localities in that province a few years ago, timber was plenty, and now there is scarcely enough left to build pig pens with. The local legislature passed a law a few years ago for the purpose of preserving the forests from destruction by fires, as far as it is possible to do so. There would be difference of opinion about regulating the use of portable saw mills,, or doing anything else that would interfere with those engaged in lumbering, but it does not follow that the subject should not be dealt with. It is a very important one and demands thoughtful consideration.

NOVA SCOTIA TIMBER LAND.

A Nova Scotian correspondent of the New York *Lumber Trade Journal* says that the successful arrival of the great raft of Spruce logs from Nova Scotia at the port of New York will, no doubt, give increased value to the lands situated on the shores of the Bay of Fundy, the timber from which can be delivered cheaply at the seaboard in such a position as will admit of the construction of similar rafts. From $1 to $2 per acre has been about the value of ordinary Nova Scotia timber lands which were prized merely for the wood which grew upon them.

The Spruce which grows in Nova Scotia is of a very strong and lasting character. It is Black Spruce, and for all purposes where strength and durability are concerned, is much superior to the White Spruce of the Upper St. John. Nova Scotia Hemlock, which is an abundant wood there and of which little has yet been exported, is of excellent quality. This is especially true of the long, clean and smooth White Hemlock which are found growing near the banks of the rivers there. I have such trees in that province holding their size as well as any Spruce which I have ever seen, and attaining an equal height in proportion to the diameter at the base.

That part of Nova Scotia which is productive of timber has commonly a soil of little value for farming purposes, being often but a mass of small bowlders which have from time to time, in prehistoric ages, been carried down from the granite belt which, running in a northeasterly direction, extends through the whole length of that province, forming a sort of back bone upon which the ancient gold bearing states of Nova Scotia, which form an area of 3,000 square miles, rest. The little soil which covers these states is ordinarily poor, and fire has destroyed much of the timber which grew upon this district which had been remarkable for the quantity which covered it.

Should the transportation of logs from the provinces to the United States become a permanent business, there is no reason why the excellent Hemlock of Nova Scotia should not be transported there in the same way. The same will apply to pulp wood of any kind.

Hardwood of various kinds and of excellent quality are found in great abundance in various parts of Nova Scotia contiguous to the sea, and there is also no reason why rafts of Spruce should not have a proportion of hardwood built up in them, so that the specific gravity of the latter wood should be counterbalanced by that of the much lighter Spruce.

The lumbermen who now bring rafts of Birch timber down the St. John take care to secure to the rafts a sufficient quantity of soft wood logs or timber so as to render the whole raft so buoyant that it is easily transported at the mouth of the river.

THE UNITED STATES FORESTRY REPORT.

Mr. Fernow, chief of the forestry division of the United States department of Agriculture, has issued his second annual report which not only contains a brief account of forest conditions and interests in each State, but some advice on the pursuance of practical forestry. Among other things he says that the lumbermen in the States are using up the natural wood crop at a greater rate than it replaces itself. Even the "lumberman's" papers, which had ridiculed the very idea of a possible diminution of supplies, have begun to change their tone and, with the exception of some reckless advocates of a policy of extermination, begin to realize that the interest of the great lumbering industry would be subserved by a more careful and

more rational utilization of the material at hand and by greater regard to the production of a future crop.

Referring to the mooted withdrawal of the import duty on manufactured lumber, he states that from an inspection of the import statistics it appears that the import duty laid upon manufactured lumber in 1872 had the effect at first of decreasing importations from Canada by from fifty to sixty per cent. in 1876 or 1877, when again an upward tendency of imports begun. Comparing the importations of the last three years with those of the preceding three, however, there is noticeable again a decline in all classes of forest products from the amounts to which the same had gradually increased up to 1884, when the importation of manufactured lumber reached nearly the same amount that was imported in 1872.

For the decrease in unmanufactured wood the Canadian export duty of $2 on logs may serve as explanation, but other causes must have worked to effect the reduction in manufactured lumber in the face of decided enchancement of value of the pine product. Difficulty of access and increased distance from the market is probably the explanation.

This decline in importations appears as follows :

Importation.	1882-'84.	1885-'87.	Per cent. Decline.
Manufactured lumber.....	$21,510,765	$19,184,504	10.8
Wood, unmanufactured.....	10,404,474	8,502,165	18.3
Manufactures of wood.....	5,653,040	4,801,404	15
Fire-wood, hop-poles, railroad ties (no duty).....	3,008,945	2,099,415	32.5

That the existence of the tariff would have had any other effect upon our forest resources than to hasten to their depletion could not very well be expected. It is also reasonably certain that the larger margin created by the import duty and the consequent stimulated home competition have induced a more wasteful utilization of the standing supplies, while competition of foreign raw material might have necessitated a closer working or delayed the opening of distant forest areas.

At the present stage of development, however, it seems, so far as the saving of standing supplies is concerned, there need be no fear nor hope from foreign competition, for 'the quantity of standing pine in the United States and Canada is reduced to a condition of absolute control; it is held in strong hands on both sides and will not be lightly frittered away.' The stumpage price, which has lately advanced as never before, will necessitate the upholding of present values of manufactured lumber, and an advance of prices is as certain as a decrease of supplies. He concludes that an unbiased weighing of the arguments advanced on both sides leads to the conclusion that the removal of the tariff on lumber would have no appreciable effect upon the price to the consumer, not be detrimental to the lumberman's or sawmill business, nor in the least affect the laboring man; but at the same time no appreciable benefit towards preservation of forest and forest supplies need be expected at this date from such removal. Possibly positive local advantages may be gained, if by such competition local manufactures were encouraged and the shipping of raw material made less profitable.

OUR WOODS AND FORESTS.

The report of the Ontario Commissioner of Crown Lands for the year 1887, under the heading "Woods and Forests," contains some very interesting information.

The total amount collected from this department for 1887 was $990,855.43, or, excluding the sum paid on account of the sale held in December, $590,897.07, as the revenue from timber dues, ground rents, etc. This sum was considerably less than the estimated amount, and the shortage is attributed to the quantity of logs "hung up" in the streams, owing to the lowness of the water consequent upon the exceedingly dry season. Besides, a good deal of the winter's cut was left in the woods, owing to the extraordinary depth of snow, which rendered hauling difficult and expensive. For these reasons many mills were obliged to shut down early in the season.

The lumber trade of the year was, on the whole, satisfactory; there was no period of inaction, and sales were brisk. The early part of the season proved dull for waney and white pine, and prices were unsatisfactory, but later prices stiffened and a healthier feeling prevailed.

Certain districts on the Muskoka and Petewawa waters having become dangerously exposed to fires, on account of settlements taking place upon and contiguous to them, a sale was held of the more exposed portions, aggregating 459 square miles. This sale was attended by representative lumbermen from all parts of Ontario and the United States, and the prices obtained were satisfactory, being much in advance of any previously obtained. The sum of $1,313,750.50 was realized for the 459 miles, giving an average of $2,859 per square mile.

The tariff of dues upon timber was raised from 75 cents to $1 upon sawlogs, and upon square or waney timber, from 1¼ to 2 cents per cubic foot. These changes came into effect on the 1st of May.

The employment of Fire Rangers cost $15,000, a much larger sum than either of the two previous years, which is accounted for by the drouth. As the licensees pay one-half the cost of the service, the net cost to the Department was only $7,500. From the reports received it is estimated that by 110 distinct fires 200 millions of feet, board measure, of pine were badly damaged, and the total loss was placed at $70,000. There is no doubt, says the report, that the presence of the Rangers, and the prompt and active measures taken by them, materially prevented and substantially reduced the losses.

Not only so, but the licensees were supplied with reliable information as to the quantity of timber damaged, its situation and the force necessary to handle it this season before the grubs had time to seriously damage it, by which an enormous um was saved the province and the licensees.

The principal causes of fires are stated to be carelessness of settlers clearing land, river drivers making fires for cooking, smudges, etc., careless hunters, fishermen, tourists and explorers, and, in one or two instances, sparks from locomotives. The Commissioner urges the necessity for reducing the danger from these sources to a minimum, as "the careless throwing down of a match might cause millions of dollars' worth of the timber wealth of the province to vanish in smoke," and is of opinion that timber berths should be sold by government as soon as danger is threatened by the advance of settlement, as by such a sale a bonus is at any rate obtained and a closer supervision exercised. No serious fires were reported in the unsettled regions of Algoma, Thunder Bay, or Rainy River districts.

ARTISTS IN THE LUMBER TRADE.

They have interesting methods for working the lumber business down in Surveyor General Mitchell's County and its vicinity. A Calais, Me., despatch to the *Bangor Commercial* reports on it as follows :—

Down the St. Croix river are annually floated immense quantities of logs from the logging camps along its course. The mills at which these logs are converted into lumber are located at Fredericton, Edmundston, Woodstock, Benton, Deer Lake and Magagudavic in New Brunswick, and at other points nearer the mouth of the river. The proprietors of these mills are also owners of wharves at St. Stephen, on the New Brunswick side, and in Calais on this, to which they transport the lumber as fast as manufactured. From St. Stephen this lumber is floated in rafts or scows across the river to Calais, and then stored for future sale or immediately loaded upon American schooners, owned by these lumbermen, for transportation to other American ports. On the face of this, all is legitimate.

Lumber, the product of American forests, is admitted free of duty, while upon foreign lumber, the product of foreign forests, various rates of duty are imposed. Rough logs are also duty free. Hence an American mill owner may import Canadian trees and convert them into American lumber and pay no duty. The Canadian mill owner may import American trees and export the product to America duty free. During the investigation it has been learned that the mills at Deer Lake, Benton, Magagudavic and Edmundston, N.B., are stocked entirely with Canadian logs, while those at Woodstock, and Fredericton and others near Calais, are partially stocked with American logs, many of them, only approachable from Canadian territory, and have always been regarded as located in Canada. Yet it is asserted by those well acquainted with the matter here that these mills have for years been operated as American mills and their products admitted free.

In order to evade the duty these properties have been denationalized and practically annexed to the United States. This business began some 20 years ago and was practiced as lately as two years ago.

Until the abrogation of the reciprocity treaty the mills at "Upper Mills," opposite Baring, Me., were Canadian mills, and located in Canada. Since the expiration of that treaty these mills have become American and the ground they stand upon a portion of United States territory.

To such an extent has the practice of changing nationality of real estate and entering lumber by false declaration obtained that it is believed here that the total amount of which the government has been defrauded will reach millions. For example at this port alone, in the last quarter of the fiscal year ending June 30, 1886, over 6,000,000 feet of lumber and laths were entered. Of this amount over 3,000,000 were admitted free; as original product of the State of Maine. Under this provision, the entire timber product of the Dominion could be admitted to free entry. The lumber kings of this vicinity have not been slow to take advantage of their opportunities. They are mill owners in Canada and log owners in Maine. One tree looks like an [illegible] shippers in Canada and consignees in the United States, and when, as often happens, to antagonize them is to destroy local interest, there is but slight check upon the efforts to defraud. Treasury regulations provide for a verification of the timber cut in Maine and manufactured in New Brunswick by special instruction. This has been found to be impossible, however, and now practically the only voucher for the American origination of the lumber is a statement of the survey usually by a Canadian, in the employ of the [illegible]

To this the Miramachi *Advance* adds: "The far-[illegible] operators of the St. Croix lumber regions bought up the Crown Lands on which they operate, years ago, and it is their influence, together with that of the other private owners—such as Mr. Gibson, The New Brunswick Railway [illegible] and the Nova Scotia Land company—that prev[illegible] Brunswick government from relieving the [illegible] operators in other parts of the province of [illegible] stumpage tax which is still levied upon them."

WINTER SHIPMENT OF LUMBER.

At a recent meeting of the St. John Board [illegible] the matter of railway freight on lumber was brought up, and the statement was made that if lumber was carried from th[illegible] Shore to St. John in the winter at the same low rates that coal was carried to the upper provinces that a great deal of lumber would be sent to St. John for shipment instead of being held over till the opening of navigation in the spring.

Hon. Pugsley, says the Miramachi *Advance*, said that in conversation with a large lumber merchant from the North Shore he had learned that after the ports of the North Shore are closed it is necessary for the operators to hold their lumber over until the following spring. The gentleman to whom he had spoken thought it of greatest importance to the port of St. John that the government should cheapen the freight on lumber to St. John. By this means from $50,000 to $60,000 of additional business would be done in St. John during the winter season. The arrangement would benefit both railways and the city. He moved seconded by Mr. McCready, as follows :

Resolved, That the Intercolonial railway authorities be urged to take into their favorable consideration the matter of fixing special reduced rates with a view of enabling shipments from points on the North Shore to be made through the port of St. John, and that a similar request be made to the New Brunswick Railway Company and the Northern and North-Western Railway, with a view to encouraging the bringing of lumber over those railways to this port for shipment. Carried.

When it Pays to Advertise.

In this time of dullness and depression in business it becomes every good, solid, and far-sighted business man to advertise freely and largely in the trade journals. When such time as these come buyers are anxiously and carefully scrutinizing their pages to find the best places to purchase. In flush times with money plenty, they don't care so much, but now when all the corners are cut, and every dollar expended carefully and economically, those firms who advertise get the full benefit of their advertising. Go into any city and you will find that the only firms whose order books are filled are those who advertise liberally and persistently. It is this, and not occasional and spasmodic, that pays. Fairbanks used to say that he advertised all the time, and as much when his books were full as when demand was dull; that he maintained his business at an even, steady flow by keeping his goods and name constantly before the public, never allowing them to be forgotten, and his success justified his course. An even and steady demand caused by constant and regular advertising, a demand that can be counted on, and preparation made for it, is much better and more profitable than the same amount of orders received in an irregular and uneven manner, sometimes running overhanded, and sometimes shorthanded, taking and discharging workmen according to business.—*Southern Lumberman.*

THE LONGFORD MILLS.

On Thursday, Aug. 30th, the Longford mills were inspected by the president of the Grand Trunk Railway, Sir Henry Tyler, and party. Sir Henry Tyler, Jos. Hickson, Esq., General Manager, S. Barker, Esq., and Mr. Sargent, General Traffic Supt. of the Grand Trunk walked through the mills and were astonished at the magnificent display of well manufactured lumber in the beautifully put up piles that grace the two yards —one of the finest displays they have had the pleasure of witnessing. Sir Henry and party expressed themselves highly delighted, and were very pleased to think that the very large output of this gigantic enterprise all passe over their system of railways.

ABOUT FORESTRY.

In writing on forestry, says the Cincinnati *Commercial, Gazette*, Gen. James S. Brisbin, U. S. A., not only presents the features of his theme, but describes the use of each American tree. While 8,000,000 trees are cut every year only 1,000,000 are planted. To reproduce the forests that have been cut away it would take forty generations. Of course no one desires to turn the country into a wilderness again, but there is a danger line in forest destruction that has already been passed in many localities in America as in whole regions, now the scene of desolation in Europe.

When Gen. Brisbin turned forester the subject had made no public impression. Few journals could be induced to give him a hearing. One of the first to aid him with his pen was William Cullen Bryant. The progress that has been made is not insignificant. Nebraska once called the treeless state, is covered with young forests and will soon be as well timbered as an eastern state. For several years past from 15,000,000 to 20,000,000 trees have been set annually in that state. Its arbor day is an annual holiday. The governor of Nebraska offers a large reward to the family that will set out the greatest number of forest trees. "When I was there," the general writes, "It was $500 for the first premium, $400 for the second, and so on down to $25. Even the women and children could earn premiums, medals and diplomas and great was the competition for these rewards of the state.

Patches of timber have sprung up everywhere, and where a few years ago only the naked plain could be seen now waves a goodly forest." Trees 10 and 12 years old are 30 feet high and 8 to 10 inches in diameter. Forest trees well cared for grow with great rapidity in the west. Sage brush when irrigated will produce from twenty-five to fifty bushels of wheat per acre. The general gives many instances of the remarkably rapid growth of young forests planted in Nebraska. He has no doubt that all the plains between the Missouri river and the Rocky mountains can be covered with trees if the friends of forestry presevere.

The Island of Santa Cruz, in the West Indies, which twenty-five or thirty years ago was a garden, is now almost a desert in consequence of cutting away the forests. Owing to the same cause many of our American rivers have lost half their usefulness. The Connecticut is hardly navigable, and the Kennebec and Merrimac have shrunk one fourth. The Potomac has lost nearly one-fourth of its volume and the Hudson has declined one-sixth. The recent almost instantaneous and very destructive July flood in the Monongahela river is calculated to make the people of the Ohio valley more thoughtful on the subject of disappearing forests. The loss of millions and the sweeping away of hundreds of comfortable homes and industrial improvements as the result of a single hard rain is a heavy tax to pay for neglect to prevent the waste of trees.

New York has taken hold of the forestry question with considerable earnestness. Over 200 fire wardens have been appointed throughout the state to prevent forest fires. The New York forest commission has twenty-five foresters in its employ, located in the eleven northern counties. Trespassers have been compelled to reimburse the state on account of timber taken. Timber thieving and the spoilation of forests have been stopped. The New York forest commission was appointed to preserve the forests for the following objects:

First—For the value of the timber, both present and future.

Second—For the value of forests as sanitariums—health resorts for invalids, summer breathing places for all.

Third—For the conservation of the sources of water supply. Both science and observation agree that forests are the great reservoirs that hoard the rainfall to feed brooks and rivers. The streams of Europe have shrunk as the forests have been cut away. Our own streams have been following on in the same track.

Fourth—For the increase of rainfall. Cautious scientific men are not yet ready to assert that forests increase the rainfall, but the theory has many supporters and the belief is fast growing that forests are such an important factor in supplying moisture that it is a most dangerous policy to strip the country of its trees.

Fifth—For the climatic and sanitary influence of forests. There can be little doubt that forests are great equalizers of temperature, render the surrounding country less liable to violent winds, absorb malarial and noxious vapors, and act in many ways beneficially to human health.

A remarkable illustration of the fact that the clearing of hilly countries is likely to result in the complete failing of springs is given by Mr. Ney, who states that in Provence, France, after all the olive forests, which had been frozen, were cut down, a great number of springs failed totally. In the city of Orleans, after the surrounding heights had been thus cleared, nearly all the wells dried up, and it became necessary to go to the headwaters of the Little Loire for a water supply.

The state of New York is fortunate in still owning the most of the Adirondack region, covered with the primitive forests. It has also a forest preserve of 46,000 acres in the Catskill region.

Planing Lumber "On the Log."

S. N. Berry, of Meridian, Miss., has applied for a patent on an invention which he says makes possible "the planing of plank on the log before it reaches the saw." The Meridian *News* says:

This interesting device is a marvel of simplicity, and, as is generally the case with all useful inventions, the greatest wonder about the whole thing is why somebody did not discover it long ago. The lumber planed by this machine is now being used in the construction of several buildings in this city, and has every appearance of being as smoothly planed as lumber dressed by the regular planing mills. It is believed, as before stated, that every saw mill in the country will be compelled, in order to compete successfully in the sale of lumber, to use one of these cheap and comparatively inexpensive machines, and in this way deliver their lumber in a dressed condition to their customers, instead of in the rough as heretofore. It will be remembered, in connection with this statement, that the planed lumber is worth $5 per M more than the undressed lumber. There is no question as to the usefulness and practical working of this novel device, and when the probable increase of $5 per thousand in the value of the lumber is considered, it becomes at once apparent that the saw mills will find it to their interest to adopt them. The crude and original machine as started by Capt. Berry, is working successfully at his mills, four miles west of the city, and the lumber referred to in building here shows how well it has done its work. Improvements are being made by the parties having this matter in charge, and they feel pretty sure that they have made a most valuable discovery. As soon as the models are complete and the patents secured, the Messrs. Berry propose to manufacture these machines in this city.

A Pine Tree.

A handful of moss from the woodside,
Dappled with gold and brown,
I borrowed to gladden my chamber
In the heart of the dusky town;
And there, in the flickering shadows
Traced by my window vine,
It has nursed into life and freshness
The germ of a giant pine.

I turn from the cool-blossomed lilies,
Dewy the whole day through,
From the flaunting torches of tulips,
Flame-like in form and hue—
From the gorgeous geranium's glory,
From the trellis where roses twine
To welcome the sturdy stranger,
This poor little alien pine.

Out of this feeble seedling
What wonders the years may bring;
Its stems may defy the tempests
Its limbs in the whirlwind swing,
For age which to men comes laden
With weakness and sure decline,
Will add only strength and beauty
And growth to this tiny pine.

Hark! is it an airy fancy?
The roar of its storm-wrung limbs,
Then the sigh of its tender tassels
To the twilight's zephyr hymns:
The rain on its thick, soft greenness,
When the spring skies weep and shine;
O, many and mighty the voices
Haunting this tiny pine.

I will take it again to the woodside,
That safe with its kindred there,
Its evergreen arms may broaden
Yearly more strong and fair;
And long after weeds and brambles
From o'er this head of mine,
The wild birds will build and warble
In the boughs of my grateful pine.

A Use for Tree Tops.

The tops of pine and spruce trees are now utilized in Maine in the manufacture of paper pulp, a fact which it is argued has more than a local or mere industrial significance. The fires which do such immense injury in the coniferous forests can generally be traced to the tops and branches of trees, left by lumbermen behind them in the woods. These by the middle of the following summer become thoroughly dry and afford the very best material to start a great fire with, in case a careless hunter or tramp or berry-picker drops a lighted match or a spark from his pipe into it. In Europe there is a demand always for such minor products of the forest; and the material itself pays for cost of gathering up every part of the trees which lumbermen cannot make use of, to say nothing of the increased safety this gives to the forest, and to the priceless surface coating of decaying vegetable mould which fires consume. No one in this country has wanted the tops and branches of trees, and lumbermen have preferred to take the chance of almost inevitable fire rather than pay the cost of having the woods cleaned up behind their operations. The upper part of the main trunk as well as all the branches and chips and all unsound logs, the whole amounting generally to a third of the whole bulk of the tree, has been left in the woods to burn or rot; while in the case of hemlock it is within a comparatively recent time that any use of the tree except the bark has paid. In some districts in Maine now, however, the tops and large branches are gathered, and the wood, from which the knots and sapwood is first removed, is thoroughly steamed to extract all resinous matter and then ground into dry pulp. If it is profitable in Maine to do this, it will doubtless prove profitable in other parts; and one of the principal causes of forest fires may perhaps in time be eliminated in this way.—*Ex.*

From Worn-out Saws.

A wagon, heavily laden with a nondescript assortment of old saws in every stage of decrepitude, was slowly wending its way along Greenwich avenue the other day. The curious collection caught the eye of a reporter who, hailing the driver, inquired whither he was going with his unique load. "Jump aboard and I will show you."

The reporter clambered to the lofty seat and there obtained a closer view of what appeared to be the most valueless sort of rubbish imaginable. There were hundreds of saws in the load of every kind and description, from the long and broad two-handled instrument of the lumber camp to the delicate scroll saw of the cabinetmaker, and there was not a whole one in the wagon.

Proceeding slowly to the neighboring street, the driver turned into a yard of a large factory, where the broken and rusty relics were dumped upon the ground to be sorted into separate piles according to their worth. "You will be surprised," said one of the proprietors of the establishment, "when you learn the use to which the old saws are put after they leave our hands."

Then leading the way into the exhibition room of the place, the reporter's attention was called to a show case containing a collection of engineering and surgical instruments of delicate make and exquisite finish, including rules, sextants, quadrants, compasses and lancets, and knives of the finest manufacture and all highly polished.

"Every one of these scientific instruments," continued the proprietor, "is made from the same stock which you saw dumped upon the ground a few moments ago. We make a regular business of buying up used-up saws from carpenters, cabinetmakers and others all over the city, which we transform into these delicate tools, and they are the very best materials for our purpose. It is not generally known that saws are made of the finest and best-tempered steel, but it is a fact, and, therefore, as we get them at prices usually paid for junk, you see it is much cheaper than manufacturing our own product."
—*New York Mail and Express.*

A Big Lumber Mill.

Mr. J. E. Parker, of Ottawa, who has just returned from an extensive tour throughout Washington Territory, gives an interesting account of what is said to be the largest saw mill in the world. The mill is situated at Port Bleakly, near Seattle Wash., Territory, and is 404 feet by 101. It cost $200,000, and has to drive the machinery, twelve boilers and eleven more are being put in and two five-hundred-horse power engines. One hundred and fifty men are now employed, and when the mill is completed, three hundred men will be employed in the mill proper. The largest trees cut turn out about 15,000 feet each and the largest logs cut are 160 feet in length. The amount of lumber used in the construction of the mill was 3,000,000,000 feet. The principal of the mill is a blind man, and the manager a young lady who, Mr. Parker says, can talk lumber with any person.

The Rage for Red Oak.

The lovers of the beautiful, not only those of really æsthetic tastes, but the plebians patricians alike, says a lumber trade journal, have only begun to realize the true beauty of red oak and are in danger of satiating themselves. Red oak at the present time overshadows all other woods together in this city for the interior finish of the better class of buildings. The furniture manufacturers say that no other wood, either American or foreign, ever had such a run as oak is enjoying today; there is a greater demand for oak furniture, in every section than for that of all other woods combined, and the consequence is the red oak men are reaping a rich harvest, which bids fair to continue—well at least until popular fancy skedaddles in some other direction.—The *Wood-worker.*

THE NEWS.

ONTARIO.

—Parry Sound Lumber Co's mill has shut down for want of water.

—Vessel men complain of the time taken to load lumber at Parry Sound.

—This promises to be one of the busiest lumbering seasons ever seen in Algoma.

—The water in the Ottawa is rising rapidly owing to the recent heavy rains.

—The Canadian Lumber Cutting Company, of Belleville, employs twenty-five men.

—The Rainy Lake mill, at Rat Portage is now running in earnest, the water in the lake having subsided.

—Lumbering operations in the vicinity of Sudbury will be carried on to about the same extent as last season.

—Large quantities of oak timber are being shipped through Owen Sound for the C.P.R. elevator at Fort William.

The Canadian steam barge Kincardine, lumber laden, is sunk at French River, Georgian Bay, insured for $4,000.

—The cedar block pavement laid down in the Deseronto dry-kiln yard six years ago is as good as the day it was put down.

—The Rathbun Company, of Deseronto, have opened a lumber office in Mr. W. C. Bang's new block on Elgin street, Ottawa.

—Ottawa lumber forwarders expect a busy time till the close of navigation, as several large shipments have been contracted for.

—Between low water and sawdust the Chaudiere lumbermen are experiencing a great deal of trouble in loading barges at their docks.

—Mr. S. A. Smith is putting up a large addition to his saw mill at Port Sydney. He intends cutting about two millions next season.

—The Ontario Lumber Company, Thomson & Baker, the Muskoka Mill and Lumber Co., and several other firms have started their winter operations.

—The American tug "Gladiator" was seized at Algoma Mills by Special Customs Officer Watters, for towing a raft of logs in Canadian waters without the necessary permission.

—Mr. William Mills, of Torbolton, is about concluding the sale of the old O'Meara limit on the Ottawa and Pettewawa rivers to the C.P.R. but the figure has not transpired.

—Jas. Dollar's shingle mill in the township of Brunell, Muskoka, shut down a week ago, having cut 5,911,000 feet in 215 days. It will be started up again in November if not sooner disposed of.

—Among other little nick knacks the government dredge has yanked out of the canal at Hamilton a huge oak beam, 40 feet long and 2 feet thick, which has been there for 30 years.

—Bush fires have done great damage on many of the beautiful islands in the Parry Sound Archipelago. Both Indians and white campers are blamed for causing the destruction by carelessness.

—The Conger Lumber Co's. mill at Parry Sound was run time and a quarter in the early part of the month in order to fill a large order for the construction of new bridges on the C.P.R. main line.

—The Saginaw Lumber and Salt company have purchased 20,000,000 of pine situated on Fitz Williams Island in the Georgian Bay district. The purchase was made for spot cash. The timber is to be cut at once.

—J. R. Booth & Co. have purchased the Moore timber limits on lake Nipissing for $46,000. The limits are 88 square miles in extent and belonged to Mr. E. D. Moore of Ottawa. They are considered the best in the Nipissing country and have only been worked for square timber.

—Mr. James Findlay, ex-M.P. for North Renfrew proposed some time ago selling his timber limits on the Ottawa river by auction at the Grand Union in October but has withdrawn the sale. The limits are situated near the Ottawa river on the line of the C.P.R. a little west of Bass lake.

—It is reported that Mr. Sandford Fleming will present his report on the examination of the sawdust question as affecting the Ottawa river, about the 15th inst. The report, it is said, will go to show that the bays along the shores of the river, especially those in the vicinity of the city were being gradually filled up with sawdust, but that it will be shown that it does not lodge in the channel of the river, except perhaps a little towards the fall season when the current [illegible].

—To facilitate the passage of their drive down the Mississippi, Messrs. McLaren & Edwards built a dam which raised the water four feet. When the water was let out it raised the river two feet between Playfairville and Ferguson's Falls, damaging the hay, and the farmers are claiming damages.

—The work of rafting the timber floated down the Moira to Belleville was completed early in September. The amount rafted was 13 drams, averaging 35,000 feet each, making a total of 455,000 feet. This work employed a considerable number of men and caused the expenditure of a large sum for switches, etc.

—Edwards & Co's great saw mills at Rockland, Ottawa County, have a great run this season, and yet there are an immense number of logs to be cut before winter sets in. New and improved machinery has been introduced in the shape of great band saws about 60 feet long, and are run off on 8 feet wheels.

—Three hundred and sixty-one square miles of pine timber limits on the Ottawa and tributaries, the property of Mr. R. White, of Pembroke, and others were offered for sale at auction at the Russell House, Ottawa, on September 13th, but in no case was the reserve price reached and the whole were withdrawn.

—The Georgian Bay Lumber Company had Mr. George Caswell, of Coldwater, before G. J. Booth, Esq., J.P., charged with appropriating their logs, found floating in the Georgian Bay, but bearing the Company's mark. A *prima facie* case being made out, the defendant was committed for trial, bail being accepted for his appearance.

—Mr. Beck has put in the New Keene Mills, Penetang., the machinery and frame work for a large band saw, which is now in running order. The saw is 50 feet in length, containing 480 teeth, and running on two cast-iron fly-wheels 8 feet in diameter. This will be a great addition to the working capacity of the mill and will make the lumber fly in earnest.

—The outlook for the lumber trade in the Ottawa valley is unusually encouraging, and the operations of the coming season will be largely in excess of last year. In square timber the increase will be greatly felt, at least double last year's cut will be made. Every day large gangs are leaving for the woods and in all firms great activity is being shown.

—An American fleet of five vessels took from Parry Sound about 1,700,000 feet of lumber early in September. The *Star* says the crews complained of the length of time occupied in loading a vessel and of the absence of professional dock hands. If they would pay the wages per hour usually received by dock hands, they would secure the class of men and the amount of activity they desire. A man doesn't throw himself for $1.25 per day.

—The lumber yards at the Chaudiere are congested at present. The shipping carrying lumber from Montreal and Quebec is quite inadequate to the quantity of lumber going to the English market. From Ottawa alone nearly ninety million feet of lumber are shipped to that market. The stoppage of this outflow from the Chaudiere yards is rapidly filling them up, and work will have to be stopped if the movement of lumber be checked much longer.

—At Ottawa the Canada Atlantic railway company have at last got their Chaudiere extension into working order. On Saturday, September 8th, the first shipment of lumber was made over the new extension. The shipment consisted of thirty-two cars of lumber from Messrs. J. R. Booth's yards consigned to Messrs. Shepherd and Morse, of Burlington. The company have men laying down platforms between the four terminating switches of the line where lumber from the yards will be loaded. The idea of extending the tracks across Bridge street into Booth's lumber yards and also across on to Victoria island into Messrs. Bronson & Weston's yards has been abandoned till next spring and for the present the lumber for shipment will be loaded at the Crown acre station.

—Messrs. Gilmour & Co's big mill at Trenton, has, it is said, had one of the most successful runs known in the history of that institution. The cut will average over 500,000 feet per day, or in the neighborhood of 78,000,000 feet for the season, which will end about November 8th. The shingle mill belonging to this company has in addition turned out over 240,000 per day, which will make the total output over 35,000,000. This is fully one-half more than last year, and has been accomplished with the same number of men. Preparations are now being made for the starting of a cedar mill to cut ties, posts, and cedar shingles. The new mill will start operations about Oct. 1st, and will give employment to from twelve to fifteen men.

—The Michael's Bay Lumber Company, of 9 Victoria street, Toronto, and Michael's Bay on the North Shore, composed of representatives of several large lumbering con[illegible] have [illegible] ments, and asked for an extension. The principal members of the firm are Alexander. R. Christie, of Christie, Kerr & Co., who is the president, R. A. Lyons and C. H. Wilson. The company dealt with the now defunct Central Bank, and before the smash they made arrangements with Cashier Allen for accommodation when it should be required. With the suspension of the bank the main support of the company was removed. The advances made by the bank are secured by mortgages on the company's property and the payment of these mortgages have fallen due. The scarcity of funds compelled the firm to suspend and seek an extension. Liquidator Lye said that the company would be granted whatever extension was required, while the manager of the bank intimated his willingness to advance any amount of money the company might require to get them out of their present difficulty on the security which they have heretofore given. An effort is being made by the company to dispose of their property on which they expect to realize sufficient to pay off their entire indebtedness. The present difficulty will have no effect upon the firms of the members of the joint stock company.

—From the *Journal* we learn that the recent timber limit sale at the Russel House, Ottawa, was a slow affair, very little interest being manifested, in fact lumbermen who were present fighting shy of bidding at all. Four blocks of timber lands, owned by Mr. Richard White, of Pembroke, and containing about 241 square miles, were put up, the auctioneer, Mr. Tackaberry, beginning with the second block of 50 square miles on the Colounge river. Bidding on this started at $20,000 and slowly crept up to $34,700 and then ceased. Mr. White then withdrew the limit. The next to be put up was 101 square miles on the Black river. The auctioneer took the Crown Lands Department style in getting this off by offering it by the mile for the whole block. Bidding started at $200 and meandered slowly up to $540, and as bidding stopped at that figure, the block was withdrawn. Similarly block 3, containing 70 square miles on the Coulonge river and 20 miles on the Ottawa was put up and after lingering for a short time, was withdrawn. Then Mr. Tackaberry tried 100 square miles of white pine on the Jean de Terre but as only $11,000 was offered for it that sale also flopped. The Hiban limit on the Coulonge was then set up and after some dulsatory bidding withdrawn at $7,800. This limit had an area of 21 miles. The chief reason attributed for the want of sale was the lateness of the season, the lumbermen having their plans for their winter operations completed. It is understood that Mr. White's reserve bid on the whole four blocks was $200,000.

QUEBEC.

—The Henderson Lumber Co., of Montreal, are interested to the extent of $3,415 in the recent failure of Dame Flora Smith, cigar manufacturer, of the same place.

—Mr. G. B. Green, manager of the Upper Ottawa Improvement company has returned from the Quio where he was inspecting the company's works. The tail of the Upper Ottawa drive arrived at Des Joachims about the 15th instant. The water in the river is low but few logs were reported stuck.

—Application for incorporation is made by the Ross McLaren Lumber Company, with a capital of half a million dollars, for the purpose of manufacturing, shipping and dealing in lumber. The applicants are Hon. James Ross, of Quebec; Jas. McLaren, Buckingham; Leonard Greenham, Little Montreal; William Henry Higgins, New Westminster, and Charles David Rand, of Vancouver. The chief point of operations will be at New Westminster, and that it is proposed to ship to the Australian, Japanese and South American markets.

—There is a slight improvement noticeable in the Montreal market and values continue firm. At the mills the manufacturers have increased their prices, but so far there has been no augmentation. Dealers not being able to buy at former rates, are by no means urgent sellers, and in consequence, the tendency has been to discourage business. The contractors are beginning to make their season's inquiries, but have as yet made no purchase of importance. At the mills there is considerable activity in the fulfillment of orders already on hand, which it is said will take some time to work off, the available supply outside of that being very limited.

—The saw mills of the E. B. Eddy Manufacturing Company at Hull have suspended operations for want of logs. The Eddy Company have lost considerable time during the past season owing to their logs not having reached the Chaudiere as early as usual. This difficulty will be done away with next season as the company intend putting on an unusually large number of men into their new Magnissipi limits, and will cut sufficient logs to keep them running night and day watch during the whole of next season. The transfer of Messrs. Hurdman &

Co.'s Magnissipi limits to the Eddy Manufacturing Company was made on the 17th Sept. The price paid, as stated in the deed of transfer was $325,000. The general impression among the lumbermen is that the Eddy company have secured one of the best pieces of pine country in the Ottawa Valley. The company intend only working their new limit for logs. No square timber will be taken out.

—As will be seen from the following comparative statement of timber measured through the supervisor's office at Quebec, the quantity of white and red pine falls very much short of that of 1886 and 1887, made up to the same date in each year, viz., September 5th. The figures are for cubic feet.

	1886.	1887.	1888.
Waney White Pine	2,365,398	1,820,243	1,220,025
Square " "	2,172,838	945,082	863,997
" Red "	243,392	560,005	484,875
Oak	829,677	513,866	736,658
Elm	378,541	196,872	166,605
Basswood	218	535	717
Butternut	192	1,079	419
Tamarack	3,459	5,507	3,130
Birch and Maple	160,641	116,694	156,647

—McLaren and Ross, ot Quebec, the former being connected with the Saginaw Lumber and Salt company, have purchased 1,500,000,000 feet of pine timber in British Columbia where they will erect and equip two large mills for its manufacture into lumber. The Saginaw lumber and Salt Company has given a contract to Barrie, Ont., parties to cut 10,000,000 feet of timber from their tract on Fitzwilliam Island, in Georgian Bay, to be rafted to Saginaw. The Emery Lumber Company will this winter cut 14,000,000 feet on the waters of Georgian Bay, to be manufactured at Midland, Ont. The lumber market is active and prices up to the top notch.

—Rev. Father Paradis, whose name was prominently brought before the public some months ago in connection with a misunderstanding between him on the one side and the Gilmour lumber merchants of the Upper Gatineau, Hon. J. J. Ross and Rev. Father Augier, on the other, has arrived in Montreal from Buffalo, whence he was spirited away some months ago, on his way to Quebec, and thence to Rome. The object of the reverend gentleman's trip to Canada has not been made known, but it is asserted on excellent authority that he goes to the Eternal City upon the advice of Bishop Ryan, of Buffalo, for the express purpose of protesting against his recent expulsion from the Oblat Order. Exactly why Father Paradis has been expelled from the order has not yet leaked out, but it is stated that the sole cause of his misfortune is the fact that he persistently refused to sign a retraction of the damaging statement he had made against Hon. Mr. Ross and allow the whole discussion thereon to drop.

—Quite a commotion was created at Eastman's Springs, on the Canada Atlantic railway, a short time ago, by the disappearance of two brothers John and Robert Stewart, who for several years have been doing a lumbering business in a small way at that place. The brothers left saying they were going on a trip instructing their clerks to sell lumber as usual and forward receipts to them. Mr. Neil Stewart, father of the young men upon learning of their departure, seized the mill upon which he had a mortgage of $1,200. A Mr. Baker of North Gower also hearing of the departure of the Stewart brothers visited Eastman's Springs and again seized the mill upon a first mortgage for $1,500. Mr. John Kyle, a grocer at the Springs, was victimized to the extent of $400, having signed the firm's paper to that extent before hearing the true state of affairs. Another man named Morgan had bought some logs to be cut at the mill before the departure of the brothers and after their departure came to get his lumber. He was told that he could have no lumber unless he paid for it. Morgan grew indignant took away a pile of lumber made from his logs and a few days afterwards had to pay $18 for his own lumber on the order of the district magistrate before whom the case came up. The affairs of the firm are in a bad condition and claims are coming in thick and fast. The Stewart brothers have not since been heard of.

—A Quebec city despatch of September 13th said: "Not a stick of square white pine remains unsold in the hands of lumbermen. The whole stock in port, as well as this year's make to arrive, has passed into the hands of shippers, this being a condition of things that never happened in the port before, besides which there is only 30,000 feet of waney board pine unsold to arrive, all this year's manufacture and what is now in port, with the above small exception having been bought by the timber merchants. The latest purchases were A. Fraser's Nipissing raft to arrive, bought by Messrs. W. & J. Sharples, and A. Fraser's Operongo rafts, and Caldwell's rafts in port. These two latter were bought by Messrs. J. S. Murphy & Co., these purchases by the latter firm amounting to over three quarters of a million feet. The stock of white pine timber to winter here will be unprecedentedly small and the question has repeatedly been asked: 'How are we going to load next springs fleet?' Fortunately, with their utmost efforts, were they unwise enough to attempt it, the lumbermen could not overstock the market for two years to come, but with the few lumbermen owning the timber bearing lands in Canada they are not likely to attempt to overstock the market as they have done in recent years to their cost, because the enormous prices which timber lands brought at the last public sales have given lumberman a keen appreciation of the value of standing timber.

NEW BRUNSWICK.

—There has been considerable activity about the wharves and lumber yards at Richibucto loading the vessels in port.

—The long-talked-of steam saw mill to be erected in Richibucto is to be a sure thing. The place selected is what is known as the Yellow House Point at the north-east extremity of the town.

—T. H. Ramsay, of Newcastle, has bought the Redbank Mills, Miramichi, from J. B. Snowball, and enters into possession at once. He intends to add steam power for the manufacture of shingles and other small lumber.

—There is a great jam of logs in the St. John at the Grand Falls. It fills the river for a distance of from 1,500 to 2,000 feet and is 30 to 100 feet deep. Lumbermen estimate the quantity to be from twelve to fifteen million feet. An attempt to start it with dynamite was to have been made but on examination it was considered useless. Probably nothing but the spring freshet will move it.

—It is estimated by experienced lumbermen that there has been cut on the Penobscot river the past year fully 150,000,000 feet of logs, an amount which is said to be equal to that cut years ago during the palmiest days of lumbering. Tracts that have been cut over thirty years ago have been gone over twice since and the growth about keeps pace with the demand for lumber.

MANITOBA AND THE NORTHWEST.

—At Brandon, Mr. Christie, has been working his mill night and day on logs from Riding Mountains.

—The harvesting operations lessened the demand for lumber and enabled the mills to get ahead of orders.

—Jonnasson, Frederickson & Walkely forwarders and lumber dealers, Selkirk, Man., are organizing a joint stock company.

—Upwards of one hundred men were employed at Selkirk last week unloading lumber at the docks, and lumbermen complain of lack of men.

—The Rainy Lake Lumber Company has been purchased by the Western Lumber Company, of which Mr. McRae, of Quebec, is president.

—Christie's drive of logs from the Bird Tail have all reached Brandon. The mill is working night and day, with a staff of about fifteen men.

—Thos. White and another prominent Michigan lumberman are exploring the timber limits to the north of Calgary. Their visit has also something to do with development.

—Mr. Tait is engaged with a number of men in improving the Bird Tail river between Birtle and Riding Mountains, Manitoba. The object is to make the stream more suitable for the passing of saw logs from the mountains. It is expected that 5,000,000 feet will be taken out this winter.

—Lake Winnipeg mill men are pushing to get the lumber herald out before the closing of navigation and all the craft on the lake are employed carrying the cut to Selkirk, the head of deep water navigation on the Red River, and the nearest railway point to the mills.

—J. A. Christie's logs from the Bird Tail river are first class, some of them measuring over two feet through. It is the intention to cut them into dimension lumber. About half of them will be cut this season in the old mill at Brandon, Man., and the balance will be cut in the new mill which he will build next spring.

—The lumber trade throughout Manitoba is reported in a satisfactory condition. Orders can now be filled in a reasonable time, and customers are not subject to any serious delay. Mills look forward to upwards of a month more of activity, and are reporting very favorable as to the season's business as a whole. Prices remain about the same.

BRITISH COLUMBIA.

—A new saw mill is in course of construction for Dunsmuir & Sons, at the Union Coal Mines, Comox district, B. C.

—A stick of timber was cut the other day at the Hastings Mill which was 106 feet long and 24 inches square. There were sawed out of the log 12,000 feet of cedar lumber weighing 30 tons.

—The barque Jan Baas has sailed for Melbourne with 509,412 feet of rough lumber and 15,205 bundles of pickets from the Moodyville mill. It is said that the captain of the barque has been fined $400 for not clearing at customs.

—A portion of the C. P. R. wharf at Vancouver has sunk considerably owing to the heavy traffic being done on it at the present time, and the depredations of the terredo. A large surface of the City Wharf has also sunk several feet from similar causes.

—There is a hitch in the arrangements regarding the proposed establishment of the mammoth mill at Westminster, B. C., by Ross & McLaren, of Ontario. The trouble is over the timber lands which the projectors are endeavoring to secure from the Provincial Government.

—The first vessel of the two chartered by the Royal City Planing Mills is the barque Nanaimo which was built in the black diamond city of that name some six years ago. When loaded she will carry fully 800,000 feet of lumber and her destination will be Melbourne, Australia.

—New Westminster is naturally anxious to have the saw mill of Ross & McLaren, eastern lumbermen, who propose to carry on extensive operations in British Columbia, located there. The capacity of the proposed mill will be over half a million feet per day, or larger than the capacity of all other mills in the province.

—The enterprising and wealthy firm of A. Broder & Co., of Morrisburg, Ont., have purchased a large tract of land on Alberni canal, and will proceed at once to erect a small saw mill preparatory to the construction of a larger one, having a capacity for 100,000 feet per day. The firm named is well known in the county of Russel, Ont., for which constituency Mr. Broder was at one time a representative in the Ontario Legislature.

—The Vancouver *Herald* says:—The Moodyville mills are kept busy night and day at present loading the vessels at the wharves, of which there are five: the Jan Baas, the Edward O'Brien, the W. J. Rotch, the Balaklava and the Pactolus. The three former are now almost loaded and will proceed to sea shortly. The barque India and the ship Earl Granville are both anchored in the stream waiting for berths at the wharves.

—The Moodyville saw mill is running night and day to its full capacity. A recent report says that there were six vessels at the dock—most of which are loading—which will take away 6,200,000 feet of lumber. The Balaklava takes 1,100,000 feet to South America, The Pactolus 9,000 feet to China the India 900,000 feet to South America, the Earle of Granville 1,000,000 to Australia, the Edward O'Brien 1,400,000 to Australia, and the Jaen Baas takes 900,000 feet to Valparaiso, South America. The mill is supplied with logs from the various camps along the coast, some of which are distant about 200 miles.

—The owners and managers of the various saw mills of Vancouver who cut for the local trade, have agreed upon a new schedule of prices which has come into effect and contains a considerable advance in the price of the principal sorts of lumber. The following extracts from the list will give an idea of the prices now asked: Bridge and wharf plank and lumber from $12 to $16 per M feet, B. M., according to length. Flooring from $17.50 to $27.50, according to the size and quality. Rustic from $17.50 to $22.50, according to quality. Boards, S. S. $20 to $22.50. Laths and shingles $2. The demand for lumber is very good, all the mills being kept busy supplying it. The number of men employed among the various mills and yards in the city is continually increasing and the business generally assuming large proportions.

—Pacific Coast lumbermen in British Columbia, continue to find an active demand. At Burrard Inlet the mills are working night and day on export orders, and latest reports stated that several ships were anchored waiting their turn to load. The Westminster mills are busy with local and eastern orders. The Royal City mill at that place has an order from a car building company, of Dayton, Ohio, for square timber for car sills. The timber is required to run 60 to 70 feet in length and perfectly sound. During August seven ships cleared from the two Burrard Inlet mills for Australia, with lumber, lath and pickets. Two ships cleared from the Royal City mill at Westminster, taking the first exports of lumber ever made direct from Frazer river mills, the river having only recently been made navigable for ocean craft.

—The owners and managers of the various saw mills of Vancouver who cut for the local trade, have agreed upon a new schedule of prices which has come into effect and contains a considerable advance in the price of the principal sorts of lumber. The following extracts from the list will give an idea of the prices now asked: Bridge and wharf plank and lumber from $12 to $16 per M feet, B. M., according to length. Flooring from $17.50 to $27.50, according to size and quality. Rustic from $17.50 to $22.50, according to quality. Boards S. S. $20 to $22.50, D. D. $25 to $25.50. Laths and Shingles $2. The demand for lumber is very good.

all the mills being kept busy supplying it. The number of men employed about the various mills and yards in the city is continually increasing and the business generally assuming large proportions.

AMERICAN.

—The Frost Lumber company, of Detroit, has failed.

—A forestry convention is to be held in Cincinnati this fall. The exact date has not yet been settled.

—The New Jersey Lumber Company, Jersey City, N. J., has been incorporated under the same name.

—The daily capacity of the St. Paul & Tacoma Lumber Company's new sawmill at Tacoma is estimated at 630,000 feet.

—Extensive forest fires have been raging near Bay City, Mich., and an incalculable amount of damage has been done.

—Maine lumbermen are beginning to send men, horses and supplies into the woods in preparation for the winter campaign.

—The August shipments from Muskegon, Mich., footed up to 66,616,000 feet of lumber, 23,000,000 shingles, 1,500,000 lath, 4,194 cords of slabs and 240 tons of sawdust.

—Robinson & Lacey, the well known pine land dealers of Grand Rapids, Mich, have associated with themselves in their Canadian timber business R. A. Haire, formerly an extensive lumberman on Grand River, but for the past two years an explorer of Canada limits.

—It is very dull in the coasting trade now. About half the coasting fleet are laid up, and the present rate of freight, $3.50 per M, hardly pays running expenses, to say nothing of leaving any profit to the owners.

OUR TIMBER EXPORTS TO BRITAIN.

Since our last issue the following cargoes of Canadian wood have been reported entered at the various United Kingdom ports :—

AT ABERYSTWITH.—Huldin from Bathurst, 11,177 deals.

BARROW.—Jens Willsen. Halifax, 8,021 deals and ends, 1,200, palings. Oscar II., St. John, 18,916 deals. Sheffield, Parsboro, 25,109 deals. Oscar, Halifax, 11,660 deals and ends.

BEAUMARIS.—Haabet, Halifax. 8,428 deals, 637 spruce boards, 59 birch logs.

BELFAST.—Drammenseren, Three Rivers, 30,453 deals. Oscar, Quebec, 26,378 pcs sawn fir. Aren, Quebec, 16,732 pcs sawn fir. Atlas, Miramichi, 19,829 deals and ends. Norman, Miramichi, 27,275 deals and ends, 16,800 palings.

BRISTOL.—Draupner, Sackville, N.B., 15,133 deals, 157 scantling 1,100 ends, 333 bundles palings. Skien. Halifax, 20,915 deals, ends and battens. James L. Harway, Montreal, 23,261 deals and ends. Ontario, Montreal, 6,244 boards, 1,072 pine deals, 415 spruce deals. Texas (s), Montreal, 6,218 spruce deals.

CARDIFF.—Ingleside, St. John, 27,415 deals. Parmatta, Quebec, 249 pcs hewn oak, 1,223 hewn fir, 78 elm, 3,464 deals, 2,400 oak staves. Senator Weber. Quebec, 347 pcs oak. 497 hewn fir, 5,327 deals, 1,034 pcs sawn fir.

CARNARVON.—Dover, Economy Point, 7.897 deals, 1,542 spruce boards, 939 deal ends.

CHESTER.—Corns, Richibucto, 8,028 deals, 1,837 boards, 1,125 deal ends.

CORK.—Pacific, Quebec, 18,654 deals, 1,147 deals and ends, 6,000 palings. George Peake, Quebec, 15,978 deals, 1,097 deals and ends. Reform. Pentecost, 14,033 deals, 1,541 deals and ends. Douglas, St. John, 16,536 deals, 2,436 deal ends. Endrick, St. John, 12,257 deals, battens and ends. Syringa, St. John. 17,535 deals and battens. 2,189 ends. Maggie M., St. John, 12,764 deals.

DOUGLAS (ISLE OF MAN).—Peterel, Halifax, 3,878 spruce deals.

FLEETWOOD.—Queen, Miramichi, 49,424 deals, 17,655 sawn fir. Alexandra, West Bay, N.S., 15,943 deals. Anna, West Bay, 16,625 deals. Halden, Miramichi, 28,641 deals, Stella, Halifax, 18,321 deals. St. Joseph, Quebec, 919 pcs hewn fir, 69 pcs hewn oak, 30 pcs hewn ash, 9,903 deals. Panama (s), Quebec, 2,278 deals, 137 logs hewn oak, 71 pcs elm, 1,200 pcs hewn fir, 16,780 deals.

GLASGOW.—Grecian, Montreal. 11,396 deals. Circe, Montreal, 653 deals, 962 pcs oak lumber. Corean, Quebec, 117 pcs timber, 7,261 deals. Vigo. Weymouth, N.S., 283 pcs birch, 9,426 spruce deals, 800 spruce deal ends, 328 deals, 55 deal ends. Colina, Montreal, 4,323 deals, 239 oak planks, 1,202 deals. Louise, Halifax 13,167 deals, 1,137 ends. Carthaginian, Montreal and Quebec, 175 logs birch, 24 logs maple, 2,490 deck planks. 3,873 deals, 599 deal ends. Norwegian, Quebec, 7,370 deals, 2,658 bundles spoolwood. Concordia, Quebec. 289 logs ash, 307 pcs oak lumber, 12,491 deals.

GLOUCESTER.—King Carl, Bathurst, 19,875 deals. Maria, Bathurst, 36,440 deals. Ebba, Campbelton, 23,021 deals. Uranos, Halifax. 550 lds sawn fir.

GREENOCK.—Prince Eugene, Quebec, 2,652 pine deals, 955 pine pine deal ends, 1,914 pcs spruce, 437 ash, 91 elm 167 red pine, 522 waney white pine, 298 waney boards. Terzo, Quebec, 135 pcs waney pine, 1,411 spruce deals, 498 pcs waney white pine, 23 square do., 153 oak, 11 hickory, 222 red pine. Skibladney, Quebec, 183 spruce deals, 29,538 bundles spoolwood, 243 birch planks, 2,350 spruce deals. Europa. Bathurst. 16,346 deals, 1,466 deal ends. Enterprise, Quebec, 200 pcs elm, 102 pcs ash: 1,323 pcs white pine, 4,643 deals, 159 pcs oak, 56 pcs red pine.

HARTLEPOOL, WEST.—Antoinette, Quebec, 80 pcs oak, 56 pcs elm, 22 pcs walnut, 559 pcs hewn fir, 3,184 deals. Flora, Quebec, 46 pcs hewn oak, 33 pcs ash, 120 pcs birch, 260 pcs hewn fir, 21,450 deal ends.

HULL.—Bishop Brun, Quebec, 125 pcs elm, 663 pine, 3,450 deals.

INVERNESS.—Elizabeth, Quebec, 130 pcs hewn oak, 2 pcs hickory: [illegible] pcs elm, 80 pcs hewn pine, 3,553 deals,

LANCASTER.—Minerva, West Bay, 11,959 deals, 1,208 birch planks.

LIVERPOOL.—Lake Superior, Montreal, 8,989 deals. 4,382 boards. Circassian, Montreal, 9,836 deals, 98 pcs timber; from Quebec, 4,515 pine deals. Oregon, Montreal, 15,860 deals. Niceto. St. John, 4,257 birch planks, 843 birch ends, 1,564 scantlings, 47,334 deals, 12,942 ends. President Harbitz, Bay Verte. 21,100 deals. Glenola, Halifax, 512 spruce ends, 14,247 spruce deals, 150 birch ends, 1,308 birch deals, 302 pcs juniper, Petitcodiac, Hillsborough, N.B., 669,586 superficial feet deals, 827 feet scantling, 6,586 feet ends. Excelsior, St. John, 949 pcs timber. 17,134 deals and battens, 696 scantlings, 6,131 deal ends, 1,044 boards. Magnificent, Quebec. 36 pcs oak, 291 birch, 111 elm, 85 ash, 945 white pine, 4,993 spruce deals, 1,177 spruce ends. Buenaventura, St. John, 29,255 deals. 1,624 scantling, 7,542 deal ends, 3,049 boards, 1,744 birch planks. Boromo, Richibucto, 27,428 fir deals and ends. King Oscar II., West Bay, 22,475 deals and battens, 215 scantlings, 1,496 deal ends. Nathanail, Bay Verte, 513 battens, 17,082 deals and battens, 1,827 deal ends. City of Liverpool, Quebec, 281 pcs oak, 140 elm, 34 red pine, 1,039 white pine, 120 pine deals, 2 089 pine boards, 81 pcs ash, 1,132 pine deal ends. Lake Nepigon, Montreal, 9,045 deals, 7,242 pine and spruce boards, 130 stds deals. Europa. Halifax, 16,822 deals and battens. 691 deal ends, 1,692 boards and scantlings. Polynesian, Montreal, 5,643 pine deals; Quebec, 1,296 pine deals, 13,980 birch scantlings. Anglo America, Quebec, 300 pcs red pine, 3,903 spruce deals, 549 pcs white pine, 222 logs birch, 170 pcs oak, 48 elm, 76 ash, 118 square white pine, 284 waney white pine, 2,034 pine ends, 4,850 staves. Oxenholme, Montreal, 12,904 staves, 14,315 deals, 6,487 ends, 424 pcs lumber. Lake Huron, Montreal, 8,596 deals, 9,233 boards, 2,711 spruce boards. Vancouver, Montreal, 19,014 bds, 3,270 red deals, 10,854 deals and ends. Sarmatian, Montreal, 1,782 spruce deals.

LONDON.—Nicolet, Quebec, 10,866 deals, 467 pieces pine, 167 fms. elm, 788 staves. 26 walnut, 154 oak. Bothal, Montreal, 13,443 deal ends, 40,000 deals. Neslone, Montreal, 20 pkgs. boards. Hermanos, Pentecost, 13,078 deals, 12,508 planks, 2,083 ends. Murciano, Montreal, 8,405 pieces lumber; Quebec, 6,393 deals, 380 pcs. birch, 281 ash, 600 bundles box shooks. Fremona, Montreal, 1,075 pieces lumber, 23 birch 6,907 walnut, 10,698 deals, 75 ash. Chateau Leoville, (s) Montreal, 37,017 fms deals, 2,396 ends, Grey Colin, Montreal, 61,617 fms deals, 7,081 ends. Hovding (s), Quebec, 44,608 deals, 3,768 ends, 13,091 staves. Damara (s), St. John. 14,557 deals, 153 scantlings, 3,153 ends.

Lack of space forbids an extended report being continued, but up to September 15th the following additional timber imports from Canada were entered at the various ports of the United Kingdom: Pine and spruce deals and ends 207,704, sawn and hewn fir 52,654, birch and spruce planks 9,687, boards 7,455, and oak, ash, walnut, pine, cherry, &c., logs and hewn or square timber 27,263 pcs.

OUR ADVERTISERS.

No better indication of the rapidly increasing popularity of the CANADA LUMBERMAN as an advertising medium can be found than the large number of new announcements which are from month to month finding a place in its columns. The list of new names appearing in the current issue is unusually large, and we take pleasure in appending a brief notice concerning each :

The well-known firm of Patterson & Hall, of Toronto and Midland, have done what every lumberman in the country should do—inserted their business card in THE LUMBERMAN.

The Geo. Bishop Engraving Co., of Montreal, lithographers, engravers and printers, is one of the largest firms of the kind in the Dominion. Their work speaks their worth, and a perusal of their advertisement will doubtless prove of interest.

Recognizing the fact that lumbermen are large consumers of the necessaries of life, the enterprising firm of J. W. Lang & Co., wholesale grocers and importers, of Toronto, make use of our columns to advertise their business.

The attention of shippers to South America is called to the notice of Mr. D. M. Rennie, of Beaunos Ayres, who is prepared to accept agencies for the Argentine Republic and Uruguay, from the manufacturers and shippers of Canada.

Reynolds & Kellond have been so long in Toronto and Montreal, as solicitors of patents and experts in patent cases that a simple announcement of their business is all that is necessary to command attention. We would direct attention to their card.

The Department of Public Works call for tenders for the replacing of the present roadway to the Suspension Bridge across the Ottawa river, at the city of Ottawa, with an iron truss bridge. Tenders are to be received up to noon on the 5th inst.

Mr J. J. Turner, the extensively patronized manufacturer of tents and awnings and lumbermen's supplies, Peterborough, Ont., has again inserted his card in these columns. Mr. Turner's manufacture is highly spoken of wherever used, and as a result his business is rapidly assuming large proportions.

Our Amherst N. S. Correspondent writes that A. Robb & Sons sent our of this siding one day lately, two Hercules engines with Monarch boilers and smoke stack complete both going to Kings Co N. B. and also one of their Shingle Machines to Newfoundland this makes four Shingle Machines this firm have shipped within a month or two.

By reference to the space occupied by him, it will be observed that Mr. James Leslie, one of the oldest members of the trade in Montreal, is again pushing his [illegible] in English Oak Tanned Leather B[illegible] position to supply all users of belting with complete or partial outfits promptly and at prices which will compare favorably with those of any other [illegible]

It is always pleasing to notice evidences of improvem[illegible] and prosperity among the manufacturer[illegible] Hamilton Manufacturing Co., of Peterborough, gratify that feeling very frequently. They are now forced, by the pressure of increasing business, to enlarge their pre[illegible] e rection of an addition to their workshop. The new building will be 160x34 feet and two stories high.

We have received a very handsomely gotten up circular from Lewis Bros. & Co., Montreal, wholesal[illegible] ware and lumbermen's supplies. These gentle[illegible] the importance and extent of the great lu[illegible] contracted with THE LUMBERMAN for [illegible] We would recommend our readers to keep a careful lookout for the changes in the space controlled by this firm as they handle many articles of interest to the lumber trade.

Mr. Geo. Brush, the veteran proprietor of the [illegible] dry, King and Queen Streets, Montreal, makes a modest [illegible] play on another page. If we have been rightly informed this is about the oldest foundry and machine shop in the city of Montreal, and the many years of liberal patronage bestowed upon it never seems to wane. As usual a specialty is made of saw mill machinery, engines and boilers, etc., which for quality and price would be difficult to surpass.

The Royal Electric Light Co., with headquarters in Montreal, have contracted for a respectable space to advertise their rapidly increasing business as manufacturers of dynamo machines, lamps, motors, etc., and as contractors and builders of electric light plants. Mr. Chas. W. Hagar, the manager of the company, is a thoroughly qualified electric[illegible] and in every way competent to give intending users of electric light apparatus the best of satisfaction.

The J. C. McLaren Belting Co., of Montreal, one of the oldest belting houses in the Dominion, again present their claims for patronage to the lumber and allied trades. They have now something entirely new to offer, an illustration and particulars of which appear in their advertisement elsewhere. Since the sudden and lamentable decease of the head of this firm some months ago, extensive improvements have been made in their mode of manufacture, and the onward progress of the firm has been creditable to the new and enterprising management.

W. A. Carr & Co., rubber stamp manufacturers, of Peterborough, although a comparatively new firm, have already opened out a very creditable connection among the business public of Eastern Ontario. The facilities they have at their command for doing the very best work are equal to that possessed by much older houses. As young men of business push and integrety we would recommend them with confidence and any of our readers requiring anything in the line of rubber stamps would do well to send this firm their orders. Their card appears in another column.

In another column will be found the announcement of an important sale by public auction of pine timber limits, situated in the Keepawa territory, Upper Ottawa agency, in the province of Quebec. They are virgin limits, and the owners, Messrs. John Ross and Co., have had them explored. They are well timbered, and the pine is of the very best quality. Water is plenty, all the rivers and creeks being suitable for driving. The facilities for taking timber and logs made on limits in the Keepawa territory to Ottawa makes these limits much more valuable now than they would have been a few years ago. Doubtless the competition at the sale on the 3rd inst. will be keen.

There are some special lines of manufacturing in Montreal that have not only carried the fame of that city throughout North America, but over the entire civilized world. The specialities of Tees & Co. are the manufacture of railroad, bank and other desks, revolving book cases, wood carpet, paraquet and inlaid floors. In desks they make over 200 different varieties, most of which are covered by patents owned by this firm. They range through all styles and shapes of roll and cylinder, office, library and parlor desks. They are manufactured in all kinds of wood, chiefly in black walnut, ash, oak and cherry, also to order from satin, teek, maple, mahogany, and any of the fine imported woods. They were among the most prominent exhibitors at the Colonial and Indian Exhibition at London, England, not only securing first awards, but received orders from all parts of Great Britain, France and Germany, also from Ceylon, Canary Islands and other parts of the Eastern Hemisphere. In all departments of their trade they take the lead in Canada not only in character of work but in the reasonable prices at which their wares are offered.

RAILWAY MATTERS.

The Red River railway is now open for passenger traffic.

The cost of the C. P. R. to Westminster was: Railway bonus, $75,000; Right of way, $35,000; Land granted, $20,000; or a total cost to the city of $130,000 or $16,200 per mile.

An idea of the fast speed made by the London and North Western railway between London and Edinburgh will be maintained when it is borne in mind that at the same rate of speed the distance between Quebec and Vancouver would be covered in two days and a-half.

The Union Pacific embraces 6,354 miles of road in ten States and Territories, and by another year will reach 7,000 miles. The total funded debt at the end of 1887 was $147,590,011, which is a decrease of $8,257,416 since June 30, 1884. The aggregate earnings of 4,764 miles in 1887 reached $28,557,776. The net earnings per mile of the whole system were $2,355,72.

A project is on foot to build a line of railway from the coal fields on the Souris northward through Carlisle and Cannington, thence to Moosomin, crossing the C. P. R. continuing northwestward, crossing the line of the G. N. W. Central and the M. & N. W. railway, terminating in the Riding Mountains, where there are large quantities of timber which would make traffic for the road, which with the coal traffic would form alone a sufficient amount of business to make the line a paying investment. Mr. James Humphreys, of Cannington, a wealthy English gentleman, has left for England for the purpose of procuring financial backing there before forming a company.

A company has been formed by a number of the leading citizens of Victoria, B. C., with the object of building a railway from that city to a point at or near Shoal Harbor at the north end of the Saanich peninsula and connecting this point with the mainland at or near the mouth of the Fraser river by a ferry, thence carrying a branch to Westminster city and extending a line from the mouth of the Fraser to connect with the American system of railways at or near Mud Bay. It is expected by the promotors that a trip from Victoria to the mouth of the Fraser river by the proposed line will be made inside of three hours, reaching Westminster 15 minutes later. At the Fraser river it is proposed to extend a mole to deep water, where trains will connect with the ferry. It is understood that both the Dominion House of Commons and the Local Legislature will be applied to for power to enable the Company to carry out the work. The distance by rail from Victoria to Shoal Harbor will be 18 miles, the ferry line 25 miles, and 12 or 18 miles from the mole io Westminster.

EXCHANGE ECHOES.

Chicago Timberman.

It pays better to ship the goods manufactured than the raw material.

Canadian Trade Review.

A manufacturer who wants to succeed in business must make money not only in selling his goods but in buying his material.

New York Lumber Trade Journal.

We are sorry to see by a perusal of some of our contemporaries that the Association has a leaky member. Who he is we do not know, although we are likely to at no distant day, and if we ever do know, we shall print his name in large type at the head of our columns.

Winnipeg Commercial.

Canada has more miles of railway per capita than any country in the world, and in shipping she stands second among the countries of the world as to the number of tons per capita. Great Britain only excels Canada in the matter of shipping. In proportion to population, Canada may be said to lead the world in commercial enterprise.

American Exchange.

Contrary to the opinion expressed in some directions the great majority of lumber manufacturers are not in favor of free lumber. Occasionally there is an exception to the rule, and naturally enough this exception is much talked about in free trade journals. It will generally be found if a manufacturer argues for a removal of the tariff on Canadian Lumber he is interested in Canadian stumpage.

Southern Lumberman.

To the business man the advertising pages of a journal are as valuable and interesting as the reading ones, and the man who receives a trade journal and throws it in the waste-basket without at least glancing over it carefully, even if he does not read it attentively, is extremely unwise, not to put it stronger. Some of the best houses in the country subscribe for such journals for the advertising alone, in order to keep up to the state of the market and the changes of trade.

Chicago Timberman.

If those people who have gone into ecstacies over the fact that the big Joggins raft, which contained but 3,000,000 feet of logs could see some of the "Whalers" that are coming into Bay City at this time they would open their eyes still wider. A big Lake Superior raft, containing 6,000,000 feet arrived last Thursday night, and it is announced that the Reed Towing and Wrecking Company will bring in their patent boom one containing 8,000,000 feet about the middle of September. This is the kind of boom stick used at Muskegon.

Lumber Trade Journal.

Several Eastern lumbermen have contracted the "Cuba fever," which means that they have grown strong in the faith that investments in Cuban timber lands will result in large and speedy returns, the forests of the island being rich in mahogany and other valuable woods, easily accessible, and convenient to all the leading lumber marts of the world as regards cheap freights. The timber lands are [illegible] and are estimated at about 20,000 square miles [illegible] entire area being practically a [illegible] several years ago is reported to have [illegible] acres of forest lands which have enhanced [illegible] tion to $5,000,000. He has begun [illegible] an extensive scale; having at the present [illegible] 300 yoke of cattle engaged in logging. [illegible] island at the present time is estimated at about 13,000,000 acres and valued at $40,000,000, or only a trifle over $3 per acre.

ITEMS OF INTEREST.

The proverbial two blades of grass where one grew before could hardly be more profitable than two trees where there is now but one.

It is said that a fir is standing in the Kanich valley, Nevada, which measures fifty-eight feet in diameter seven feet from the ground.

In Germany a substitute for lignum vitæ in certain mechanical uses has been found by impregnating soft wood with oil and subjecting it to pressure to increase its density. Thus prepared, the artificial is said to have all the properties of good lignum vitæ.

An exchange tells that a lock of a girl's red hair was found deeply imbedded in a large tree by some men who were cutting timber, at Fredericksburg, O., the other day. It nestled inside 51 growths of the tree, showing that there was nothing youthful about the relic. This part of the story may do, but when it is said that the workmen immediately fell to work cutting down trees in the neighborhood, expecting to find a white horse imbedded in one of them, it is asking too much of the readers' credulity.

PERSONAL.

Mr. James Dollar, of Bracebridge, intends disposing of his mill and limits and going with his brother, J. M. Dollar, to California.

Mr. John Brennan, manager Ontario Lumber Company at French River has resigned, and is going to California.

It is reported that Mr. Angus McLeod, local manager for the Victoria Harbor Lumber Company at Bracebridge, has sent in his resignation.

Mr. G. B. Pattee, of the firm of Perley & Pattee, lumbermen, Ottawa has "struck it rich" in Arizona, being the owner of one of the richest silver mines in the territory. The ore taken from the mine pans out at $562 per ton.

We had the pleasure of a visit from Mr John W. Coy, vice-president and general manager of the St. Catherines Saw Works. By some misadvertance in last issue a mistake was made in his name, which the typo made "John A. Cox."

FIRE RECORD.

Bush fires have devastated East Tawas and other parts of Michigan.

A recent fire in a lumber yard at Victoria Harbor nearly caused a disastrous conflagration. As it was but little damage was done.

Cadenhead's shingle mill at Midland was burned on Friday morning, August 31st. The fire was supposed to be of incendiary origin.

In the upper Tenton county, Montana, disastrous fires have raged. Ranches were burned off for an area of sixty miles and the fire could not be kept under control.

On Wednesday morning, Sept. 11th, the steam sawmill, machinery and buildings adjoining situated at Hazely's Bay, near Pembroke, was burned to the ground. The mill was in operation about five years, The loss is about $10,000 partly insured.

The largest fire which ever occurred at Thessalon, Ont., took place about the middle of September, resulting in the entire destruction of N. Dyment's large steam sawmill. Fortunately a large stock of lumber and slabs occupying an adjacent lot were saved through the heroic efforts of the citizens. The total loss has not come to hand, but it will be heavy. It is not known whether Mr. Dyment will rebuild or not, but it is probable that he will.

A most disastrous fire has taken place at St. Jerome, a thriving little town in Terrebonne county, situated about thirty miles from Montreal. It broke out at one o'clock in the morning and before it was got under control the woollen mills of Beauchemon & Co., a sawmill and furniture factory belonging Ald. Villeneuve of Montreal, and Chapleau & Geldert's saw mill were entirely destroyed, together with contents. The loss is placed at $60,000. No fatalities are reported.

SAW-MILL REFUSE.

The safe disposal of saw-mill refuse is literally a burning question, and one which in many places is really a serious one, and involves the expenditure of large sums of money. After the sawdust has been burned under the boilers in steam mills, and all that can be cut up into laths thus disposed of, there still remains a large amount of material which in one way or another must be got rid of. In earlier times the common way was by open fires maintained at a presumably safe distance from the mill, and to which the refuse had to be conveyed, often at considerable expense.

In more recent times furnaces have been specially designed, into which, by the action of machinery, the refuse is constantly discharged as fast as produced in the mill. For a large mill the furnace must be very large, and is very costly. In one case in Ontario the burner is over thirty feet in diameter, and has a total height of over 120 feet. The lower part has suitable openings for air, and for entrance for repairs when necessary. It is really an iron casing, made of wrought iron plates, and lined with brick. This is about sixty feet high, and then tapers until it is about fourteen feet in diameter, and thus is continued another fifty feet, and is crowned with a spark arrester.

The refuse is carried up about fifty feet, and is there discharged by a suitably-shaped mouthpiece, so as to scatter the refuse over the bottom of the burner. The burner cost several thousands of dollars, and has been in use for several years with great success. The spark arresting frame is made of wrought iron piping with the ends open, so that the air circulates through it, and keeps it cool. This is covered with heavy wire netting, the meshes being about one-fourth inch square.

This kind of burner is only well adapted for large mills, as it must be of considerable height to insure safety, and the height necessitates a large diameter. The two things necessary in a successful burner are: First, the prevention of the escape of burning pieces or sparks of size sufficient to cause a fire, and secondly, some means by which the heat generated may be dissipated without injury to to the furnace itself, so that it might last for a reasonable time.

These ends can be attained by building a brick furnace covered in with an arch. The wall and arch should be double, with considerable space between, or have a number of flues in them. These flues should be open at the bottom, and be carried up higher than the crown of the arch, in the form of short chimneys. By this means the currents of air will carry off the heat. The flue from the furnace itself should be carried horizontally for some convenient distance, and if near water, it would be advantageous to carry it out over the water, so that any burning pieces carried by the draught might drop into the water, and thus be prevented from escaping by the chimneys.

The chimney should not be at the end of the flue, but at least four or five feet nearer the furnace. The entrance to the chimney should be as square and abrupt as possible. The object of this, while giving free vent to the escape of the smoke or heated air, anything more solid, such as pieces of burning wood, cannot turn the abrupt corner leading into the chimney but pass into the space beyond. Locomotives are now frequently constructed on this principle, having a smoke box extension beyond the smoke pipe, and into this sparks and grit from the furnace collect, instead of being driven out through the chimney, and scattering over the train, as used to be the case.

The chimney from the burner should be arranged to give ample draught, but by making the flue of same length, and by one or two bends in it, or bridge walls, the velocity of the current may be checked, and so prevent the chimney becoming too hot, and in this way an ordinary smoke-pipe may be used. Should it be necessary to put a spark arrester up, it will be found of great advantage to make the frame of it of pipe with ends all open, so that the air may freely pass through, and so prevent the iron from becoming too hot.

The bottom of the furnace may be made with several low parallel fire brick walls to take the place of grate-bars, and doors should be provided for getting in to repair or clean, either by having heavy iron frames built in, or a better way is to form openings into the brick wall with an arch top, and built up in such a manner that the openings can be made at any time without injury to the wall.

It seems a pity that so much material, which it has taken years to produce, should be wasted, as is often done in saw-mills, and yet what else to do with refuse than burn it, involves questions not easily solved.

CASUALTIES.

A boiler in a saw mill at Springfield, Ill., exploded Aug. 30th, killing three persons. William Gookum, the third victim, died the following Saturday.

A young man named Joseph Elliott met his death near Thessalon, Ont., a fortnight ago, while engaged on the drives.

A young man named Vannasse who was employed in Mr. Booth's mill at the Chaudiere, was at work near the circular saw when he accidently put his hand too near the saw and had two of his fingers cut off.

At Ste. Anne De Laperade, Que., Mr. Louis Barbeau, a farmer had just comme nced work in a saw mill, when he was struck by a piece of wood from the saw with such violence as to kill him.

A lad of 14 named Latowmier, engaged in Gilmour's mill, Trenton, was caught by the chain used for carrying the saw dust to the furnace and almost completely torn to pieces.

CORRESPONDENCE.

PRESCOTT, Sept 10th, 1888.

Editor Canada Lumberman.

DEAR SIR,—Is there a mill in the continent of America whose capacity is double that of the Gilmour mill at Trenton. An early reply will oblige.

Yours truly,
A. S. WHITING MFG. CO.

Will some of our readers undertake to answer this query and give particulars?—Ed. LUMBERMAN.

—Taking effect September 5th, the lumber freight rate from Chicago to East St. Louis, Ill., has been advanced from 8 to 10 cents, and, in harmony with this move, rates from Chicago to various Illinois points, the rates of which are governed by the East St. Louis rate, have been advanced from 1 to 2 cents. Rates to these latter points have also been similarly adjusted with reference to points affected by the Chicago rate.

—Forest fires are reported in old cuttings in Northern Michigan and Wisconsin but we can learn of no damage as yet in standing pine. Apprehensions have been felt for the safety of a large jam of logs consisting of 100,000,000 feet or more in the upper limits of the Menominee boom, which are high and dry, with fire in the surrounding marshes, but as yet no damage is reported. Great complaint is made at the carelessness of railroad surveying parties traversing the Northern country, and whose camp fires are left to work havoc.

AUCTION SALE
—OF—
VALUABLE PINE TIMBER LIMITS.

The undersigned has received instructions from MESSRS. J. BELL FORSYTH & CO., of Quebec, to Sell by Public Auction, at the RUSSELL HOUSE, OTTAWA,

On Wednesday, Oct. 3rd., 1888,

Three Hundred Miles of Valuable Pine Timber Limits, situated on the Upper Ottawa River. These limits were selected by J. Bell Forsyth & Co. about fifteen years ago, and have never yet been worked. Terms and conditions made known on day of sale.

Plan of the limits can be seen and further information obtained on application to the owners, or

I. B. TACKABERRY,
Auctioneer.
29 Sparks St., Ottawa.

Valuable Pine Timber Limits
FOR SALE BY AUCTION.

The following valuable Pine Timber Limits situated in the Keepawa Territory, Province of Quebec, will be sold by Public Auction at the Russell House in the City of Ottawa, at 2.30 p.m., Wednesday the third day of October, 1888.

Berth No. 176,	50 sq. mls.	Berth No. 185,	30 sq. mls.
" 177,	50 "	" 186,	"
" 178,	50 "	" 187,	30 "
" 179,	50 "	" 188,	"
" 180,	50 "	" 189,	"
" 181,	50 "	" 190,	"
" 182,	30 "	" 191,	"
" 183,	"	" 192,	"
" 184,	30 "	" 193,	"

Total area 720 square miles more or less As per licenses of 1887-88.

These Limits have never been worked on, are well timbered, and the pine is of the very best quality.

Terms and conditions made known on day of sale.

Plan of the Limits can be seen and further information obtained on application to

JOHN ROSS & Co., Quebec.
or I. B. TACKABERRY, Auctioneer,

IMPORTANT TO LUMBERMEN.

IN RE ESTATE OF
Brown & Mahood, of Utterson, Ont.

Tenders are invited for the Assets of this Estate, consisting in part of about

20 Million Feet of Standing Pine; Logs Floating in Mary's and Long's Lakes, valued at about $10,000; Shingle Mill at Port Sydney in Operation; Lumbering Utensils in Large Variety; Freehold Land and Village Property; Stock in General Store at Utterson.

Tenders will be received up to the 15TH of OCTOBER NEXT for the whole interest of the undersigned in the estate, or any part thereof.

Full particulars as to the location of the timber, etc., etc., can be had on application to

ROBERT H. GRAY,
Trustee.
24 and 26 Wellington St. West, Toronto.

Notice to Iron Bridge Builders.

Sealed Tenders, addressed to the undersigned and endorsed "Tender for Chaudiere Bridge," will be received at this office until Friday, the 5th day of October next, for replacing the present roadway of the Suspension Bridge across the Ottawa, at the City of Ottawa, with an Iron Truss Bridge, in accordance with a specification incorporated in and forming part of a form of tender, a copy of which, together with a plan of the present structure, will be supplied to Iron Bridge Builders only, on application to the Chief Engineer.

Tenders must be accompanied by plans, specification and strain sheets of the structure proposed to be constructed, and also a description in detail of the mode or manner in which it is to be erected and put in place, as no interference with the present bridge or the traffic across the same will be permitted, except as stated in the specification; and they—the tenders—will not be considered unless made on the forms supplied, and signed with the actual signatures of the tenderers.

An accepted bank cheque, payable to the order of the Minister of Public Works, equal to *five per cent of amount of tender* must accompany each tender. This cheque will be forfeited if the party decline the contract, or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order.
A. GOBEIL,
Secretary.
Department of Public Works, Ottawa, 10th Sept., 1888.

Sealed Tenders, addressed to the undersigned and endorsed "Tender for Port Arthur Work," will be received at this office until Friday, 19th October next, for the construction of a further length of Breakwater at Port Arthur, Ontario, in accordance with plans and a specification to be seen at the Department of Public Works, Ottawa, and on application to William Murdoch, Esq., Resident Engineer, Port Arthur.

Tenders will not be considered unless made on the form supplied and signed with the actual signatures of tenderers.

An accepted bank cheque, payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This check will be forfeited if the party decline the contract, or fail to complete the work contracted for, and will be returned in case of non acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.
Department of Public Works,
Ottawa, 17th Sept., 1888.

J. J. TURNER,
Sail, Tent and Awning Maker,
251 GEORGE AND 154 KING STREETS.
PETERBOROUGH.
Canoe, Yacht and Boat Sails made to order.
Perfect Fits guaranteed.
Every description of Lumbermen's Supplies and Waterproof Clothing.

Sealed Tenders, addressed to the undersigned and endorsed "Tender for Penetanguishene Work," will be received at this office until Friday, 19th October next, for the construction of work at Penetanguishene, Ontario, in accordance with a plan and specification to be seen at the Department of Public Works, Ottawa, and on application to H. H. Thompson, Esq., Mayor of Penetanguishene.

Tenders will not be considered unless made on the form supplied and signed with the actual signatures of tenderers.

An accepted bank cheque, payable to the order of the Minister of Public Works, equal to *five per cent of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract, or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.
Department of Public Works,
Ottawa, 13th Sept., 1888.

MACHINERY FOR SALE

H. W. PETRIE'S list of Sawmills and general wood-working machinery for sale.
ONE new 2 or 3 block sawmill, with 6-inch saw.
ONE sawmill, with timber limit in Parry Sound.
ONE 2-block mill. Butterfield build.
ONE 2-block mill, small portable size.
ONE automatic sawing machine, Bavley make.
ONE 66-inch inserted and 64-inch solid saws.
TWO stave cutters with parts-61.
ONE gang lath mill, new.
ONE Waterous self-feed grist mill and bolter.
ONE Goldie & McCulloch Hall self-acting shingle machine.
ONE self-acting shingle machine, Green Bros. make.
ONE Waterous self-acting shingle mill and jointer.
ONE Eureka self-acting shingle machine and jointer, I. Frenchette, maker, St. Hyacinthe, P. Q.
TWO Doherty hand swing machines.
ONE upright swing, with 40-inch saw.
EIGHT wheel jointers, various makers.
THREE drag saw machines.
ONE heavy 24-inch planer and matcher, Rogers' make.
ONE new eclipse planer, matcher and moulder, Galt make.
ONE 24-inch planer and matcher. Picton make.
TWENTY-inch planer and matcher.
EIGHTEEN-inch planer and matcher.
LITTLE Giant pony planer and matcher.
NEW Economist 24-inch planer and matcher.
ONE 27-inch revolving bed double surfacer, Galt make.
ONE 24-inch surfacer, McKechnie & Bertram.
ONE 24-inch poney planer, Frank & Co. build.
ONE 20-inch poney planer, Frank & Co. build.
TWENTY-four-inch surfacer, Kennedy's make.
TWENTY-four-inch surfacer, hardwood bed.
TWENTY-two-inch surfacer, wood bed.
EIGHTEEN-inch surfacer, all iron and steel.
SIXTEEN-inch buzz planer, Galt make.
THREE-side moulder, all brass heads, Rogers' make.
THREE-side moulder No. 2, Cant, Gourlay make.
TWO one-side moulders, McKechnie & Bertram make.
ONE one-side moulder, wood frame.
NEW 3-side moulder, Cant Bros, make, Galt.
TENONING machine, double cope, Goldie & McCulloch.
ONE J. A. Fay tenoner, small size.
TWO Ross tenoners.
ONE double cope tenoner, McKechnie & Bertram.
BLIND slat tenoner, Cowan build.
POWER mortiser, Goldie & McCulloch make.
TWO power mortisers for heavy work.
LARGE stock of foot mortisers, new at $15 each.
UPRIGHT boring machine with column.
SIX power scroll saws, various makes.
ONE 34-inch band saw, Hamilton Tool Co.
TWO new band saws, Galt make.
NEW 34-inch pedestal and 24-inch bracket band saws.
ONE upright Goldie & McCullock shaper.
NEW iron Top shaper, Cowan make.
SHAPER. heavy iron column, Cant Bros. make, Galt.
ONE wood frame shaper and counter shaft.
ONE velocipede foot power shaper, Hornes.
ONE automatic handle lathe, Sheldon Bros.
ONE handle or gauge lathe. Bailey.
ONE axe handle or spoke lathe, new.
ONE Blanchard spoke lathe, Fay make.
ONE broom handle lathe, wood frame.
NEW wood splitting machine. Send for photo.
BOBBIN lathe with cutters for cotton and woollen mills.
SET of hoop machines, Goderich make.
SET match machinery for round matches.
LOT of lumber and log cars for sawmill use.
FOUR pole road cars, 7 feet, 10 inches gauge.
SANDPAPERER, new Galt make.
FOOT mitering machine, Cant Bros. make.
SIX saw benches, cut off and ripping.
TWO new wood turning lathes with rests, &c.
LOT of moulding and matcher cutter heads.
ONE iron bowl machine, American make.
ONE choir mortising and boring machine.
ONE set spoke machines, Fay make, Cincinnati.
ONE knife grinder, Galt make.
ONE hand wiring machine.
ONE beading and moulding attachment for planer and matcher.

SEND for lists 13 and 14, and mention wants. Address H. W. PETRIE, Brantford, and No. 9 York street, Toronto, opposite Union Station.

THE MONARCH BOILER
(PATENTED) **AND HERCULES ENGINE.**

Guaranteed to Saw Lumber Perfectly Smooth and Even in thickness.

Portable from 6 to 70 horse power. Surpass portable steam power heretofore produced for strength, durability, compactness, and the ease with which they can be moved.

The 70 horse power can be taken over the roughest roads, or into the forest, and set up as easily and quickly as an ordinary 20 horse power portable engine, and as firm as a brick-set stationary engine. Engines and boilers of every size and description. Rotary Saw Mills, Shingle and Lath machines, Law Grinders, Planers, etc. Mill machinery and supplies of every description. Every boiler insured against explosion by the Boiler Insurance & Inspection Co. of Canada. Write for circulars.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*"Civil Service Gazette."*

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

CONDITIONS OF SALE.

The above timber limits at their estimated area, more or less, to be offered at an upset price to be made known on the day of sale.

The timber limits to be adjudged to the party bidding the highest amount of bonus.

The bonus and first year's ground rent per square mile, to be paid in each case immediately after the sale.

These timber locations to be subject to the provisions of all timber regulations now in force and which may be enacted hereafter.

Plans of these timber locations will be open for inspection, in the Department of Crown Lands, in this city, and at the offices of the local Agents, up to the day of sale.

E. F. TACHE,
Assistant commissioner
of Crown Lands.

N.B.—According to law, no newspaper other than those named by Order in Council, are authorized to publish this notice.

WANTED AND FOR SALE.

Announcements in this department will be inserted at the uniform rate of ten cents per line, each insertion, payable in advance. For three or more consecutive insertions of the same advertisement a discount of 25 per cent. will be allowed. Eight words should be counted as one line.

"THE LEADER"

CROSS-CUT SAW,

Manufactured only by

R. H. SMITH Co. LTD.,

ST. CATHARINES, ONTARIO.

A Gauge is furnished with each Saw to regulate the Clearing Teeth.

Full directions for Setting and Filing are etched on every Saw.

The above Saws are made from the best Double Refined Silver Steel, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the front of the teeth to the back.

They are tempered by the Simonds Patent Process, insuring a perfect uniform temper throughout the plate, and stand without a rival as the best, fastest and easiest-cutting Saw known. *For Sale by the Trade generally.*

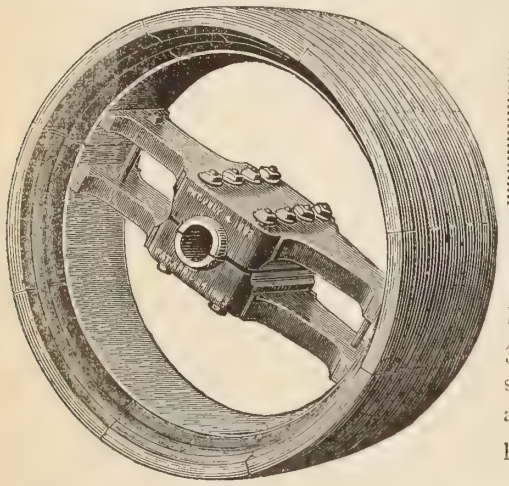
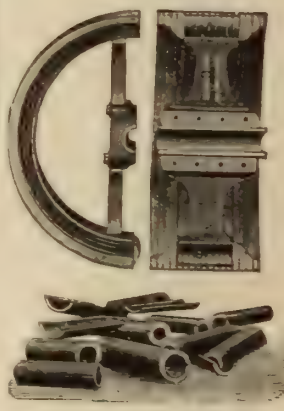
Saw Gummers, Leather Belting, Files, &c.

DODGE PATENT WOOD SEPARABLE OR SPLIT PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

The Dodge Wood Split Pulley Co., 89 Adelaide St. W., Toronto.

THE CANADA LUMBERMAN.

VOLUME VIII. NUMBER 11. PETERBOROUGH, ONT., NOVEMBER, 1888. TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CENTS.

THE CANADA LUMBERMAN

PUBLISHED MONTHLY BY

ARTHUR G. MORTIMER,

OFFICE: SIMCOE STREET, PETERBOROUGH, ONTARIO.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market but, also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade or specially interested in it, who should not be on our list thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE ocean rates to Europe have been considerably raised this season. Not only has this been the case, but vessels have been scarce at Quebec. Shipments being thus restricted, and there being little convenience for storing either at Quebec or Montreal, the yards at the Canadian capital have become crowded, they being also of limited capacity. This has necessarily caused considerable inconvenience to the firms that have made a feature of this branch of the trade.

ACCORDING to a London paper there seems a probability of Russia dealing largely with Canada in the lumber trade. Certain merchants of Batoum have, it is said, asked one of the largest firms in Ottawa for quotations for the shipment to the Black Sea of several million feet of pine annually. It certainly seems surprising that such a demand should be made on Canada from a country like Russia which has possessed such forest wealth, but if the report be true Canadian lumbermen will receive the news with much favor.

A DEMOCRATIC government official, an American paper says, is reported to have gone to Ontario to investigate the effect which the passage of the Mills bill would have upon lumber and timber prices in Canada, and to have come out strongly against the bill. He lately labored in the house to explain the situation. He was convinced that the expected passage of the bill had boomed timber limits immensely, and quoted a newspaper statement that R. Hurdman & Co., Ottawa, had given an option to the E. B. Eddy Manufacturing Company of their Magnissippi limits at $325,000, which would be a profit of $75,000 for holding them three years. A refusal was given for six weeks to allow for the passage of the bill. If it did not pass, then the limits, inferentially, would not be desired. Other opinion had been offered at largely advanced prices, in anticipation of a great benefit, leading to the conclusion that the free lumber clause would not cheapen lumber to the consumer, as the advocates of the measure supposed.

A CASE affecting large interests and involving most of the law as to building dams and running logs on rivers, is now pending in the provincial courts of New Brunswick. Log owners claim that the annoying log jams that occur on the St. Croix river at Milltown are occasioned by the defective passageway in the cotton mill dam. The cotton mill owners on the other hand claim that the lumbermen should keep the log roll clear, and they have obtained a temporary injunction against a lumber firm, restraining them from allowing logs to remain on their lands. The decision of the court will begin upon the motion to dissolve the injunction, and will be of interest to lumbermen generally.

WE learn that the McArthur Bros. Co., of Toronto and Quebec in Canada, and East Saginaw, Mich., will handle 3,000,000 cubic feet of square timber for the European markets this season. The work of handling square timber is confined to comparatively few operators whose work is spread over the entire country. Timber of this kind is by no means plentiful and is usually found in small groups. As a result operators are placed at a great inconvenience and have to extend their operations in every direction. While the timber business of Canada is mainly carried on in the province of Quebec there is nevertheless a considerable business springing up in Ontario. Messrs. Flatt & Bradley, of Hamilton, and Mr. J.M. Irwin, of Peterborough, are among those whose interests are closely identified with the square timber business.

THE perennial boundary dispute between the Government of the Dominion and the provincial government of Ontario crops up this time in relation to what is known as "the White Fish Lake Indian Reserve," in the District of Algoma, the advocates of the provincial view claiming that the Dominion Government has located an Indian Reserve around choice timber tracts and then sold the timber at private sale to its favorites. The provincial Government has brought an action against the Dominion licensees, and the case is now pending in the Chancery Court at Toronto. An interesting feature of this case has been the examination of a band of Indians as to the terms of their original treaty with the government, and in giving their evidence they are said to have evinced remarkable intelligence.

IF the Ottawa district is to be taken as a criterion there is every prospect of a large cut the coming winter. In the space of 30 days it is estimated that 2,000 men were sent into the woods from the capital alone. From various quarters there come reports of extended operations. Though the results may be satisfactory it would be well to observe a conservative policy. Every year the limits increase in value, as many recent transfers have showed in the most practical manner, namely, the handing over of hard cash or its equivalent. This rise in values is steady, not at all of the nature of a "boom," and is almost certain to continue. Under such circumstances it would seem more judicious not to force property, always enhancing, into the market with too great eagerness either in the shape of standing timber or the manufactured article. Those who are able and willing to hold back somewhat will probably find that they have been the gainers by not going ahead too eagerly. Prices are likely to be satisfactory enough to repay operators, but not to warrant an exaggerated scale in the face of a continually increasing value.

AMERICANS seem to take it as a foregone conclusion that should the tariff on Canadian lumber be removed through the passage of the Mills bill, that the Canadian export duty of a like amount would be immediately taken off. Would it not be just as well for the advocates of free lumber to learn a little more concerning the views of the Canadian government on this question before making up their minds fully on the subject? We do not apprehend any serious opposition to such a step being taken, but as it is always wise to look before one leaps. A canvass of Canadian sentiment, would not be out of place. There is always two sides to a question, and in this case we find those who strongly endorse a free exchange of the products of the forest, from a pecuniary point of view, of course; while there are also those—and the number is large—who look not only to the present put also to the future and realize the oft-repeated fact that free lumber into the United States means nothing less than the utter annihilation of our forest wealth for all time to come. The question is a serious one and demands thoughtful consideration.

INDICATIONS point to a somewhat diminished cut the coming winter, especially throughout the Western States. Every effort is being made by the larger operators to push their work forward as expeditiously as possible so as to avoid the inconveniences caused by heavy snow falls and other drawbacks. That the stock of standing timber is fast diminishing is patent to every one who takes any interest in the subject, and it is therefore not surprising that the output of lumber throughout many States in the Union will diminish from year to year. In the face of such an outlook operators in the Northern States are looking to the Southern States and Canada as the only available source of supply. During the past year or two a large amount of American capital has found investment in Canadian stumpage and new mills are being pushed forward rapidly. While we have as yet abundance of timber left for our own uses, nothing is more evident but that in a few years if the present extensive operations be continued, our forests will be remembered only as things of the past. But how to avert this inevitable result is a question that but few if any can answer.

ONE who is considered as an authority on the subject makes the statement that the Southern States contains an area of 239,837,611 acres of land, of which 50.3 per cent. is covered with valuable timber. Of this there is of pine alone 250,000,000,000 feet of merchantable timber. Every lumberman knows that a million feet makes a big pile. Just imagine 250,000 piles of lumber with a million feet in each pile! Well this is the amount of pine timber, we are told, yet standing in the South. And this is only one item of the timber resources of that much-wooded country. The amount of hard woods will greatly exceed in quantity and value that of pine. Eight years ago there were 6,481 saw and planing mills and woodworking establishments in the South, employing 42,873 hands, and turning out products to the value of $48,319,963. According to the last count, there are now 11,242 establishments, employing 89,040 hands, and turning out products to the value of $91,980,960. One thing is certain and that is that the Southern States are booming, and it is not surprising that while many Western lumbermen are looking towards Canada for their future supplies, a much larger percentage have turned their faces Southward with good chances for increased fortune.

THE fight between the Toronto wholesale dealers and the Grand Trunk railway, relative to the rules regulating the handling of lumber freight, is waxing warmer. A month or two ago THE LUMBERMAN took occasion to express itself on freight rates and the injustice which is being done the trade in the way of over-charges. What the lumbermen want is either a rate based on so much per thousand feet, or an honest and impartial system of weighing. Their contention that they have no right to pay for more than they receive is worthy the consideration of even such a monopoly as the G.T.R. The practice of charging for 30,000 lbs. on every car whether it contains that amount or not is an injustice which should not be tolerated. The suggestion previously made in these columns that weigh scales be erected by the railway companies at all important shipping points has apparently been well received. If this was done the increased weight—caused by snow and rain—always added to a car of lumber in transit would not be charged up as lumber but would have to be met by the railway companies themselves. At the present time when cars are at a premium and locomotive power scarce, the movement of lumber is very slow, and as a result the difference in weight at the point of destination compared with the point of shipment means an important item, if such additional weight has to be paid by the consignee. The demands made by the lumbermen are only just, and considering the importance to the railways of the great industry they

represent, a refusal to meet their wishes in this particular, can only be taken as an evidence of unblushing selfishness, and a lordly intimation that the Grand Trunk Railway Co. rule the roost. and go elsewhere if you can.

COMMENCING with the present number we begin the publication of a series of practical articles from the pen of Mr. Anson A. Gard, a gentleman well known as a member of one of New York's largest lumber firms. Mr. Gard has passed through all the different stages of a lumberman, from wielding the axe in the forests of Ohio, up through the sawing of the lumber to its disposal, and therefore can claim a practical rather than a theoretical knowledge. The information contained in the article in the present issue of THE LUMBERMAN on "Walnut Logs and How to Prepare Them," will well repay the time taken up in its perusal, while the tables will serve as a permanent help to all loggers. The second article, which will appear in our next issue will be on the subject of Hardwood lumber and its manufacture.

MR. FLEMING has finished his examination of the Ottawa river in connection with the sawdust difficulty, but it is understood that the report will not be made public for some time to come. The investigation, it is said, will go to show that the sawdust is not injuring the river to the extent that has been stated. The intention is to lay the matter before the Government at its next session with a view to counteracting the effect of statements made before the Senate committee last session. The lumbermen say that should the Government undertake to deprive them of their exemptions under which they carry on their business at the Chaudiere, all the inducements they now possess for remaining in Ottawa will be removed. The lumbermen are evidently serious in their threat of withdrawing from Ottawa if the government should restrain them from throwing the sawdust into the river. The proposal to the government to compel mill owners to erect burners and burn all their sawdust has raised not only the mill owners but the whole city in arms against the suggestion, as they find that insurance rates will be raised from 50 to 100 per cent, according to locality, in all parts of the city, if the erection of burners is insisted upon.

MR. EDWARD JACK, a writer on subjects relating to the timber and lumber business, in a letter to an American exchange, charges that for years the Quebec government has been constantly and systematically defrauded in the matter of stumpage dues by the under-estimation of the quantity of timber cut on the various leases held by individuals under the government. The government of the province, this writer says, is about granting the sum of $24,000 this year, in order to give effect to the modifications which they have made in the tariff of ground rents and timber dues, and which are going to produce a considerable increase in the revenues from woods and forests. In the course of a speech delivered in the Quebec legislature last session the crown lands commissioner stated that the investigations ordered by the government showed that the old system of accepting the declarations of the lumber merchants and their employees had led to the perpetration of fraud to the prejudice of the provincial revenue; that enormous quantities of timber cut on crown lands had paid no dues to the government, and that in certain sections of the province the pillaging of the crown forests has been systematically carried on without hindrance in any way from the officers of the department employed for the purpose. The new regulations have been framed to prevent these frauds in future.

THE LUMBERMAN is again called upon to report another heavy failure among the Toronto wholesale lumber trade. The firm who in this case have been compelled to succomb to the pressure of hard times is that of Manhard & Co. who are well known to the trade of both Canada and the United States, although they have only been located in Toronto but a few months, having moved to that city from the town of Brockville. At a recent meeting of the creditors of the insolvent firm a statement of their affairs was submitted, showing their liabilities to be $53,000 and the assets purely nominal. A few unsecured creditors, whose accounts were incurred since the retirement of Mr. Doodridge, of Brockville, from Manhard & Co., and who have not Mr. Doodridge's name on their paper, made a request that he (Doodridge) should assign and join hands with the insolvent firm. This it is understood Mr. Doodridge refused to do. It was stated at the meeting that the nominal assets consisted of furniture and book debts, all of which amounted to less than $10,000. It was further reported that $26,000 of the liabilities were preferred and secured creditors. Everything went to show that the unsecured creditors' prospects were gloomy in the extreme. The meeting adjourned without arriving at any definite decision.

THERE are five saw mills between the summit of the Rocky Mountains and Revelstoke, B. C., a distance of 150 miles. The mill men complain that they are unable to run their mills to advantage, owing to the excessive freight rates charged on the C. P. R. The rate is $135 per car to points east of Regina, which is about the same rate as is given the coast mills, though the haul in the latter case is much longer. West of Regina the country is not largely settled, and there is not much demand for lumber. In time as the western part of the territories gets settled up, the mountain mill men will have a good market for their lumber closer to their mill, but in the meantime the timber is undergoing great destruction every year from forest fires. The railway company has lately made a reduction in rates from the mountain mills to Calgary, but this will not greatly improve the position of the mill men.

TWO interesting test cases will be argued before Judge Burbridge of the Exchequer court shortly concerning the importation of lumber into Canada. For some years past Messrs. McGome & Co., Toronto, and Messrs. Hazelton & Co., who have had contracts for constructing cars for the Canadian Pacific and Grand Trunk railways, have been importing into Canada quantities of manufactured oak lumber to be used in the construction of railway cars. This material it appears, has been invoiced as rough lumber and has been allowed to enter the Canadian Customs free of duty. The Customs department now contend that the lumber in question should have been entered as manufactured lumber on which a duty of 20 per cent. is chargeable, and they have accordingly entered actions against both of the above firms for an amount covering the duty chargeable on all the lumber entered by the firms in the past. The importations are spread over a period of several years, and the amounts involved are upwards of half a million dollars. The defendants claim that they can put in a strong defence. This case will be watched with the greatest interest, especially by importers.

FROM almost every lumber district in Canada we learn of unusually large numbers of men being sent to the woods. Such information furnishes a foresight into the probable cut for next year, which is evidently intended to be very large. It is evident that with each succeeding year the lumber cut is being largely augmented. Whether or not this wholesale slaughter of our forests is brought about by a clamorous spirit for hasty wealth or a fear of another increase in stumpage is a question of which those most directly interested are better capable of answering. This apprehension on the part of the lumbermen is certainly well founded, as when the last increase was put into force an effort was made to induce the Provincial Government to engage that a further increase would not be made for a specified number of years. This request, though a very reasonable one, was refused, and as a result lumbermen holding limits are inclined to make the most of their opportunities by cutting the timber as rapidly as possible. Although a lumber scribe but seldom drops into poetry a four-line stanza may briefly depict the situation.

O, woodman, cut that tree.
Leave not a single bough,
It will put five dollars in my inside pocket
Then why not cut it now.

HOW to keep a lumber camp free from noxious insects, says the *Timberman*, is a matter of vital importance to the welfare of the men and their value in the hard labor required from them. If the men's rest is broken in upon, their work is rendered just so much the poorer. It is therefore a question of dollars and cents to the owner of a camp, that is to be kept free from fleas, bugs and lice. When these pests take possession of a bunk camp, it is almost impossible to get rid of them, and a word or two relative to the building of the sleeping arrangements for the men will not be out of place. It will pay to provide cedar boards with which to build the bunks. No vermin can stand cedar. In the bottom of each bunk, cedar boughs should be spread and oil of cedar plentifully sprinkled upon the bed clothes. This is far superior to all insect powder, and if occasionally renewed and applied will keep the bunk camp clean. Remember, that the sounder the rest obtained by the men the better they can labor, and these little non-essentials when attended to, will keep your men in a fit condition to give you a full return for the wages you pay them. This they cannot do, however willing, if their rest is broken. Now see that your foreman attends to this, and you will find the hints here given will be money in your pockets.

THE threatened retaliation would considerably interfere with the business of some in the trade who would have to seek fresh means of reaching their market. At present however there seems to be no great haste at Washington to take any decisive step, so there is no certainty whether the threat will be carried out or not. A subsidiary branch of the discussion that has arisen between the two countries is as to reciprocal equal use of their respective canals. It is [illegible] that the free use by Canadians of the canals in the United States, notably in the State of New York, has not been permitted, and this having been pointed out as a contravention of the Treaty of Washington there is a possibility of the equal use being accorded if some amicable settlement should be arrived at. The forwarding of lumber by canal without transhipment would be very convenient for some Canadian lumbermen and would increase their profits. This, however, is another uncertainty. Most uncertain however is the [illegible] question. It would be hard to guess who may be President, and even then the tariff policy that may be adopted by either party in case of success is by no means certain. That and several other questions of moment are postponed, that is their settlement, not their [illegible] the Presidential election, with all its excitement, is over. That day is not far distant now.

MR. HOTCHKISS, the United States consul at Ottawa, as was mentioned in our last issue, has supplied a very elaborate report to the State Department at Washington of the Canadian lumber industry. His chief object appears to be to consider what would be the effect of the remission of the $2 per thousand duty on Canadian lumber imported into the United States. He comes very decidedly to the conclusion that the change would not have the effect desired by the advocates of cheapening lumber to the consumer. So far, he argues, the import of Canadian lumber has had no influence in lowering the price at other points, the quantity being too small in proportion to the total supply. He calculates, apparently with considerable care, that the increased import would not be sufficient to change this position. To his mind the importance of the influence of imports of lumber into the United States and the quantity of pine available has been over estimated. According to his view the figures show that if all the lumber sent into the United States from Canada was placed in the Chicago market it would supply but one-quarter of the requirements of that market alone and but one-half of the quantity handled by either Tonawanda or Buffalo. This quantity, even allowing for any probable increase, would be, he holds, too insignificant to fix the price. This, he says, is made by the United States manufacturer, and in so doing he is not influenced by the Canadian supply in any degree. If the duty of $2 were removed it would not affect the price in the United States, because it has never been a factor and would still be the same, no lower price would prevail in the United States than before and no different net results would be experienced by the manufacturers. The Canadians, he thinks, on the other hand would lay down their lumber in the United States cheaper by $2 less per thousand and would obtain for it the same as the United States manufacturer, so the result would be a clear gain to them of the $2 a thousand thus remitted. He does not think that the Canadian lumbermen would long retain this advantage. He explains at length the system of dealing in limits in Canada and dwells especially on the power the Provincial Governments have of augmenting the rentals and dues, notwithstancing the recent increases. The conclusion he draws is that not a May pay day would elapse before a further increase in the dues by order-in-council would be arranged to be sufficient to absorb the $2 per thousand into the Provincial treasuries. Thus, according to Mr. Hotchkiss, it is neither the United States consumers nor the Canadian lumbermen who would get the benefit of the $2 remission but the Provincial Governments. As to another important question he asserts that free lumber implies free logs. He thinks however that only a few mill owners on Lakes Huron and Michigan who have exhausted their supply of logs would avail themselves of this by rafting across the lakes, believing that in most cases the mills would be transferred to a location near the timber in preference. Not only, in his opinion, would this be more economical, but it would give them a better chance of supplying the English market, which draws and would probably continue to draw, chiefly from Canada, and he gives figures showing the importance of this trade. Consul Hotchkiss seems to be very positive in his views as to the effect of the remission of the duty, but it is certain that he would not find everyone agree with his opinions. We notice that Mr. Blaine, in delivering addresses in regard to the Presidential election in several lumbering centres in Maine, when dwelling on the tariff question assumed positively that the free importation of Canadian lumber would reduce the price by the amount of the duty, which would thus not benefit the Canadian lumbermen but the United States consumers, while the United States lumbermen would also have to accept the lower price. This was not only the view of Mr. Blaine but it seemed also to be the opinion of the interested audiences whom he was addressing. There was also a manifestation of the same difference of opinion on this point in the debates in Congress on the Mills Tariff Bill.

THE NEWS.

ONTARIO.

—The Ottawa river has been exceedingly low but is now rising slowly.

—Timoth Nester & Co., will put in 50,000,000 feet of logs on the Thessalon river, this winter.

—It is feared that owing to the low water in the Severn River many of the mills will have to shut down.

—The Georgian Bay Lumber Co., of Waubaushene, have already sent nearly one thousand men to the woods.

—Owing to the plentiful supply of men for the shanties this fall wages have taken a drop during the past month.

—W. R. Thistle & Co., Pembroke, have put in a large steam pump in connection with their large saw mill there.

—Band saws 60 feet in length have taken the places of circulars in Edwards & Co.'s large saw mills at Rockland.

—Mr. Wm. Orr, of Shelburne, is calling for tenders for a new saw mill to be erected on the site of the mill recently destroyed by fire.

—It is said that throughout the Georgian Bay district the ensuing season is destined to witness exceptional activity in the lumber shanties.

—Some of the mills at Ottawa have been shut down for several days at a time lately for want of logs. An unfavorable wind has been keeping the drives back.

—There are rumors of further large purchases of pine in the Spanish river region of the Georgian bay country, by Americans who have already invested there.

—In the case of George Caswell, accused of appropriating saw logs owned by the Georgian Bay Lumber Co., of Waubaushene, the grand jury at the late assizes found no bill.

—The Superior Lumber Co., of Ashland, Wis., has sold 1,000,000 feet of green lumber to a Port Arthur firm for immediate shipment to be used in the construction of a large elevator.

—The 1,500,000 feet of green elevator lumber to go to Port Arthur, Ont., from the Superior Lumber Company's mills, Ashland, Wis., will be conveyed on scows taking 400,000 feet at a trip.

—Klock Bros., of Klock's Mills, upper Ottawa, Ont., have bought 88 square miles of timber limits on the Veuve river, Ont., from J. G. Ross, Quebec, for $20,000, and will operate there this season.

—Two hundred and thirty-five car loads of lumber was shipped over the Canada Atlantic railway from Ottawa during a period of one week in October. Its destination was New York and Burlington.

—J. E. Bunswell, of Grand Haven, Mich., is interested in lumbering on the Spanish river. His firm has a yard on the Canada side at Sault Ste. Marie, Mich., and has just purchased additional water front.

—It is reported that a crew was lately taken from Alpena, Mich., to the Georgian Bay regions of Canada, to work in the woods, whereas in past years Canadians have been employed by lumbermen on the American side of the line.

—The saw mill owners at Norman, Keewatin and Rat Portage are reported as doing a large shipping business this season. They are all from 60 to 100 cars behind their orders, and in some cases they complain of being unable to get sufficient cars to fill their orders.

—The Rainy Lake Lumber Company, which has been in the hands of the Bank of Montreal for some years, has been purchased by a company know as the Western Lumber Company with headquarters at Rat Portage. The president of this company is Mr. John A. McRae, formerly of Ross & McRae, large railway contractors of Quebec.

—Mr. Frank R. Weston, of French River, writes THE LUMBERMAN that he is about through with the work of superintending the manufacture and shipment of the five millions of lumber purchased from the Ontario Lumber Co. by Messrs. Shaw, of Forest, and Fraser, of Amherstburg. It has turned out a well manufactured and satisfactory lot. The mills at French River expect to shut down about Nov. 10th. The Ontario Lumber Co. will have cut about $8,000,000 and McLean Bros. about 3,000,000 feet.

—One of the government surveyors who recently returned from the Ludbury district reports that lumber operations are being actively pushed in the northwestern section of that country. Francis Bros. have begun operations on their limits on the White Fish Indian reserve, and the Emery Lumber Company is getting a large quantity of timber on its Spanish river limits. It is understood that the Ontario government will shortly place a number of valuable timber limits, in the Ludbury district, on the market.

—That valuable milling property belonging to the estate of Hamilton Bros. at Hawkesbury, has been purchased by a wealthy syndicate, composed of Hiram Robinson, W. R. Thistle, H. K. Eagan and Robert Blackburn. They have purchased the entire plant, as well as a supply of about 150,000 ft. of logs. The new firm has already 250 men in the woods.

—E. D. Davidson & Son have shut down their lumber mills on Lahave River, throwing 300 or 400 men out of work. Cook & Co. have also shut down, throwing out of work another large number of men, and other lumbermen are preparing to do likewise. This action is on account of the enforcement of the law preventing saw dust from being dropped from the mills into the river.

—Lumber operations during the coming winter on the Ottawa promise to be the most extensive for several years. Reports from the Mattawan state that already 7,000 shantymen have passed through that place on their way to the Upper Ottawa districts. The men are compelled to walk several miles this year owing to the destruction by fire of the steamer which previously carried them.

—The land road from Mattawa to Lake Temiscamingue through Ontario is now open for traffic. Nine shanty teams went through from Mattawa to Opemican on Lake Temiscamingue in eighteen hours. The opening of this road will be a great boon to lumbermen and settlers on Lake Temiscamingue, who can forward horses and cattle with much greater dispatch, and at far less cost than by the old route.

—Mr. Gormully, of Gormully & Sinclair, has commenced an action in the Exchequer Court on behalf of a Michigan contractor, for some $3,000 against the Government. Mr. Hazleton sent a lot of timber under the description of dimension timber into the Dominion. Under this heading it would be admitted free. The Customs Department, however, insisted that it was manufactured and imposed duties accordingly.

—Port Arthur *Sentinel*:—The demand for lumber in this vicinity this season is something enormous, the new elevators requiring 8,250,000 feet alone, for which Messrs. Graham, Horne & Co., have the contract. These gentlemen have also contracted for the delivery of over 2,000,000 feet of lumber to be used in new buildings here and at Fort William, and it is safe to say that other local dealers and builders will use about half as much more.

—Rejoicing over the advance in price of square timber during the present season, resulting in the clearing out of all rafts held at Quebec, the Perth *Expositor* has the following: Mr. Wm. Caldwell of Lanark was one of the lucky ones, selling three years' timber at Quebec and this year's raft on the way down, at prices varying from 25 to 32 cents per foot. The total was 560,000 feet, and it will realize about $170,000, or an average of about 30 cents.

—The Department of Customs has been notified by Capt. Holmes, of the revenue cutter Cruiser, that lumbering operations are being conducted this fall on Fitzwilliam Island, Georgian Bay, by the Saginaw Salt and Lumber Company. It is estimated that 20,000,000 feet will be got out for export next spring, and Capt. Holmes advises that a landing waiter be sent to the Island early in the spring to estimate the cut, so that the proper duty may be charged.

—Lumbering operations at Algoma Mills are likely to be brisk the coming winter. John Rowan has five lumber camps in full blast, and still another is being established. John McLeod, of Pembroke, has arrived there with a gang of men for H. P. Shaw, whose camps are on the north shore of Lake Huron, in the Blind river district. His logs will be towed down Lake Huron to Algoma Mills, where they will be cut into lumber for the C.P.R.

—The immense water power of Sturgeon Falls, which has remained so long almost idle, is about to be utilized on a large scale. Mr. Baxter is about to erect a mill for grinding coarse grains for feed. Mr. Slinger is importing machinery for the erection of a door and sash factory, and a paper company is negotiating for the purchase of a site for the erection of a pulp factory, which will employ 100 men constantly. Should the latter industry be founded there, the poplar and spruce trees, which are so plentiful in the forests, will become a source of great profit.

—The Ottawa *Journal* says that the wages for shantymen are beginning to drop a notch lower than the figures readily given to the men some time ago. Then log cutters got $22 a month and board, and some even as high as a dollar a day. Now men are hired in lowertown to cut logs at $19 and $20 a month, and none but good men will ever get this high. The big rush to the woods is practically over for the season, although many of the firms will continue sending up men to augment the force now engaged in the woods, but the bulk of the men who will go up are now in the bush, and as the demand has lessened the wages have dropped.

NEW BRUNSWICK

—The shipments of deals to Europe from New Brunswick during the first seven months of the year amounted to 114,000,000 feet, against 82,000,000 last year.

—A complete lumber camp outfit smuggled into Canada from the United States has been seized at St. Stephen by the Customs authorities.

—Importers of spruce will have noticed the different character of the wood shipped from St. John, N.B., and from the Nova Scotian ports. The prevailing timber tree of New Brunswick is the white spruce, the deals shipped from Nova Scotia being cut from the black spruce, which may explain the difference. For purposes where strength and durability are required the black spruce is preferred. The color refers to the bark. Large sized trees near the mouth of the St. John river are said to be getting scarce, and supplies are being drawn from the upper tributaries.

—The recent very heavy rain falls re[illegible] month in the grea[illegible] freshet seen on [illegible] 1853. Not only was railway tra[illegible] Fredericton interfered with, but the damage done by [illegible] has extended to other parts of the province—railway and other bridges being swept away, logs set adrift, crops destroyed and other attendant injury sustained. Fairley's Mill, and the bridge connected with it, were in danger of being carried away. They were saved by stones being carted to them and placed on their floors as ballast. The water rose over the mooring posts at Millerton wharf and a good deal of lumber that was lying rafted in that vicinity broke [illegible] and much of it went adrift. Hundreds of thousands of feet must have thus gone adrift. It was feared that Somers' and Bryanton's drives would go adrift, but when the Northwest sheer boom was partially broken away, the logs that went down stream were caught and saved by a temporary boom stretched across the Northwest at Sinclair's. The wharf connected with the Redbank mill was badly damaged and the mill boom just above it carried away. Between twenty and thirty thousand feet of logs ran out of Barnaby river and nearly all of them went to sea with those from the Southwest.

NOVA SCOTIA.

—Hugh Robertson, who built the Joggins raft, says there will be an end of business here if the export duty is levied and timber owners hold to the high prices. It cost a great deal more to get the raft torn apart than he supposed. He is going to British Columbia to build a timber raft for San Francisco and one for Chili.

—Last month it was reported that there would be no more Joggins rafts, but the latest information goes to show that such is not the case. Mr. Robertson, who, as previously reported, is leaving for the Pacific coast to take charge of a log raft there, has closed a contract with parties on the spot to supply timber at the Joggins for a raft six hundred feet long and containing twenty thousand sticks. This raft, it is expected, will be launched next July.

—A correspondent from Bridgewater writing to a contemporary says: The present season has been very favorable for the lumbermen of this part of our province. There has been a larger manufacture in our water mills than ever known before, as seasonable rains brought down the stock, and kept the rivers at a good sawing head all summer. Vessels have been scarce, and freight rates very much higher than for the last few years, therefore shippers have not been able to move lumber freely. Stocks are larger than usual. There is now piled at Bridgewater about 8,000,000 feet, at Port Medway, 4,000,000 and at Liverpool 2,000,000, which may have to remain over winter or serve for winter shipment when the demand from the West Indies reaches here. The logs in the rivers will likely remain there till next spring. This will enable the mills to start, as the timber has to come from the heads of the streams, and is late in reaching the mills. The subject now most engrossing the saw mill men is the sawdust question. By a late edict of our paternal government, they are required "to keep all sawdust from the streams in Nova Scotia." To enforce this will curtail the business very much, as most of the mills are direct action (the saw gate connected with the wheel), and there will be waste in any attempt to stop the sawdust; and as most of the timber lands are nearly exhausted there is not stock enough to warrant the large expense of removing the sawdust by machinery. We think there will be a general stoppage of business until the matter is adjusted, as we cannot see the justice of the large Canadian and New Brunswick mills throwing all their refuse into the rivers. At Ottawa where the greatest quantity is manufactured, they are allowed to grind up the edgings, etc., and dump that also into the river. Until the edict is removed there will not likely be much preparation for next year's work, as it will not do to cut timber and allow it to spoil in the log.

RAMBLER'S PEREGRINATIONS.

I TOOK a run up to Gravenhurst some days ago, and had the pleasure of visiting some of the large saw mills which form a circle around Muskoka Bay. Lumbermen are thick in this part of the country during the summer, but it is evident that the climate in winter is not to ther liking as they nearly all seem to forsake their old haunts in the fall of the year and take up their abode in a more favored clime. This fact seemed to be particularly noticeable at the time of my visit, but perhaps it was a knowledge of my coming and not the aforesaid reason which accounted for their absence. However, I made myself familar with the place during my brief sojourn, and can remember with pleasure the free and easy cordiality which I met with while visiting the dozen or more mills in the place.

Gravenhurst is a smart town of some 2,000 inhabitants, situated in the Muskoka district. It is certainly an oasis in a rocky, but picturesque, country, in which, so far as I could judge while passing through by rail, it would be difficult to find sufficient soil on which to build a house. Still, while this is the case, there is abundance of woodland, large and apparently healthy trees growing out of crevices in the rock in thousands. A gentleman travelling beside me, in answer to my query as to how such trees get their nutriment, gave it as his opinion that the air made up for the deficiency in soil, which as the best answer to a difficult problem I give for what it is worth and for the want of a better solution.

The Gravenhurst mills—12 in all—are still busy cutting, but will soon shut down for the winter. The output this season is fully up to, if not above, the average. Mickle, Dyment & Co. operate three saw and one shingle mill, the combined output being about 15,000,000 of lumber, 15,000,000 shingles, and 5,000,000 lath. They will have four camps in operation this winter, and in the neighborhood of 160 men in the woods. The average number of men employed in and around these mills is 130. All the lumber manufactured by this firm is handled by Messrs. Christie, Kerr & Co. of Toronto.

I did not think while viewing the fine mill belonging to Mr. Isaac Cockburn such a short time ago, that in these rambling notes I would be called upon to chronicle its destruction by fire; but such, unhappily, is made necessary. I am not aware how this fire originated, but while there it occurred to me that there might be danger of fire connecting with the mill from the burner when the wind was blowing in the right direction. The refuse from this mill was carried in the ordinary way to the high rocks some fifty yards distant, where it was burned. It certainly did not appear to me as the safest plan to adopt, but, of course, my calculations may have been wide of the mark. During the progress of the fire on the 26th ult. two of the four boilers exploded, part of one being thrown a distance of two hundred yards. Fortunately the huge piles of lumber adjacent were left uninjured, but by the destruction of the mill Mr. Cockburn will lose about $20,000. He had, however, a fair insurance on the property which is certainly a matter of considerable satisfaction. This will not only be a severe drawback to the owner but also to the town, as about 60 men will be thrown out of work. Mr. Cockburn's cut this year, had the mill run a little longer, would have been 6,000,000 feet of lumber, 3,000,000 shingles and 3,000,000 lath. He has already got three camps established, and intends taking out an average cut. I learned that Mr. C. had serious thoughts of remodeling his mill the coming winter by introducing a rotary gang and other new machinery. Now that he finds himself minus even the old mill, I hope to hear of his carrying out his original intention of adding the latest improved machinery.

I failed to find either member of the firm of Thomson & Baker, but ran across the genial son of the latter gentleman, Mr. Thos. Baker, who has a good head for lumber, and I am glad to learn is making the most of his opportunities. In conversation with this gentleman I learned that Thomson & Baker own three single-circular mills at Gravenhurst and still another at Huntsville, a village some distance north. In their mills here they cut on an average of from five to six million feet of lumber, and from two to three million at Huntsville. Mr. Baker informed me that the lumber business here, as in many other places, was not by any means as profitable as in past years. Prices, however, appear firm and the demand fairly good.

I ran across Mr. Theodore W. Taylor, of the firm of G. W. Taylor & Co., but did not have an opportunity of interviewing him. This firm's operations are being carried on to about the same extent as in past years. They are cutting quite extensively for the Ontario Lumber Co. "Theo.," although getting on towards middle age, is one of the boys in Gravenhurst, and I would liked to have had an opportunity of getting better accquainted with him.

The McBurney & Laycock Lumber Co. are doing a profitable business here also, and lay claim to having one of the best equipped one-circular mills in the country. Their cut this year will be about 5,000,000 feet of lumber and 3,000,000 lath. Their average cut per day is 38,000 feet. Mr. C. Ayre is manager of this business and evidently understands his business thoroughly. Donogh & Oliver, of Toronto, will handle the entire output of this mill this year.

I was unable to pick up much information concerning the other mills here, further than that they were all running and doing a profitable trade.

Nearly all the logs intended to be converted into lumber at the Gravenhurst mills are brought by water a distance of about fifty miles, the assorting ground being at the mouth of Bracebridge river, eleven miles distant. All the mills are operated by steam, and the equipment is first class. The refuse is all disposed of by burners covered with sheet iron, each of which stands some 150 feet high. There is a complete net work of sidings connecting with the Grand Trunk Railway which renders the shipment of lumber easy. Speaking of the Grand Trunk railway reminds me that the one great great grievance among the mill men of Gravenhurst is the scarcity of cars for shipping lumber. Perhaps the reader will say that this is an old complaint, and so it is, but being such it is none the less serious. This difficulty has hampered the trade too long, and it is quite time that a united effort should be made to try to remedy the evil. Millions of feet of lumber are lying in the piling grounds awaiting the convenience of the railway company to move it. The retailer blows up the wholesaler for not filling his orders in a reasonable time; the wholesaler looks to the manufacturer; and the manufacturer do as he will, has no other course open but await the pleasure of the G.T.R. company. Surely if an honest effort were made to cater to the wants of such an important industry the railway companies could provide sufficient cars to meet the demand. I hope soon to see this difficulty removed, but a firm and decisive stand must be taken by the lumbermen before such a turn in the wheel of fortune can be realized.

I could say much more concerning the lumber interests of Gravenhurst but I have already occupied enough space for one issue. On my way south I dropped into the Longford Lumber Co's wooden-ware factory at Orillia, and was much interested in an inspection of their new and well-equipped factory. This factory only commenced operations last July, but already an extensive business is being carried on, about 45 hands being employed in the manufacture of tubs, pails and other woodenware. The factory has a capacity for turning out 2,500 pails and tubs per day, and the machinery, which is principally of American manufacture, has been selected from among the best in the market. By a novel and unique arrangement the whole premises including the private office, some distance away, are heated by the surplus hot air from the dry kiln. As THE LUMBERMAN has already published a full description of this factory I will not extend my remarks further. Mr. Geo. Thompson is the manager of this business, Mr. C. Wright, assistant office manager and shipper, while the mechanical department is under the supervision of Mr. D. A. Lundy.

Leaving Orillia I struck the little town of Waubaushene which is situated on the Midland division of the G. T. R., at ten p.m. and was fortunate enough to enjoy the hospitality of one of its leading citizens and his good lady, until nearly the wee sma' hours of the morning There was a large company of friends present enjoying one of those social gatherings which goes far to make life in a small country village endurable, if not pleasurable.

Waubaushene is the home of the Georgian Bay Consolidated Lumber Co., of which Mr. A. M. Dodge the well-known millionaire is president. In fact, I understood, that every foot of land and every building in the village is owned by this company. My visit here also was rather inopportune as Mr. Dodge had but a few days previous forsaken his magnificent summer house here and returned with his family to his winter quarters in New York. It was my pleasure, however, to meet the courteous Secretary-treasurer of the company, Mr. Jas. Scott, who kindly gave himself up for an hour to discuss lumber lore, and from this gentleman I gleaned some useful information, which for want of space will have to be discussed in a future letter. The Georgian Bay Lumber Co.'s mill here is undoubtedly one of the finest in Canada, if not in America. The outfit consists in the main of two stock gangs, a slabbing gang, twin circulars and a large circular saw. The most modern equipments, have been introduced, and in point of cleanliness it is certainly conspicious. But little material goes to waste here, for after the sorters for shingles and lath have done their work the burner receives but poor fuel. In a separate building adjoining the mill proper, is located the box factory, in which some 35 hands are employed. The machinery here is also of the best, and the factory has a capacity for turning out 5,000 standard size boxes per day. From 25 to 30 different sizes are manufactured, which all find a market in the United States. Stepping from the box factory, my escort, (who by the way, is an associate of my younger days), took me into still another building, in which are located the machine shop, engine and boiler rooms. The motive power consists of a pair of independent cut-off engines and seven steel boilers, 5 feet 6 inches in diameter, the latter being fed entirely by sawdust carried from different parts of the mill. In addition to this mill, of which I have given a casual glance, the same company own and operate two mills at Eyng Inlet, one at Collingwood and one at Port Severn, the average annual production of all these mills being from fifty to sixty million feet. Of this from 20 to 23 million feet is usually shipped by water and the balance by rail, the better grades finding a market in New York and elsewhere. At the time of my visit about one thousand men had been sent to the woods. and the intention is to make a large surplus cut this year, which course, I understand, has been made necessary in consequence of the company's limits having been badly damaged by fire during the past summer. I had almost forgotten to mention that a thorough system of fire protection has just been introduced at the Waubaushene mills, the outfit consisting of a large Northey pump and 800 feet of linen and rubber hose.

My very brief stay at Midland did not allow of my making a personal visit to the various mill in that town, but I picked up a little information here and there which will give the reader some idea of the extent of the trade carried on.

The Emery Lumber Co. in their two mills will cut from 11 to 12 million feet this year. They will get out of the woods fully as much if not more than in past years They will have about 40,000 pieces left over for spring sawing next year. This is an American firm, and some two or three years ago they turned out about 15,000,000 feet of logs from their limits on the French River. They also constructed a monster boat with a capacity of 3,000,000 feet of logs, the object being to convey their stock cut on the Canadian limits to the extensive saw mills at Bay City. After these 15,000,000 logs were ready for shipment the Canadian Government placed a duty of $2 a standard on all logs exported to the United States. The company could not ship the logs, which after lying a short time on the shores of the lake were sawn at Midland into lumber. The past summer the Shepherd & Morse Lumber Co. purchased the entire stock, and is now shipping it through Canada and the United States in bond for Buenos Ayres, South America, and Sydney, Australia.

Messrs. Chew Bros. in their one-circular mill have nearly finished a cut of 3,000,000 feet of lumber, together with 3,500,000 shingles and 2,000,000 lath. They ship all their lumber to Toronto and Hamilton.

The Ontario Lumber Co. have decided to cut nearly all their stock at Midland in the future, instead of Gravenhurst as heretofore. They own an excellent one-circular mill, capable of cutting from 35,000 to 40,000 feet per day. The cut this year, however, will not exceed 5,000,000, owing to having been shut a considerable portion of the season for want of logs. They intend operating largely in the woods the coming winter.

Messrs. Peters & Cain are also doing a good trade, and their cut this year will be about 3,000,000 feet.

The lumberman throughout the Georgian Bay complain that the past summer has been a very unfavorable one for them, owing to the prevailing high winds. Many logs have been lost, as many as five thousand pieces being scattered around the Bay at one time. Men for the woods in this locality are very plentiful, and as a result wages has been reduced considerably.

On my way through the Georgian Bay district I learned that the new Band mill recently erected by the William Hamilton Mfg. Co., of Peterborough, in Mr. Beck's new mill at Penetanguishene, was being tested, and I accordingly paid it a visit. The band saw is fast asserting its supremacy as a lumber producer as well as a timber saver, and the opposition to it which presented itself on its attempted practical introduction is dying out as its superiority becomes recognized. When the introduction of the band saw was seriously considered, and a few enterprising pine lumber manufacturers adopted the innovation, serious doubts existed as to whether the saving in timber would compensate for the loss of time or lack of speed as compared with the old reliable circular. But practical results have removed all doubts in that connection, and demonstrated that not only can the saving of nearly twenty per cent. in timber be accomplished but that the band saw is rapidly crowding toward the speed of the most vaunted and uesful circular. The mill above referred to is no exception to the rule as the work so far done by it is of the most satisfactory kind. So far as I am a judge from seeing this new band mill in operation and the quality of lumber it is producing, I would say that the owner of the mill has reason to feel as proud of its work as the manufacturers who built it. Mr. Beck informed me that the cut this year in his two mills would be about 10,000,000 feet. His operations in the woods the coming winter will not be quite as extensive as they were last season.

RAMBLER.

PART I.

WALNUT LOGS AND HOW TO PREPARE THEM.

BY ANSON A. GARD.

Few seem to know what an export log should be, but the number who think they know includes about all who have never before gotten out logs for export. These latter think that if a log is the required length and diameter it will pass, and that they should receive the quoted high price for it, and will feel, when the returns are received, that they have not been treated squarely. They forget that rough, crooked, knotty logs make only cull lumber, and that when any market is overstocked with just such timber, when at the best there is no demand for it, the price at which it will sell is very low indeed.

An export log must be straight, sound, free from large limb, or rotten knots, free from heart checks or wind shakes and should not be cut shorter than 10 feet and as few under 12 feet as possible.

When the tree is selected to be felled, a notch should be cut in on the side toward which you wish to "throw" it, the centre of the notch should be cut in toward the heart much deeper than the sides; when this is done start your saw a little above a line with the opposite notch and cut straight through. A tree can not only be sawed down quicker than it can be cut with the axe, but when down it is also "butted," thus saving much extra work.

When the tree has been felled, mark it off so that each log will be straight. This can usually be done even in crooked trees, unless the crook be a short one, in which case cut it out and use the piece for balusters. By cutting the logs 10, 12, 14 and 16 feet, the full length of the tree can be worked up to good advantage. When it can be done, as before mentioned, make as many of the logs 12 feet long as you can, as this length is best for export logs and also the best length for lumber.

Often when a tree is felled it may lie on a side hill, in which case care must be taken not to cut the logs slant ways, which you are sure to do if you let the saw "run."

Many a woodsman in order to safe an inch, loses a foot. He measures his log exactly of the foot mark, which is all right (although a log should be an inch over) providing he can run his saw "true," but nine out of ten sawyers will run to the right or to the left, and the bottom of the log may lack just enough to lose a foot. So I say don't be stingy, when it will pay you to be a little generous.

In some markets there is a duty on logs when they have been squared on the mill, while the same log will go duty free if hewn, besides a log looks better when properly dressed with the broad axe.

Too great care cannot be taken in selecting logs for shipping, as one or two questionable ones may reduce the value of a carload more than their value, while the freight on them is just as much as for the good ones, thus you lose both logs and freight. Therefore make it a rule not to select a log about which you have the least doubt of it passing. Having selected your logs, draw them to the railroad, if you ship by rail and there hew them on four sides to show a face taking care to use a large draw knife to smooth off the corners of the wanes, having first removed all bark therefrom.

When the logs are ready to ship, the ends should be painted with an inexpensive red paint. This not only prevents, to some extent, the logs cracking, but gives them a better appearance.

Just as soon as you have logs ready, load them at once; they will then come to the market looking fresh and will please the buyer far better than if they have been allowed to become weather-beaten and sun-cracked. The logs may cut out as much lumber and the lumber be just as good, but when a load of weather-beaten logs come to market it is surprising the difference in price they will bring. This is especially so in logs sent to foreign markets, where they are put up at auction to buyers who in the hurry and rush of a sale don't have time to carefully examine the lot, but who have to go by the looks, so that many a better lot of logs sells for less money than an inferior one well dressed and fresh looking.

In a country where snow covers the ground during the long winter months no one need be told to use a sled or drag, but where snow is the exception, or where it is never seen, a wagon must be used. There are wagons and wagons. I have been in countries where a regular log wagon would have been a curiosity. Here the loggers have from time without date hauled their logs on the high-wheeled farm wagon.

Two men are required, as the high wheel and sometimes both wheels on one side must be taken off, and the axles propped up. After much bother the log is finally loaded, and if more than one is to be taken on the load, the same process must be gone through with, and when the mill yard is reached, the wheel or wheels must again be removed. No one who follows logging can afford to use such a wagon when they can get one with which one man can do twice as much work in a day and do it easy to himself. This is the low broad tread log truck, requiring only to be driven alongside the log, "skids" run down from the tops of the wheels, the chain thrown under the log and back again to the opposite side of the wagon, then fastened to the "stretchers," the horses started, and your log is landed on the bolsters, and all in half the time required by the old tedious way. Counting the extra man and the time wasted, one could pay for a log wagon in a very short time. Another advantage is that the tire or tread being broad, a much larger load can be hauled over soft ground, as the wheels do not "cut in" like a narrow tread.

"Which will pay me better, to ship my Walnut in the log or saw it into lumber?" This question is the first one asked when the owner of Walnut timber is ready to make disposal of his wood.

The answer to the above will depend entirely on the given lot of trees. If they run large and smooth, it will pay to ship them in the log, but if they are but few large trees and many small ones, it will pay to saw them into lumber, as the large logs will enhance the value of the product more than can be realized from selling them in the log, even at the higher price at which the logs would sell. There are many advantages in selling logs instead of sawing them—other things being equal. In the first place the tree can be cut down and the logs delivered in market almost as soon as it could be sawed into lumber, thus gaining all the time required for sticking up and drying, five months at least saved, which to one of moderate means is a long while to wait.

Again, every producer of lumber will always prefer to know how much his stock will bring as it runs. When sold in the log, there is but one price, while if sawed into lumber the same log is sold at three and in some markets at four prices, and the aggregate price governed by an inspector who may never have seen a walnut tree grow.

Don't write to a log buyer or lumber dealer and say, "I have some logs," or "some lumber; what will you pay for them?" or "it" as the case may be. The fact that "it is good stuff!" don't convey any notion of what it is, or what it is worth. Take for illustration of how you should write to inform a buyer that you have logs for sale:

Mr. A.—Dear Sir: I have, now ready to ship, two carloads of Walnut logs, fresh hewed and in good order. There 26 logs in the lot and they measure as follows: (Give lengths and diameters, being careful not to measure more than they contain). I will deliver these at (give point of destination) for $— per M feet.—Yours, etc., J. S.

When the buyer receives this letter he knows that "J. S." has some logs; he knows how many, and what they contain; he knows that the writer means business, for he has put a price on his stock, and the result will be that J. S. will sell, and have the money invested in more trees, before the man who says: "I've got something, what will you give me for it?" will even get a reply to his letter. This is an age when men must be definite, if they would succeed—the man who don't tell what he has to sell will be passed by the one who lets the buyer know what he has to offer and what he wants for it.

One word of advice to J. S. and others who may write what they have to offer. Don't say that you have two cars of logs, that one will run twenty-four inches and larger, for which you will take $— per M., and one car twenty to twenty-three inches at $—, and in shipping them put some of the small ones in the higher priced car and expect to get the higher price for them, just because they were all together. This would seem unnecessary advice; had I not had a recent case of this kind I never would have thought that it could occur.

Poplar—or miscalled whitewood—logs are now being exported from localities where the rate of freight will warrant their shipment. The same rule for the preparation of Walnut logs will apply to Poplar. They must be evenly hewed on four sides and the wanes smoothly dressed.

I would call the attention of the hewer to one point in particular in preparing the log. Don't cut away too much of the wood *i. e.*, don't square the log, as by measurements there is a great loss over Scribner. A point in question. Two cars of Poplar logs, measured here by Scribner, have just been rejected in a German market on account of being too much squared. Thus not only a loss of wood, but a sale lost.

Different from Walnut, Poplar, Gum and such other rough bark woods, Cherry is shipped round. This may also be said of what few Ash logs there are exported.

When the sap is at work building up new tissues, making new leaves and twigs, the tree when felled is most apt to "check" when made into logs. For this reason valuable timbers should be cut before the middle of March in this climate, and earlier in the far South, then in July or August, when the sap has done its work and is at rest, you may begin and continue till March again. It is well in making Walnut logs to have a bucket of glue water and broad brush, and as soon as the log is sawed off "size" the ends, which when dry part of walnut logs

tends to keep out the air and prevents checking. This "sizing" is simply made with ordinary glue dissolved in hot water and made very thin.

Much more could be said on the subject of logs, but it would not change the one important fact that only good ones are required, and poor ones will ever be a risk to a shipper. If you who have logs bear this in mind you will find that it will pay you a large per cent. in satisfaction and the buyer will never tell you; "He has enough of your stock."

LOGS REDUCED TO INCH BOARD MEASURE.—GARD'S RULE.

ONE of the signs of the times is the extensive preparations that are being made to get out logs in Northwestern Ontario or rafting to mills on the other side of the international line. It is evident that their supply of standing timber at many points across the lakes is falling short and they are driven to have recourse to our forests. Now we have not too much pine for our own mills and the employment of our own people, so the development of this system of transportation in the log is not at all to be encouraged. The Dominion export duty on saw logs has hitherto acted as a deterrent to a very considerable degree, but as the demand for logs for United States mills becomes more pressing the restraining influence seems to have lost its effect. It is not the easiest thing in the world to collect this duty in the region where these operations are chiefly in vogue, but such arrangements should be made by the Canadian authorities as will ensure their not being evaded. If they want our logs in the United States they should certainly be made to pay for them.

THE LUMBER INDUSTRY OF THE OTTAWA VALLEY.

The following report, written by United States Consul Hotchkiss, a press edition of which was recently issued by government, is an able exposition of the subject on which it treats. At this juncture it will be read with profit by both Canadian and American operators who are interested in the question of free lumber. The report bears date February 2 :

In previous annual reports the fact has been stated that the Ottawa district was a manufacturing and not an agricultural district. The exportations of agricultural products are merely nominal, deserving of little attention through their insignificance. The all-absorbing industry is that of lumber, which is, as a specialty, not equaled in its extent and value at any other point in the Dominion. Such being the situation, my report will be confined mainly to facts and figures which are incident to the prosecution of the lumber business, not only of this district, but of the locality of country known as the Ottawa valley, through which, by means of the Ottawa river, this locality is drained of its forest products, and which river also furnishes the magnificent power to operate the saws which reduce the logs to shapely lumber.

The business of the past year has moved steadily onward. No difficulty has been experienced in readily marketing the output, and at prices fully equal to that of any preceding year. All desirable lots, meaning those lots especially known for their desirable qualifications, either sawed American style, viz : boards and plank, or English style, three-inch "deal," were principally sold before any of the season's logs were sawed. In this connection I may add that probably 50 per cent. of all the stock which will be sawed at Ottawa and vicinity in the season of 1888 is already sold, even while the trees are yet standing in the forests. The yearly output of the Ottawa city lumber mills will approximate 350,000,000 feet. The product of mills tributary to Ottawa and its agency, Grenville, will aggregate 250,000,000 feet, making 600,000,000 feet for the Ottawa valley district.

These aggregate figures to those unacquainted with lumber, or unaccustomed to lumber figures, will appear enormous ; but when I say that these figures, multiplied by three, will not represent the full sum of the yearly requirements of the lumber trade of Chicago alone, their insignificance will be apparent.

A false impression too generally prevails in regard to the importance and the influence on the American lumber markets of the pine lumber produced in Canada, as also the quantity of her available pine and the general quality thereof. In regard to the production of sawed pine lumber of a quality available for the United States market, and suitable for the demands of the English market, I firmly believe that the yearly aggregate will not exceed 1,000,000,000 feet. This quantity must be doubled to supply Chicago, and is but a fair supply for the little village of Tonawanda, N.Y., while Buffalo would simply view this quantity with complacency as bidding fair for her one year's necessities.

This quantity, however, must be divided between the United States and England with other foreign markets, while Canada, for her own requirements, must, of necessity, reserve a portion. As it is with the United States alone I have to deal in this report, I have made great efforts to obtain reliable figures, both in feet and values, of the trade of this section with the United States for the calendar year 1887. I have carefully compiled from the 2,875 certificates which have passed through this office for the year a table of the quantity of sawed lumber, with other forest products and the values thereof. Through the kindness and courtesy of the consuls at Prescott and Brockville, I am also enabled to give the amount in feet and value which has been declared through these consulates, which combined with Ottawa, embrace the total exports of forest products of the Ottawa valley. In my judgment the quantity indicated by the figures is a reasonable approximate to one-half of the amount of sawed pine lumber which is exported from Canada to the United States.

The unprecedented drouth of the past year, during the sawing season and until very late in the fall, undoubtedly curtailed the cutting capacities of the mills at Ottawa, specially and to a degree that of all the mills located on the Ottawa river, and which likewise extended to the log supply. The winter opened with a shortage of lumber on the docks for drying, estimated to be fully 50,000,000 feet. This shortage will be shown in the business of 1888, that of 1887 being merely nominally affected thereby.

The important question now so widely agitating the American people, that of free lumber, and I may add free logs—for free lumber to the Canadian should mean free logs to the American—is one on which I may not be expected to venture a personal opinion, but I may be permitted, from the standpoint of a lumberman of over 45 years active experience in the lumber business in Canada and the United States, to review the situation as it appears to exist, and permit others to draw such conclusions therefrom as may enlighten them toward reaching a just termination of a complicated question.

I think I am warranted in presupposing that the desired object to be attained in the remission of the duty on lumber is an anticipated benefit to the American consumer at large, both by cheapening the market price now, as well as tending to prolong the existence of American forests by the substitution of Canadian lumber and logs—the only other country which has white pine timber.

Will the remission of the $2 duty have the desired effect? I think not, and will give my reasons for the conclusion that no appreciable benefit will transpire to the American consumer, and why and how the advantage will accrue to the Canadians. The control of the prices of lumber in the United States is certainly and absolutely in the hands of the timber owners and large mill men. The standing timber is held in large bodies by heavy capitalists, who, owning the mills, can govern the supply of manufactured lumber, and this element of first control is the chief factor in making yearly market values, it being influenced only by the probable demand, present or prospective.

I assert that in the making of prices the American lumbermen have never been controlled or scarcely influenced in any degree by the competition of Canadian pine lumber. I confine my remarks to pine lumber, and have nothing to offer in respect to the spruce and hemlock of the eastern portion of Canada, tributary to the eastern states, or to the lumber of the northwest provinces, tributary to the United States territories and far western states ; but to the white pine sawed lumber, the produce of the middle part of the provinces of Quebec and Ontario, lying between Montreal on the east and Lake Superior on the west, within which bounds is produced the only quantities of white pine worthy of any consideration, and which embraces the Ottawa valley, the chief outlet of this immense district or pine belt lying north of the Ottawa river.

The fact that pine trees are not reproduced enters largely into the question of possibility of control of the timber. The question how, as well as by whom, are the pine forests of the United States and Canada owned and controlled is a factor in determining the future of prices and of the possible advantages to be derived by the proposed legislation.

The manner in which the United States Government has disposed of its timbered possessions is well understood, and that individual purchasers have come into possession of them in fee simple at a fixed price per acre ; that having thus obtained absolute control and ownership they can and do manage their own business affairs in connection therewith without let or hindrance from the government as grantor, such lands, subsequent to purchase by individuals, being subject only to local and state taxation. The timber thereon is cut at will or left standing, as the necessities or inclinations of the owners may compel or induce.

Turning now to the Canadian timber we find a widely different practice. The forest possessions are not sold by the governments which are the owners. The lands in Quebec are controlled by the provincial government of Quebec, while those in Ontario are controlled by the provincial government of Ontario. The Dominion government owns and controls but a limited area in the northwest. The forest possessions are not sold in fee simple, but are leased for a term of one year, under certain conditions and regulations, the *modus* of doing which is by public auction. Whenever the government may deem it judicious or opportune to dispose of certain areas of timbered lands it gives public notice of the time and place, with a description of the lands to be disposed of, and the privilege of leasing is put up for the highest attainable sum, which sum is to be paid simply as a bonus for the privilege of being the lessee of the lands offered, under conditions of lease or license which are statutory, and, of course, well understood by the bidders. The chief conditions of the lease, termed a "timber license," are that the lessee shall (additional to the first "bonus" paid), on the first day of May, pay into the crown land office a certain sum per square mile (640 acres), which sum was originally $1 ; then it was advanced to $2, and is now fixed at $3. If any trees have been cut on lands covered by the license, such cutting shall be duly reported under oath, and crown dues paid therefor according to the tariff schedule, as given below :

	QUEBEC.	ONTARIO.
Oak and walnut, per cubic foot	$0 04	$0 03
Maple, elm, ash and tamarack, per cu. ft.		02
Norway and white pine, birch, basswood, cedar and other square timber, per cubic foot	02	02
Pine saw logs, including culls, each	22	(*)
Spruce saw logs, 13½ feet long, each	05½	10
Hemlock saw logs, 13½ feet long, each	06	10
Hardwood saw logs and tamarack, round	22	25
Balsam saw logs, 13½ feet long, each	05	10
Pipe staves, per 1,000	7 00	7 00
West India staves	2 25	2 25
Cordwood, hard, per cord of 128 feet	16	20
Cordwood, soft, per cord of 128 feet	08	12½
Cedar rails, 10 to 12 feet long, per 100	25	01
Cedar pickets, per 100	15	01
Cedar or pine shingles, short, per 1,000	08	01
Cedar or pine shingles, long, per 1,000	15	01
Cedar telegraph poles, each	06	01
Cedar fence posts, per foot in length	00½	01
Cedar hop poles, per 100	20	01
Rails, other than cedar, per 100	10	01
Pickets, other than cedar, per 100	05	01
Railway ties, any timber, each	02	(†)
Hemlock lath wood, per cord	15	01
Hemlock bark, per cord	32	30
Birch sticks, 28 feet long, each	25 to 30c.	1c. per cu. ft.
Knees, according to size, each	5 to 25c.	(†)
Futtocks, according to size, each	10 to 25c.	10
Cedar for shingles, per cord	16	12½
Pine for shingles, per cord	20	12½
Boom timber, round spruce, per lineal ft.	00½	01¼ cub.
Boom timber, pine or tamarac, pr lineal ft.	01	01¼ cub.
Small round spruce spars, under ten feet, per lineal foot	00½	
Birch, per cord of 128 feet	30	

(*) $1 per 100 feet. (†) 15 per cent. *ad valorem.*

ADDITIONAL EXPORT DOMINION CUSTOMS TARIFF.

Pine and Norway saw logs, per 1,000 feet, board measure	$2 00
Spruce and hemlock saw logs, per 1,000 feet, board measure	1 00
Shingle bolts, per cord of 128 feet	1 50

By the character and sum of the annual land dues ($300) and the nature and amount to be paid as timber dues (per tariff), a full appreciation of the position of the lessee will be had, while the lessor, the government, it will be also observed, continues its sole control over the timber. The only right which the lessee possesses is to cut the timber on his licensed lands and annually pay the government its demands, and when promptly paid the continued right to renew the license yearly.

It is likewise the right of the government to change the terms and conditions at will, taking effect after the first of May of the following year. I will refer to the last order making such changes, by which it will be seen how absolute is the government control and their disposition in the premises.

DEPARTMENT OF CROWN LANDS, TORONTO, April 29, 1887.

Public notice is hereby given that, by order in council of 27th instant, the rate of ground rent on timber limits or berths is increased from $2 to $3 per square mile per annum ; and the dues on square and waving pine timber are increased from 1¼ to 2 cents per cubic foot ; and the dues on pine saw logs are increased from 75 cents to $1 per thousand feet, board measure.

The increased ground rent to be payable on licenses to cut timber granted and renewed on and after the first day of May, 1887; and the increased dues on pine timber and pine saw logs to be payable on such pine timber and saw logs as may be cut after the date last above mentioned.

(Signed)
F. B. PARDEE,
Commissioner.

It will be observed that this order is dated April 29th, to take effect May 1st, and that without any prior notification of intention being given. This order means an additional tax upon limit holders varying in its effects upon licenses according to their holdings, but in sums ranging approximately from $1,000 to $80,000 individually on the annual dues to be paid on the lands, in addition to which comes the further advance on the timber cut.

I have been thus explicit in describing the systems of the two countries, for to my mind they are the key by which the situation and effect may be safely prejudged in case free lumber becomes a reality.

There is no dispute that the American manufacturer controls the making of prices. In doing this he is not influenced by the Canadian supply in any degree. If the duty of $2 is removed it will not affect the American price, because it has never been a factor and will still be unfelt. No lower price will prevail in the United States than heretofore, and no different net results will be experienced by the manufacturer. The Canadian, on the contrary, will lay his timber down in the American market at $2 less per thousand, and will obtain for it the same as the American does, so that the net result to the Canadian manufacturer will be a clear gain of the $2 which the American government has remitted. This additional net result to the Canadian manufacturer will, however, be of very brief duration.

Having shown how the governments [illegible] their control of the timber lands and their disposition of them to the utmost, I am confident that [illegible] will pass before a public notice will issue [illegible] increase in annual and timber dues has been [illegible] council, in sums sufficient to absorb the $2 per thousand to the provincial treasuries.

Some may question the light treatment which I give to production of Canada lumber exported to the United States. I believe the statement to be sound and reliable that Canadian sawed pine lumber sent to the United States for consumption is not sufficient in volume to affect prices by being a factor in any degree.

The following table, showing in feet and value the declared exports of sawed lumber and value only of other forest products for the calendar year ending December 31st, 1887, will be proof positive to experienced lumbermen of the soundness of my conclusions. This table embraces the declared exports of pine at the ports of Ottawa, Grenville, Brockville and Prescott, and is a fully reliable statement of the exports to the United States of the Ottawa valley section.

Location.	For consumption.	Value.	In bond for export	Value	Value
	Feet.		Feet.		
Ottawa	150,199,285	$2,017,648.47	33,698,348	$610,795.71	$1[illegible]
Grenville	30,695,339	263,393.21			
Prescott	9,497,803	116,513.25			[illegible]
Brockville	36,747,472	429,679.64			[illegible]
Total	227,139,959	$2,827,234.55	33,698,348	$610,795.71	$22[illegible]

The following shows the exports from Canada (customs returns) of pine boards and plank from all of Canada to the United States for the fiscal year ending June 30 :

	FEET.	VALUE.
1884	557,29[illegible]	$ [illegible]
1885	[illegible]	[illegible]
1886	[illegible]	[illegible]
1887	[illegible]	[illegible]

The following shows the export of pine saw logs to the United States in the following years :

	FEET	VALUE
1884	[illegible]	$ [illegible]
1885	[illegible]	2,3[illegible]
1886	[illegible]	[illegible]
1887	2 [illegible]	[illegible]

By comparing the quantities shown in the first table, being the amount exported from the Ottawa valley with the amount shipped annually from all of Canada, it will be found that the first bears a percentage to the total exported in 1887 of 50 per cent., showing the important position which the Ottawa district holds in this industry.

The second table will show also the correctness of my statement that the volume of pine lumber exported to the United States from Canada is too insignificant to have any influence in the making of prices in the United States. The figures show that if all the lumber sent into the United States from Canada was placed in the Chicago market it would supply but one-quarter of the requirements of that market alone, and but one-half of the quantity handled in either Tonawanda or Buffalo.

Regarding the few logs shown to be exported to the United States, they are of no account whatever, nor do I believe that if "free lumber" were to prevail that any appreciable increase of log exports would be seen, for the logs would, to a large extent be manufactured into lumber at the place of growth, or approximately so, as long as the lumber was admitted free. This course presents very many palpable advantages as against the expense of the transfer of the mill.

A few mill owners on the shores or adjacent to the shores of Lake Huron and Lake Michigan, having exhausted their available timber, would make a few spasmodic attempts to import logs from Canada, but a very brief attempt to handle logs across the lakes would develop the superiority of the location nearer the timber. In addition to this, by operating their mills in Canada they would find the English markets open to them, for it is in Canada that the English buyer of pine lumber always has and undoubtedly will continue to look for his stock. This advantage to the manufacturer is one which will not be lost or disregarded, for the English market requires from Canada pine lumber (mainly cut into "deal") in volume about half as large as is sold to the States. The English demand also is gradually changing in the character of its requirements of "deals," sawed boards and plank.

That the character and volume of the English trade demand for sawed pine lumber from Canada may be appreciated, and its relative importance to the Canadian as compared to his trade with the United States, I append a

statement of the exports to Great Britain for the same years which I have heretofore given for that to the United States. This comparison shows that fully double the quantity is sent into the United States market in feet over that sent into the English market, but as that sawed for the English is 90 per cent "deals," sawed 3 inches thick, and is now accepted down in quality made from quite "commonstock," the greater advantage to the manufacturer lies in catering to the English requirements.

PINE BOARDS, PLANKS AND "DEALS" EXPORTED FROM CANADA TO GREAT BRITAIN IN THE FOLLOWING YEARS. (CANADIAN STATISTICS.)

	1884.		1885.	
	FEET.	VALUE.	FEET.	VALUE.
Plank and boards ..	24,484,000	$ 297,786	19,156,000	$ 251,270
Deals.....	700,766,000	7,610,813	198,393,250	2,679,670
Total.....	725,250,000	$7,908,599	217,549,250	$2,930,340

	1886.		1887.	
	FEET.	VALUE.	FEET.	VALUE.
Plank and boards..	12,673,000	$ 155,221	17,016,000	$ 241,360
Deals.....	205,326,000	2,944,230	207,861,500	3,148,161
Total.....	217,999,000	$3,099,451	224,877,500	$3,389,521

The abnormal exports of the year 1884 will be specially observed, but cannot be explained.

This subject is a prolific one, and very many points of interest and commercial value could be entered into in connection therewith, but to do this would occupy more space than is allotted to this character of consular reports. If, however, from the statements, conclusions and Statistics given I have assisted toward a clearer understanding of the free lumber problem the purpose in view will have been attained.

OTTAWA EXPORTS.

[Reported for THE LUMBERMAN by Geo. W. Hotchkiss U. S. Consul.]

The following statement gives the declared Exports to the United States, of forest products from Ottawa, Canada, for the quarter ending Sept. 30. 1888.

		VALUE.
Lumber, feet.....	58,892,240	$772,323.28
Lath, pcs.....	15,732,050	19,588.52
Pickets, pcs.....	2,425,283	12,150.87
Box Shooks, val.....	6,000	47,171.42
Posts, val.....	6,775	397.50
Poles, val.....	508	482.60

Hemlock Bark, cds.....	1,059	5,295.00
Match Blocks, cds.....	287	1,004.00
		$864,010.85
Lumber shipments apportioned as follows :		
By Water.....		36,284,340
By Rail.....		22,607,900
Total number of feet.....		58,892,240
	FEET.	VALUE.
For duty.....	53,794,780	687,124.07
In bond re-export.....	5,097,460	85,199.21
Total.....	58,892,240	$772,323.28

OUR TIMBER EXPORTS TO BRITAIN.

Since our last issue the following cargoes of Canadian wood have been reported entered at the various United Kingdom ports :—

AT BRISTOL.—Ontario, from Montreal, 95 stds. deals. Aldine, from St. John, 13,596 deals, battens, scantlings, boards and ends. Norman, from Shediac, N. B., 15,587 deals, scantlings and ends. Quebec, from Montreal, 2,596 pine deals, 2,075 red pine deals, 7,554 spruce deals.

BELFAST.—Lothair, from Miramichi, N. B., 19,505 deals, 5,000 palings.

BARROW.—Habor, from Halifax, 6,855 deals.

CARDIFF.—Stella, from Shediac, N. B., 14,886 deals and ends. Odin, from Sheet Harbor, 14,019 deals and ends. J.H. McLaren, from St. John, 26,163 deals. Gettysburg, from St. John, 33,988 deals.

CARVARNON.—Dusty Miller, from St John, N. B., 509 birch logs, 2,891 birch planks, 4,461 deals, 3,387 deals and ends.

FLEETWOOD.—Doore, from Halifax, N. S., 11,431 deals.

GLASGOW.—Alcides, from Montreal, 9,603 deals, 163 pcs. waney board, 358 pcs. oak lumber, 62 pcs. birch, 136 pcs. ash. Chestina Redman, from Bangor, 42,238 bdls. spoolwood. Siberian, from Montreal, 4,581 pine deals. Cynthia, from Montreal, 3,600 staves, 6,556 deals. Grecian, from Montreal, 1,200 deals. Cock o' the North, from St. John, N. B., 2,129 birch planks, 5,508 spruce deals and battens. Ella Moore, from Spencer's Island, 12,716 spruce deals. Colina, from Montreal, 2,295 deals. Carthaginian, from Montreal, 4,493 deals and ends. Circe, from Montreal, 674 deals, 2,680 deal ends, 322 pcs. oak lumber. Concordia, from Montreal, 1,260 pcs. oak lumber, 15,800 deals.

GLOUCESTER.—Estella, from Miramichi, N. B., 40,895 deals. Otto, from Miramichi, 16,598 deals. William Nordon, from New Mills, N. B., 24,419 deals. Vila, Chatham, N.B., 40,424 deals.

GREENOCK.—Gylfe, from Quebec, 175 pcs. oak, 120 pcs. red pine, 602 pcs. waney pine, 1,616 deals, 2,267 deal ends, 491 spruce deals. Alfhild, from Quebec, 775 pcs. white pine, 16 pcs. oak, 487 pcs. ash, 159 pcs. red pine, 72 pcs. waney pine, 3,332 pine deal ends, 2,201 pine deals, 1,578 spruce deals. Norwood, from Quebec, 445 pcs. red pine, 206 pcs. oak, 109 pcs. elm, 44 pcs. ash, 13 pcs. maple, 339 pcs. white pine, 455 pcs. waney pine, 2,385 deals, 2,185 pipe staves, 4,800 W.O.W.I. staves, 2,020 deal ends, 3,063 spruce deals. Princess Alexander, from Quebec, 77 pcs. oak, 152 pcs. elm, 400 pcs. waney pine, 3,257 deals, 1,260 deal ends, 861 spruce deals, 3,338 pipe staves, 3,600 W.O.W.I. staves, 333 pcs. square pine, 223 pcs. red pine, 125 pcs. square pine.

LEITH.—Martin Luther, from Quebec. 440 pcs. hewn fir, 13 pcs. hewn oak, 78 pcs. hewn elm, 29 pcs. hewn ash, 72 pcs. hewn birch, 6,650 deals and ends, 59 pcs. hickory. Exalona, from Montreal, 3,308 deals, 307 deal ends.

LIVERPOOL.—Lake Ontario, from Montreal, 8,082 deals, 4,149 boards. Sardinian, from Montreal, 761 deals. Trust, from West Bay, N. S., 13,799 deals and battens, 1,405 deal ends, 86 scantlings, 468 deals. Toronto, from Montreal, 19,635 deals, 2,490 boards, 106 deal ends. Puertoriqueno, from St. John, 33,525 deals and battens, 4,313 boards, 1,023 birch planks. Parisian, from Quebec, 1,854 pine deals. Sariva, from Montreal, 7,274 pine deals, 789 spruce deals. Hugo, from St. John, 784 stds. deals, 44½ stds. ends. Valona, from Richibucto, N.B., 29,879 deals and ends. Lake Superior, from Montreal, 2,686 deals, quantity deals, boards and ends. Capulet, from Miramichi, 71,977 deals and battens. Valona, from Richibucto, 2,987 deals. Bertie Biglow, from St. John, 17,459 deals and battens, 414 scantlings, 8,077 deal ends, 473 boards, 863 pcs. birch. Circassian, from Montreal, 2,377 sidings, 6,922 deals. Oregon from Montreal, 16,948 deals, 8,097 deal ends, 3,386 boards, 2,329 pcs. elm. Enrique, from St. John, 40,814 deals, 1,816 scantlings, 9,263 deal ends, 4,860 boards, 530 birch planks. Saturnina, from St. John, 53,963 deals and battens, 7,502 boards, 3,468 scantlings, 12,154 deal ends. Lennil, from St. John, 828 pcs. birch, 17,563 deals and battens, 76 scantlings, 3,714 ends, 2,933 deal ends. Lake Ontario, from Montreal, 5,001 deals, 14,181 pcs. lumber, 2,391 boards, 39 scantlings. Cassius, from Quebec, 14,322 spruce deals and ends, 1,127 pcs. waney white pine, 505 pcs. square white pine, 71 pcs. red hickory, 110 logs ash. Kanoma, from Richibucto, 35,399 fir deals and ends, 6,610 palings. Sardinian, from Montreal, 874 pine deals. Benan, from Chatham, N.B., 48,102 deals, boards and ends. Nikana, from St. John, 28,661 deals, 901 scantlings, 4,141 ends, 1,890 boards. Polynesian, from Montreal, 1,163 pine deals. Montreal, from Montreal, 6,957 deals and ends, 461 deals, 9,921 boards. Lake Nipigon, from Montreal, 3,328 boards, 4,423 deals. Lake Huron, from Montreal, 9,528 deals, 5,522 boards. Vestfold, from Chatham, N.B., 550 deals, 657,700 palings. Northumbria, from Quebec, 182 pcs. oak. 56 pcs. elm, 1,093 pcs. white pine, 4,505 spruce deals, 1,600 spruce ends. Vancouver, from Montreal, 11,035 deals, 12,250 boards, 7,575 deals and ends. Vanduora, from Quebec, 79 logs oak, 100 logs elm, 193 pcs. red pine, 1,329 pcs. white pine, 3,212 pine deals, 3,625 pine deals and ends. Canopus, from Montreal, 5,210 boards, 1,882 ends, 21,712 deals. Capenhurst, from Miramichi, 21,431 deals and ends, 10,000 fir palings.

LONDON.—Pomeranian, Montreal, 6,404 deals. Grassbrook, from Montreal, 11,731 deals, 399 ash planks, 5,766 staves, 1,215 deal ends. Nestorian, from Montreal, quantity lumber, 3 pcs. wood. Ulunda, from St. John, 11,594 deals, 40 stds. deals. Assyrian, from Montreal, 320 pcs. oak. 179 pcs. lumber, 10,017 deals. Freidrich, from Quebec, 46,168 deals, 3,093 ends. Corin, from Quebec, 30,995 deals, 1,803 ends. Fremona, from Montreal, 818 pcs. lumber, quantity of basswood boards, 7,735 deals.

LONDONDERRY.—Semaria, from Quebec, 5 pcs. hewn oak, 30 pcs. hewn elm, 2 pcs. hewn ash, 10 pcs. hewn birch, 377 hewn fir, 15,599 deals. Ellida, from Quebec, 830 pcs. sawn fir.

LLAANELLY.—Camilla, from Pictou, N.S., 6,544 pcs. birch and sawn fir.

PLYMOUTH.—Valborg, from Quebec, 23 pcs. elm timber. Canova, from Quebec, 467 pcs. hewn oak, 1,087 pcs. hewn fir, 2,488 pcs. sawn fir.

SUNDERLAND.—Erminia, from Quebec, 577 pcs. hewn fir, 719 deals.

SWANSEA.—Spes and Fides, from Shediac, N. B., 10,305 pcs. sawn fir. Medusa, from Yarmouth N.S., 15,425 deals, 994 ends. Medusa, from Yarmouth, 5,160 sawn birch timber.

TRALEE.—Parima, from St. John, N.B., 10,800 deals.

WESTPORT.—Eglfeden, from St. John, N.B., 8,504 deals.

YARMOUTH.—Budstikken, from Montreal, 5,991 deals and ends, 5,726 deal boards. Lydia, from Quebec, 13,314 deals and ends.

THE NEWS.

QUEBEC.

—The E.B. Eddy Manufacturing Co., of Hull, is now manufacturing vessels from sawdust capable of resisting fire. Sawdust and mill refuse will soon become an important commodity.

—The bad feeling which has prevailed for some weeks past between the French and English-speaking workmen employed by Hurdman & Co., of Hull, culminated in a free fight a few nights ago among the hands. Over one hundred men participated in the *fracas*, and quite a number were injured by being struck with sticks and stones.

—The saw mills belonging to the E. B. Eddy Manufacturing Co., of Hull, have suspended operations owing to the want of logs. The transfer of Messrs. Hurdman & Co.'s Magnissippi limits to the above company has been made. The price paid as stated in the deed of transfer was $320,000. The general impression among the lumbermen is that the Eddy company have secured one of the best pieces of pine country in the Ottawa valley. The company intend only working their new limit for logs. No square timber will be taken out.

MANITOBA AND THE NORTH-WEST.

—Mr. Morden has opened a lumber yard at McGregor.

—A. H. Van Etten has opened a lumbed yard at Winnepeg.

—Walker's lumber yard at St. Boniface has been sold by the bailiff.

—Prominent Michigan lumbermen are exploring the timber limits to the north of Calgary, N. W. T.

—Mitchell has sold out his lumber business at Brandon, and contemplates starting a yard at Douglas.

—The traffic on the Selkirk branch of the C.P.R. is very heavy at present, largly owing to shipments of lumber from the Lake Winnipeg mills.

—The lumber cut on Lake Winnepeg this season is placed at about 7,000,000 feet, valued at $13 per thousand feet. A considerable quantity of ties have also been cut on the lake.

—The Alberta Lumber Co., who have had their machinery on the ground for the past year, are now putting up their saw mill at Little Red Deer, and expect to commence operation soon.

—A patrol of mounted police will be placed along the south boundary of Manitoba to put a stop to the wholesale stealing of timber and evasions of Custom duties thereon by residents of Dakota.

—The demand for lumber throughout Manitoba still keeps up well, and manufacturers are generally behind with their orders. If the present movement continues long the mills will shut down for the winter with very light stocks, and by spring lumber will be a scarce article. Prices hold stiff at list quotations as follows : Dimension—2x4 to 12x12, 12 to 16 ft. long, $15 ; do 10, 18, and 20 ft long, $16. Fifty cents per M advance on each foot over the above length up to 24 feet long. One dollar per M advance on each foot over 24 feet long. $1 per M advance on each inch over 12 inches surface. Surfacing, 50c. per M ; Surfacing and sizing, $1.00 per M. Boards—1st, common, rough, $16.50, dressed, $17.50 ; 2nd common, rough $15, dressed, $16 ; Culls, rough, $11 ; dressed, $12 ; 1st common, stock, 12 in, rough, $19, dressed $20 ; do, 8x10 inch, rough, $18, dressed, $19 ; 2nd common, 12 in, rough, $17 ; dressed $18 ; do, 8x10 inch, rough, $16, dressed, $17. Ten feet long and under, $1 less per M. Shiplap—10 inch, $17.50 ; 8 inch, $17. 8 and 10 inch flooring and siding at $1 per M advance. Siding, ceiling and flooring—1st, 6 inch, $29 ; 2nd, do, $25 ; 3rd, do, $21 ; 4th, do $18 ; 1st, 5 inch, $29 ; 2nd, do, $25 ; 3rd, do, $20 ; 4th, do, $17 ; 1st, 4 inch, $29 ; 2nd, do, $25 ; 3rd, $19 ; 4th, do, $16. $1 per M advance for dressing on both sides. $1 per M less for lengths 10 feet and under. Bevel siding—No. 1, 1st siding ½ in x 6 in, $20 ; No. 2, do $17. Stock—B, $35 ; C, $30 ; D, $25. Clear, 1 inch—1st and 2nd, $32 ; 3rd, $28. 1¼, 1½, and 2 inch—1st and 2nd, $40 ; 3rd, $35 ; selects, $30 ; shop, $25. Mouldings—Window Stops, per 100 feet lineal, 75 cts. ; Parting Strips, do, 50 cts. ; ¼ round and cove, per 100 feet lineal, 60 cts. Casing—4 inch, O. G., per 100 feet lineal, $1.50 ; 5 in, do, $1.75 ; 6 in, do, $2 ; 8 inch, O. G., base, $3 ; 10 in, do, $3.75. Lath, $1.75. Shingles—1st quality, $3 ; 2nd do, $2.50 ; 3rd do, $1.50 ; 4th do, $1. Dealers are requested to order by number. No delivered prices.

BRITISH COLUMBIA.

—Messrs. Dunsmuir & Sons are building a large sawmill at Union Coal Mines, Comox, B. C.

—The first mill on the west coast of Vancouver Island will be erected by A. Broder & Co., of Morrisburg, Ont., who have purchased a large tract of timber land on Alberin Canal.

—Notwithstanding the recent death of Hon. J. G Ross, of Quebec, the Ross-McLaren mill project will go on. It is understood that the construction of the big mill at Warminster, B. C. will be commenced at once.

—For some time the saw mills located on the Rocky Mountains, on the line of the C. P. R., have complained of the high freight rates which have been charged on lumber shipped to the only available market in the Territories to the east. The C. P. R. have now made the following reduction in lumber from points named to Calgary: Pallester, from $18.50 to $16.50; Golden, from $20 to $17; Donald, from $22.50 to $18; Beaver Mantle, from $23 to $18.50; Six Mile Creek, from $23 to $16; Roger's Pass, from $24.50 to $20.50; Illicillewaet, $25.50 to $22.

—The Vancouver *News-Advertiser* says:—One of the things which causes much surprise to strangers visiting the various saw mills here when a vessel is being loaded with lumber for China, is the enormous length and size of many of the sticks of timber composing the cargo. In answer to enquiries many different explanations are given of the special uses to which these large pieces are put in China. The alleged reasons, however, are seldom accepted as satisfactory by persons who have been in the Celestial Empire, and who while not observing any structures in which timber of such large dimensions is used, have seen these large pieces quickly sawn up on their arrival. The real explanation of the peculiar character of the orders for lumber received from China will probably be found in the fact the customs duty there is levied on the piece and not by the foot or any other ordinary measure or quantity. The larger the individual piece of timber, therefore, the lower will be the amount of duty payable on it in proportion to the quantity of lumber it contains.

NEW BRUNSWICK.

—The work of engineering a dam building scheme for the relief of lumbermen on the St. John river, has been undertaken by Mr. Pond, of Sheer-boom fame. Lumbermen have been very much troubled by delays in getting their logs through Grand Falls, where the recent big jam was formed. It is probable that an improvement Company will be formed and incorporated to carry on the work.

AMERICAN.

—Thirty million trees have been planted in Kansas this year.

—The tendency in the shingle market is towards greater firmness in prices.

—Bush fires have again been doing great damage throughout the state of Michigan.

—The total cut of Muskegon, Mich., shingle mills this season will be about 430,000,000.

—Scarcity of cars for transporting lumber are reported throughout the different Western States.

—It is estimated that there is in the forests of Arkansas from $700,000,000 to $1,000,000,000 worth of lumber.

—It is thought that wages may be a little lower than last season as more labor is offering than there is a demand for.

—There is a noticeable dullness in the demand for walnut lumber, but it is said that holders of large stocks of dry lumber are not at all disposed to make concessions.

—The Tonawanda lumbermen are going to have a joint debate on the effect of the tariff on lumber. We may therefore expect to hear some startling revelations at an early date.

—There has been an evident disposition among lumbermen this year to push work in the woods as fast as possible before the winter fairly sets in. It is surmised, however, that the cut of logs will fall short of previous years.

—The collector of customs at Suspension bridge has been informed that the provisions of schedule D. T. J. new 219, imposing a duty of 50c per 1,000 feet on boards "planed or finished" applies to the number of feet board measure, and not surface measure, as held by the department's decision of April 8, 1879.

—The Michigan and Wisconsin lumbermen who have held on to their hemlock timber, are in a fair way to realize handsomely as a reward for their persistence and faith in the future of this most despised wood. Already the demand for the timber as well as for the bark is presenting itself from the east.

—An official report has been made of the amount of lumber surveyed at the port of Bangor, Me., from January 1 to October 1, 1888, as compared with surveys for the same period in the two preceding years. There were 13,919,320 feet of dry pine surveyed for the nine months, as compared with 12,193,552 feet for 1887, and 13,527,414 for 1886. In green pine the figures are 8,921,256 feet for 1888, 5,902,792 for 1887, and 6,000,906 for 1886. The showing in spruce was 82,558,919 feet for 1888, 75,327,306 for 1887, and 72,333,570 for 1886. In hemlock it was 13,411,240 feet for 1888, 12,778,953 for 1887, and 11,765,369 for 1886. The totals are 118,810,735 feet for 1888, 106,202,608 feet for 1887, and 103,527,159 feet for 1886. The increase over 1887 is in detail as follows: Dry pine, 1,725,768 feet; green pine, 3,018,459 feet; spruce, 7,231,613 feet; hemlock, 632,287, total, 12,608,127 feet. The total increase over the showing of 1886 is 15,283,576 feet.

EUROPEAN NOTES.

—An effort is being made in England to open up a market there for Australian hardwoods, and it will therefore not be welcome news to American lumbermen who are interested in the hardwood export trade.

—It is reported that an English company is in process of formation for the purpose of buying up several saw mills at Pensacola, Fla., and cutting yellow pine for the foreign market on a large scale.

—It is said that there is a shortage in stocks in Quebec pine timber in the English markets, and the prediction is freely made that the St. Lawrence river shippers will be practically masters of the situation during the rest of the season. A lack of vessel accommodation is likely to prevent the free shipment of stock, so that which is able to secure transportation will probably sell readily and bring good prices.

—An English journal states that timber rafts on the Rhine are often fully as large and valuable as the monster American log raft so much discussed of late. For instance, a raft went down the Rhine from Mayence to Holland which was 725 ft. long and 170 ft. broad. It carried a crew of 120 hands, housed in some dozen huts along the raft, and the timber was worth $20,000.

PERSONAL.

Jonathan Francis, a lumber merchant of Pakenham, Ont., is dead. He was immensely wealthy.

Mr. Joseph Oliver, of the firm of Donogh & Oliver, wholesale lumbermen, of Toronto, has recently returned from a visit to the Pacific coast. He was very much impressed with the timber resources of British Columbia and Alberta.

Messrs. Tennant & Co., the well-known wholesale lumber firm of 9 Victoria street, Toronto, inform us that they have removed their business office to No. 3 Dock, foot of Bathurst street. Our readers should bear this in mind when anticipating a call.

Mr. Robert Moore, who has been representing Messrs. Christie, Kerr & Co. at Gravenhurst for some years past, has severed his connection with that firm and expects to leave for Carahell, Florida, the early part of this month. He has accepted a similar position with a lumber firm at that place. Mr. A. O. Symington, lately in the employ of Messrs. Thomson & Baker, is also about leaving for the same place. The LUMBERMAN extends to them its best wishes for their future success in the warmer clime to which they are going.

By the death of the Hon. James G. Ross Canada loses one of its wealthiest and best known lumbermen and merchants. He has been connected financially or otherwise with almost every business house in the timber trade, either as manufacturer, millman or merchant, exporter or lumberman, during the past two generations. His principal office was in Quebec, but his interests were very much scattered. He was president of the Quebec Bank, a member of the Senate of Canada, and held many other important offices. Owing to delay in securing an engraving of the Hon. gentleman which was intended for this issue, we will hold over our more extended notice until next month.

It is rumored in official circles that Mr. R. R. Dobell, Quebec's leading lumber exporter, and son-in-law of Sir David Macpherson, will receive the Senatorship left vacant by the death of the late Hon. J. G. Ross. The name of Mr. E. K. Price, the surviving head of the great firm of Price Brothers, is also mentioned as a possible candidate for the seat, as the division represented by the late Mr. Ross, the Laurentides, embraces the region from which the Prices have taken their title of "Kings of the Saguenay." Moreover, Mr. Price's brother, the late Hon. David Price, was Mr. Ross' immediate predecessor in the Senate.

We had the pleasure of a call some days ago from Mr. A.W. Spooner, of Port Hope, patentee and manufacturer of Spooner's celebrated Copperine for making journal bearings. By indefatigable energy and the assistance of an article which recommends itself wherever used, Mr [illegible] his goods into almost every manufacturing [illegible] Dominion. No better evidence of the superi[illegible] of Babbit metal could be found than the very [illegible] tion given it by Mr. John [illegible] Toronto Water Works, who has been [illegible] bearings and crank pins. Two tho[illegible] was used in connection with thes[illegible] in Canada. A testimonial of th[illegible] no user of machinery should fail to avail [illegible] uable composition. Enquire of your hardware dealer for Spooner's Copperine.

FIRE RECORD.

F. W. Beckman's lumber mill at Beaver Bank, N. S., w[illegible] destroyed by fire recently, together with a large [illegible] lumber.

A blaze took place on Oct. 12th in the sawm[illegible] lumber yard belonging to John Ashcroft, at Wiarton, On[illegible] The loss was not very heavy.

The sawmill and machine shop belonging to Mr. H. A Calvin, at Garden Island, near Kingston, Ont., were destroyed by fire the latter end of September. The loss amounts to about $20,000 with small insurance.

On October 5th sixteen lumber piles belonging to Mr. J. R. Booth, were destroyed by fire at Rochesterville a suburb of Ottawa. The loss is variously estimated at between $2,000 and $3,000, with insurance distributed over a number of companies.

CASUALTIES.

Two men lost a thumb and finger respectively a few days ago in the Dickson company's saw mill at Peterborough, On

John Taylor, an employee of the Rathbun Co., at Campbellford, was killed recently while shunting a car of coal.

Geo. Golding, 60 years of age, fell on a rotary saw in Jordan & Stetson's mill, St. John, N. B., and was alm[illegible] two. Death was instantaneous.

An employee of R. Hurdman & Co., at Ottawa was found some days ago lying unconcious, having, it is surmised, been almost beaten to death by some person or persons unknown.

During the early part of October a young man named Gauther, from Vaudreuil, Que., was almost crushed to death by a falling pine tree in the bush at La Ferne des Pi[illegible]s, near Buckingham. The poor fellow had to be carried 32 miles on a litter before receiving medical aid.

A peculiar accident recently occurred at Ste Anne de la Perade, by which Louis Joseph Baribeau, a citizen of [illegible] place, lost his life. Mr. Baribeau, being in Mr. Rosseau's saw mill, was standing in front of a circular saw when a splinter violently projected struck him in the face. The fatal piece of wood not only destroyed one of his eyes, but sank deeply into his head, causing death in less than fifteen minutes after the accident. The deceased was a married man, father of four children, and a brother to Mr. Baribeau, advocate, of Three Rivers.

ITEMS OF INTEREST.

"Three-fourths of the moss on trees grows on the north side; the heaviest boughs on spruce trees are always on the south side; and, thirdly, the topmost twig of every uninjured hemlock tips to the east."

A new industry started in Maine, if carried on here would mitigate our destructive forest fires. The tops of pine and spruce trees left by the lumbermen are utilised. After removing knots and other objectionable portions, and steaming the remainder to extract resin, it is ground to pulp for paper, pasteboard, and the many other forms of the material.

A statement that has been going the rounds of the papers would appear worthy of investigation before being accepted as a fact, viz., that "dry rot" in timber is contagious, and can be carried by saws and other tools which have been in contact with infected wood and thus vitate sound timber such tools afterward come in contact with.

American yellow pine, laid upon a foundation of concrete, is considered one of the best street paving mediums at present used in Germany. Employed alone or in combination with cypress it has proved more durable than granite blocks laid at the same time and in like situations.

CROWDED OUT.

A large amount of interesting matter has been unavoidably crowded out of this issue. The size of the LUMBERMAN will be materially increased next issue to allow of a larger amount of reading matter. We trust our readers, and especially those who are particularly interested in some reports not appearing in this issue, will accept our excuses.

MACHINERY FOR SALE

H. W. PETRIE'S list of Sawmills and general wood-working machinery for sale.
ONE new 2 or 3 block sawmill, with 6-inch saw.
ONE sawmill, with timber limit in Parry Sound.
ONE 2-block mill. Butterfield build.
ONE 2-block mill, small portable size.
ONE automatic sawing machine, Bavley make.
ONE 66-inch inserted and 64-inch solid saws.
TWO stave cutters with parts-61.
ONE gang lath mill, new.
ONE Waterous self-feed grist mill and bolter.
ONE Goldie & McCulloch Hall self-acting shingle machine.
ONE self-acting shingle machine, Green Bros. make.
ONE Waterous self-acting shingle mill and jointer.
ONE Eureka self-acting shingle machine and jointer, I. Frenchette, maker, St. Hyacinthe, P. Q.
TWO Doherty hand swing machines.
ONE upright swing, with 40-inch saw.
EIGHT wheel jointers, various makers.
THREE drag saw machines.
ONE heavy 24-inch planer and matcher, Rogers' make.
ONE new eclipse planer, matcher and moulder, Galt make.
ONE 24-inch planer and matcher. Picton make.
TWENTY-inch planer and matcher.
EIGHTEEN-inch planer and matcher.
LITTLE Giant pony planer and matcher.
NEW Economist 24-inch planer and matcher.
ONE 27-inch revolving bed double surfacer, Galt make.
ONE 24-inch surfacer, McKechnie & Bertram.
ONE 24-inch poney planer, Frank & Co. build
ONE 20-inch poney planer, Frank & Co. build.
TWENTY-four-inch surfacer, Kennedy's make.
TWENTY-four-inch surfacer, hardwood bed.
TWENTY-two-inch surfacer, wood bed.
EIGHTEEN-inch surfacer, all iron and steel.
SIXTEEN-inch buzz planer, Galt make
THREE-side moulder, all brass heads, Rogers' make.
THREE-side moulder No. 2, Cant, Gourlay make.
TWO one-side moulders, McKechnie & Bertram make.
ONE one-side moulder, wood frame.
NEW 3-side moulder, Cant Bros, make, Galt.
TENONING machine, double cope, Goldie & McCulloch.
ONE J. A. Fay tenoner, small size.
TWO Ross tenoners.
ONE double cope tenoner, McKechnie & Bertram.
BLIND slat tenoner, Cowan build.
POWER mortiser, Goldie & McCulloch make.
TWO power mortisers for heavy work
LARGE stock of foot mortisers, new at $15 each.
UPRIGHT boring machine with column.
SIX power scroll saws, various makes.
ONE 34-inch band saw, Hamilton Tool Co.
TWO new band saws, Galt make
NEW 34-inch pedestal and 24-inch bracket band saws.
ONE upright Goldie & McCullock shaper.
NEW iron Top shaper, Cowan make.
SHAPER, heavy iron column, Cant Bros. make, Galt.
ONE wood frame shaper and counter shatt.
ONE velocipede foot power shaper, Hornes.
ONE automatic handle lathe, Sheldon Bros.
ONE handle or gauge lathe, Bailey.
ONE axe handle or spoke lathe, new.
ONE Blanchard spoke lathe, Fay make.
ONE broom handle lathe, wood frame.
NEW wood splitting machine. Send for photo.
BOBBIN lathe with cutters for cotton and woollen mills.
SET of hoop machines, Goderich make.
SET match machinery for round matches.
LOT of lumber and log cars for sawmill use.
FOUR pole road cars, 7 feet, 10 inches gauge.
SANDPAPERER, new Galt make.
FOOT mitering machine, Cant Bros. make.
SIX saw benches, cut off and ripping.
TWO new wood turning lathes with rests, &c.
LOT of moulding and matcher cutter heads.
ONE iron bowl machine, American make.
ONE choir mortising and boring machine.
ONE set spoke machines, Fay make, Cincinnati.
ONE knife grinder, Galt make.
ONE hand wiring machine.
ONE beading and moulding attachment for planer and matcher.

SEND for lists 13 and 14, and mention wants. Address H. W. PETRIE, Brantford, and No. 9 York street, Toronto, opposite Union Station.

GRATEFUL—COMFORTING.
EPPS'S COCOA.
BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

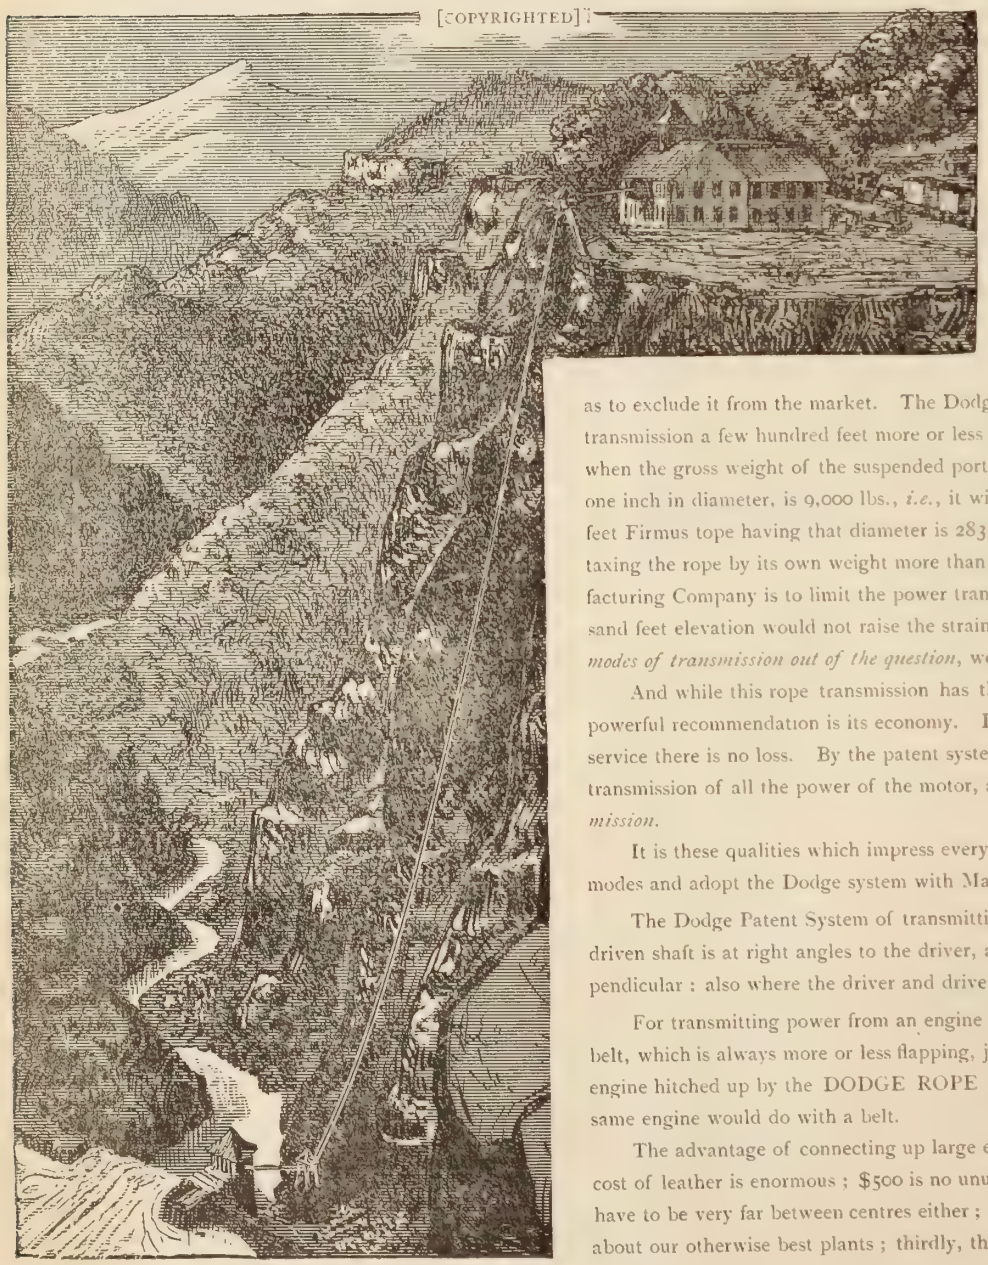
A. GOODBY, Manager.

TRANSMITTING POWER BY ROPES GROOVED WOOD PULLEYS

The purpose of this cut is to illustrate the possibility of carrying power upwards to a great height by the

DODGE SYSTEM OF POWER TRANSMISSION BY MANILLA ROPES AND GROOVED WOOD PULLEYS

THIS SYSTEM WILL MAKE AVAILABLE MANY WATER POWERS NOW UNUTILIZED.



EVERY railroad which crosses a mountain divide avails itself of the precipitous sides of streams to find practicable grades to and from the summit levels. These streams often have considerable volume and rapid fall. The railroad is frequently at an elevation of several hundred feet above the water, with mountains behind, capable of furnishing inexhaustible supplies of raw material, mineral or vegetable.

Heretofore the utilization of such material near the place of supply has generally been impracticable, because of the impossibility to transmit the power of the stream up the mountain side to the neighborhood of the means for transportation. In such a case as that represented, however abundant may be the raw material, the cost of sending it down to the water level, and returning the manufactured article to the level of the railroad, might easily so handicap the product as to exclude it from the market. The Dodge system, however, renders it possible to laugh at difficulties such as this. To this transmission a few hundred feet more or less is of no moment. A rope suspended in the air will break near the upper support when the gross weight of the suspended portion exceeds the tensile strength of the rope. The tensile strength of Firmus rope, one inch in diameter, is 9,000 lbs., *i.e.*, it will break only when the suspended load amounts to 9,000 lbs. The weight of 1,000 feet Firmus tope having that diameter is 283 lbs., and therefore a vertical elevation of 1,000 feet might be overcome without taxing the rope by its own weight more than a trifle over 3 per cent. of its strength, and as the general practice of Dodge Manufacturing Company is to limit the power transmitted to about 5 per cent. of the breaking strain, it is evident that even a thousand feet elevation would not raise the strain to the vicinity of the danger limit, and an elevation which would put *all other modes of transmission out of the question*, would really not make a difference with *this* transmission worth noticing at all.

And while this rope transmission has the wonderful adaptibility shown in the illustrations heretofore published, another powerful recommendation is its economy. Its first cost is a tithe of the cost of any other Transmission, and after being put to service there is no loss. By the patent system of Dodge Manufacturing Company, the rope runs *without slip*. This means a transmission of all the power of the motor, and from 20 to 25 per cent. more than can be secured *by any other system of transmission.*

It is these qualities which impress every power user, and which has caused many large establishments to discard all other modes and adopt the Dodge system with Manilla Rope.

The Dodge Patent System of transmitting power by ropes is cheaper and superior to belts in many cases, such as where the driven shaft is at right angles to the driver, also where the drive is perpendicular, particularly when it is quarter twist and perpendicular : also where the driver and driven are close together ; also for long drives, such as across a street or a stream, etc.

For transmitting power from an engine to the line shaft, this system is unequalled : steady all the time, not like a heavy belt, which is always more or less flapping, jerking and stretching, then slipping and losing power. It is safe to say that an engine hitched up by the DODGE ROPE SYSTEM will do 25 per cent. more work on the same consumption of fuel than the same engine would do with a belt.

The advantage of connecting up large engines in this manner cannot be too highly recommended. In the first place, the cost of leather is enormous ; $500 is no unusual sum for an engine of three or four hundred horse-power, and the pulleys do not have to be very far between centres either ; in the second place, the noise at high pressure is terrific, and is the worst feature about our otherwise best plants ; thirdly, their weight is quite a factor ; fourth, they require attention that a rope does not ; fifth, it requires a man in the business to put one on right, and sometimes they don't always do it right ; sixth, any deviation out of line of the shafting affects the belt, while it has no effect on a rope.

The above points, to say nothing of the first cost, which would be about one-thirtieth part of leather, are enough to banish the leather belt for main driving into everlasting oblivion, especially in the minds of those that have had experience with large leather belts.

The fact alone that by raising the tention wheel the engine can be turned round by hand for repair or adjustment is enough to endorse it in the minds of those who have had to do a little pulling on a fly-wheel with the entire shop hitched on.

For estimates of cost and all information relating to this system of transmitting power by ropes, apply to the undersigned, who also manufacture the best belt pulleys in the world.

THE DODGE WOOD SPLIT PULLEY COMPANY,

THE CANADA LUMBERMAN.

VOLUME VIII. NUMBER 12. PETERBOROUGH, ONT., DECEMBER, 1888. TERMS, $1.00 PER YEAR. SINGLE COPIES, 10 CENTS.

THE CANADA LUMBERMAN

PUBLISHED MONTHLY BY

ARTHUR G. MORTIMER,

OFFICE: SIMCOE STREET, PETERBOROUGH, ONTARIO.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market but, also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested for even if not of great importance individually they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade or specially interested in it, who should not be on our list thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

INSTRUCTIONS have been issued from the Department of Inland Revenue that hereafter no lumber which has passed through the Ottawa or Lachine river canals shall be delivered up unless a *bona fide* check, properly endorsed by the owner himself, is presented. The change is evidently aimed at the middlemen, who it is said have been profiting largely out of the old arrangement. Heretofore anyone having a specification and filing it at the office, provided the dues were paid, could have the lumber delivered up to them. Bankers assert that the risk has become too great for them and have accordingly strongly advocated the change referred to.

THE London *Times* furnishes some interesting statistics as to the frightful consumption of wood used as sleepers for railway tracts, and points to its figures as a strong argument in favor of the employment of metal sleepers. It appears that the six principal railway companies of France use more than 100,000 sleepers per day, or 3,650,000 per annum. As a tree of the usual dimensions will give only ten sleepers, the railways in question require 1,000 trees per day for sleepers alone. In the United States the consumption is much greater, amounting to about 15,000,000 sleepers a year, which is equivalent to the destruction of about 170,000 acres of forest. The annual consumption of sleepers by the railways of the world is estimated at 40,000,000, and this is probably less than the actual number. The *Times* remarks: "From these figures the rapid progress of disforestization will be understood, and it is certain that the natural growth cannot keep pace with it. Hence we have had during the last quarter of a century the frequent inundations and changes in atmospheric condition." It would be interesting to calculate how much wood is annually wasted in Canada on sidewalks, block pavements, telegraph and telephone poles, and general railway work. The figures we fancy would startle those who have been advocating greater conservatism in the ultilization of our timber resources. It is of course to be noted that for all the purposes mentioned wood is needlessly and unprofitably used.

THE competition of the work by which the Lake St. Peter channel between Quebec and Montreal has been deepened to permit the passage of vessels drawing twenty-seven and a-half feet has been celebrated by a formal opening. This improvement is one of considerable interest for the trade. From the recurrent troubles at Quebec and other causes the practice has been increasing of loading timber and lumber at Montreal instead of at the ancient capital as formerly. The improvement and deepening of the channel between the two cities will have a strong tendency to attract vessels to Montreal. This will not only be a convenience to the trade desiring to ship from that port and tend to keep down freights, but it will also have a beneficial influence in the port of Quebec, confirming them in the better ways under the new regulations that have been adopted, and leading to further improvements in the same direction. This increase of competition and extension of shipping facilities in the St. Lawrence ports cannot fail to be beneficial.

THE appointment of a committee by the lumbermen's branch of the Toronto Board of Trade to present their grievances between the Council of the Board and obtain the co-operation of that body is a sensible step towards obtaining a very important object. That object is to obtain from the Grand Trunk and other railways a change in their methods which are felt to be unfair and prejudicial to the trade. The foremost grievance is that lumber being loaded on flat cars is often exposed for considerable periods unprotected to rain, snow and ice by which its weight is considerably augmented, and as it is weighed at the point of delivery instead of the point of shipment, freight has to be paid on this not beneficial addition of so much water. It is claimed that the weighing should be done at the point of shipment. A further grievance is that the joint classification tariff is unjust, as it assumes that certain quantities of lumber will have so much weight, when as a matter of fact they do not weigh so much as is thus assumed. There are also complaints of a great shortage of cars said to be otherwise employed. These and minor grievances are now in a fair way to be forcibly presented with the weight of combined action and there is a better prospect of obtaining redress than by individual remonstrances.

THE great advance in ocean lumber freights during the past year is given a striking illustration by the River Platte business. Twelve months ago the rate on lumber from Portland, Me., to Buenos Ayres ruled at $9.50 per M. with an increase of $1.50 per M. to Rosario or other up river ports. On August 24, 1888, there was an advance to $13 to Buenos Ayres. The following week brought the figures at $13.50 and a week later to $13.75. Now, $13.50 is freely offered to load for Montevideo for orders, and if ordered from that port to Buenos Ayres $14.50 is paid. The rate to Buenos Ayres direct is $14 and to Rosario $15.50. Even with such rates as here quoted the placing of orders is very difficult, and the Boston *Post* says one Boston firm has orders for twenty million feet of lumber on hand at the present time and is experiencing much difficulty in securing transportation for any portion of it. It had been supposed that many large coasters engaged in the coal trade would be induced to accept River Platte charters by the high rates obtainable, but the coal carrying trade has also enjoyed a most prosperous season, with a steady demand for vessels of both large and register, at very satisfactory rates. In other lines, too, the rates have advanced in proportion, and are steadily maintained.

IN the course of last month the choice of the President of the United States was virtually decided, for the proceedings of the electoral college have become a mere formality. Gen. Harrison will be enstalled next March and the Republicans have gained the day. Not only have they elected their candidate as President, but they have gained greater strength in both Houses of Congress if not the complete control, which is still uncertain. They will at least have greater power to carry any legislation they may propose than the Democrats have had for the last four years. This is a matter of interest to Canada, and especially to the lumbermen. Whether there will be any important change in the tariff or what direction it would take no man can foretell. The Democrats talked of taking off the duty on lumber, [illegible] unanimous, and the Re[illegible] It is of some significance that in more than [illegible]ne R[illegible] procession during the compaign might [illegible] "no free lumber." Mr. Blaine too, the great [illegible] leader, in addressing audiences in lumbering districts in Maine spoke to the same effect. There seems therefore [illegible] bability, if there ever was any, of a remission of the duty. As to the larger question of reciprocity some of the Republican organs and speakers, notably Mr. Blaine, have declared that Canada should not enjoy their markets unless it became part of the United States, but of course in politics no such declarations are final. There seems to be no immediate probability of a change.

THE invitation that has been extended by the Canadian authorities to delegates from the Australasian colonies to [illegible] Ottawa for a conference of the best means of exter[illegible] making closer their commercial relations and kindred [illegible] is a wise step and one that should [illegible] Our trans-continental line of railway, the [illegible] is being established with the ass[illegible] [illegible] grants, the contemplated cable beneath the Pacific ocean and the proposed reduction of postage, are all steps to bring Canada and Australasia practically closer together and to open their markets to each other. A large proportion of the imports into the Australasian colonies consists of articles that Canada could very well supply though at present they are obtained from foreign countries. The Australian forests are chiefly hardwood and in any of their journals it will be seen that they rely chiefly upon "Norway pine" and "Oregon pine." Why should not Canadian pine almost wholly replace these foreign woods? The quality is at least equal if not superior, the distance is shorter and soon there will be far better facilities for communication. Already there has been of late a considerable impetus given to exportation of timber and lumber from British Columbia to Australia with a strong tendency to a further increase of this trade. Full advantage should be taken of the improved facilities that are being provided or are foreshadowed for the near future, and the visit of the Australian delegates should be utilized to the utmost to promote an intercolonial commerce of which the trade in timber cannot fail to be one of the most important branches. The members of the trade should organize to see that their interests are duly represented and their views adequately expressed at this important conference.

MESSRS. PAQUETTE, whose lumber yard and sash and door factory at Montreal, were recently destroyed by fire with a reported loss of $75,000, uninsured, are taking the matter into court. They claim that the city should reimburse them on account of alleged insufficiency of the water supply, the machinery and the fire brigade to protect the property from destruction by checking the fire. As having a bearing on this question of the responsibility of the corporation it may be remarked that the city of Montreal is not contending that the fire insurance rates should be reduced in compliance with an agreement to that effect when the protection against fire should be rendered effective. The underwriters, however, decline to make the demanded reduction at present on the ground that the city had not yet complied with the conditions as to the efficiency of the means to prevent fires. If the proceedings of Messrs. Paquette are pressed in the courts this question of the efficiency of the fire protection and the responsibility of the municipality will receive a thorough ventilation. The proceedings and their results will be watched with great interest by many in the timber trades, who feel that while they are called upon to pay heavy municipal taxes they do not obtain in return that adequate protection for their property which they think they have a right to expect for their contribution to the municipal exchequer. Then, again, when they complain of the oppressive insurance rates on their property they are told by the underwriters that the neglect of the municipalities to render their means of fire protection effective necessitates the maintenance of high rates to cover the risk. A stirring up of the whole question in the courts will not be amiss.

REFERRING to the sawdust question and the report upon its accumulation made under the auspices of the Dominion Government, the *Northwestern Lumberman* says. "The fact about sawdust is that it will stay where it collects unless there is something to disturb it, being very different from sand in respect to shifting ; and experience has demonstrated that it will remain a long time in water without decomposing. Damaging effects from its accumulation cannot always be staved off. But the mill men of the Ottawa valley seem to be placed between two fires—the Government is complaining about the practice of dumping sawdust in the river, and the Canadian insurance companies, for some unexplained reason, object to the use of sawdust as fuel. Judging from the practice this side the line, there is no good reason why they should. If proper piping and care is used in conveying sawdust to the furnace or the refuse burner, there is no extra hazard, and if the American insurance companies object seriously to such risks sawdust would not be used for fuel in the states so universally as is the case. Saw mills, planing mills and other wood-working establishments burn sawdust, shavings, etc., right along, and they appear to get all the insurance they want.

THE annual report of the division of foresty of the United States Department of Agriculture, recently issued, contains some interesting information. The import duty laid upon manufactured lumber in 1872 had the effect at first of decreasing importations from Canada by from 50 to 60 per cent. until 1876-77 when an upward tendency of imports began. A comparison of the imports of the last three years with those of the preceeding three, shows a noticeable decline in all classes of foreign products from the amounts to which they had gradually increased up to 1884, when the importation of manufactured lumber reached nearly the same amount that was imported in 1872. For the decrease in unmanufactured wood now, the Canadian export duty of $2 on logs may serve as an explanation, but causes must have worked to effect the reduction of manufactured lumber in the face of decided enhancement of value of product. The difficulty of access and interested distance from the market is probably the explanation. It is suggested that, so far as the saving of standing supplies is concerned, there need to be no fear or hope from foreign competition, for the "quantity of standing pine in the United States and Canada is reduced to a condition of absolute control ; it is held in strong hands on both sides, and will not be lightly frittered away."

THE CANADA LUMBERMAN closes a record of eight years existence with the current issue. Since the present management assumed control a strong effort has been made to raise THE LUMBERMAN to the front rank of Dominion trade journals. How far we have succeeded in accomplishing this object our many readers are left to judge. Commencing with Vol. IX we have decided to largely augment our correspondence department by engaging the services of thoroughly reliable and practical correspondents at the following points throughout the Dominion : Toronto and Ottawa, Ontario ; Montreal and Quebec, Quebec ; St. John, N.B. ; Halifax, N.S. ; Winnipeg, Man. ; and New Westminister, B. C. We trust that we will receive applications to fill these positions from some of the most practical and able writers in the lumber trade. The editor will look to each correspondent to faithfully report all matters of news pertaining to the lumber and wood-working industries throughout his division, and discuss all matters within his knowledge affecting the lumber interests. As liberal terms as possible will be allowed those whom the editor may select to carry on the work, and it is sincerely hoped that the trade in general will further our efforts by extending as liberal a financial support to the LUMBERMAN as possible during the year 1889.

THE export duty on saw logs has been raised by order-in-council, as authorized by statute, from two to three dollars a thousand. This was no doubt considered necessary to check the increasing export from Georgian Bay and especially the very large increase that was evidently contemplated. For instance the Saginaw Lumber & Salt Co. had just been reported as having purchased three timber berths on Spanish River from which they expected to cut two hundred million feet to be rafted in the log to their mills near Saginaw city. A subsequent report from East Saginaw stated that it had been anticipated that a hundred and fifty million feet of logs would be brought to the river from the Georgian Bay next season, and that the raised duty had caused a trade for two hundred million feet to be declared off. It is indeed well known that the Michigan lumbermen have been making very extensive investments in Canadian pine to supply their mills with logs. There will now, however, be less inducement for them to operate in this manner, and if they want to use Canadian logs they will have to erect mills in this country. This is only fair so long as they have the benefit of their own import duty of two dollars a thousand on our lumber. The Michigan lumbermen are very much disgusted and threaten to use all their influence to procure an increase of the United States import duty on lumber in order to console their disappointed hopes. In this, however, they are not likely to be successful, for there are also important interests in the country which are eager to see the duty on lumber reduced or removed and they would protest very strongly if instead of a reduction there were an increase.

JUST as the November issue of THE LUMBERMAN was going to press word was received from Sault Ste Marie that the Spanish River Lumber Co. (Buswell & Co,) of Michigan, had failed, with liabilities $100,000. A week or so previous to this announcement one of the company's mills was burned on the Spanish River, the estimated loss being $40,000, without insurance. The Canadian Bank of Commerce was the largest creditor, being interested to the amount of $60,000, and they declined to carry the company's paper any longer. The authorities of this bank also suspected some fraud in connection with the recent fire, and accordingly had a warrant sworn out for the arrest of the principal of the defunct firm, F. E. Buswell, and placed it in the hands of a couple of officers to execute. They succeeded in serving the warrant at Spanish River. The prisoner insisted on dining before he left, and invited his captors to partake. They accepted, and while they were so engaged Mr. Buswell stepped outside to see a man, as he said, who happened to be on board the company's tug, which stood alongside with steam up. Mr. Buswell no sooner touched her deck that she cast off, and before the officers of the law had finished their meal, had him well on his way to his home across the lines, where he still remains and defies his would-be captors. The result of the failure of this firm will strike a heavy blow at the lumbering trade on the North Shore of Lake Huron. They had about 200 men in their employ, 150 of which were already in the woods at the time of the failure. It is stated that some of these men have so far trusted Buswell & Co. as to leave their wages with the firm, and in some instances as much as $500 has been deposited. The report that the burnt mill would soon be replaced by a new one is a mistake as the company has decided to tow its logs in the future to Detour or Cheboygan for sawing.

REFERENCE was made in our last issue to the case of H. R. Hazleton, of Michigan, which is now before the exchequer courts. This suit is attracting a great deal of interest in lumber circles as it will decide what constitutes dimension timber in the interpretation of the present customs laws of the Dominion. The minister of customs has filed his defense in the exchequer court as the Crown's defense. It reads as follows :

It is admitted that the claimant did, during the years 1883-1884, import into Canada from the United States a quantity of oak lumber and timber, but it is not aware that the quantity or value of such is correctly set out in the statement of claim. The fact is that the oak lumber and timber so imported by the claimant were manufactured, inasmuch as the same, at the time they were imported into Canada by the claimant, were not oak planks and boards coming within the classes of lumber and timber mentioned in the 726th item of the tariff as free of duty, but on the contrary, such lumber and timber were manufactured, inasmuch as the same were, at the time they were imported into Canada, sawn, cut and shaped to the exact sizes and dimensions required for the separate parts and pieces, of the wood-work of railway cars and carriages, and were, therefore, dutible under the items 504 and 506 of the tariff : in consequence of which the crown was legally and properly entitled to be paid the duties thereon. It is denied that the amount of $2,733.25 was paid by the claimant to the customs officers under protest, as mentioned in the statement of claim. On the contrary, it was paid by claimant without compulsion. Further, it is contended that the amount sought to be recovered was paid by the claimant as duties of customs upwards of three years before the commencement of this action, and no application for repayment was made within three years before the action was commenced. Hence no action lies against the crown.

Mr. Hazleton bases his claim on section 726 which provides that "lumber and timber, plank and boards, sawn, or basswood, cherry, walnut, oak, etc., not manufactured" may be imported into Canada free of duty. The sections 504 and 506 of the customs acts, and under which the minister of customs has classified Mr. Hazleton's lumber, reads : "Wood and manufacturers of, and wood-ware, namely, pails, tubs, churns, brooms, brushes and other manufactures of wood not elsewhere specified, 25 per cent. *ad valorem*, and lumber and timber not elsewhere specified 20 per cent. *ad valorem*." A date will shortly be fixed for the hearing of the case.

AN agitation has already been started by Michigan lumbermen to induce Congress to double the import duty on Canadian lumber. This, as will readily be seen, is intended as an offset to the recent increase in the export duty on pine logs by the Dominion Government. Such action on the part of our neighbors will not cause the slightest surprise to Canadians, as they are already quite aware of the Yankee capacity for retaliation. Neither do we fear such retaliation, even should it be adopted, which is certainly very doubtful. The United States has arrived at that stage in the history of its lumber industry that to do without the products of our Canadian forests would be next to impossible, and should Congress add another $2 import duty the change will militate more against the trade of that country than it will against Canada. For years American lumbermen have been cutting all their available timber regardless of future demand, and now that they find their limits exhausted, they are compelled to look to Canada for a future supply. But while they come in competition with our own lumbermen in picking up some of our most available limits they refuse to build mills in this country, but seek to tow the timber through Canadian waters to American mills. When the Dominion government two or three years ago placed an export duty of $2 per thousand feet on Canadian logs entering the United States, it was thought that that would be sufficient to put a stop to the practice. It has been seen, however, that while it has diminished the export of logs to a considerable extent the practice is still being indulged in. Brother Jonathan may squirm and threaten Canadians with retaliation in its most gastly visage, but on the lumber question we certainly hold the trump. Canadians extend the hand of good-fellowship to our Yankee friends and invite them to join in fair and equitable competition, but will not sanction the cutting of our timber to be manufactured in American mills.

HARDWOOD INSPECTION.

One of the subjects but seldom touched upon heretofore in the columns of THE LUMBERMAN is that of inspection of hardwoods. In order to cultivate the desire to inaugurate a a uniform system, which, whatever else it might do, would be a step to making the culling of our hardwood somewhat similar by each culler, we have prepared the following, which we think will be found to be in practice about what is done by most of our hardwood inspectors. The rules as given have been followed for years by many of our readers who have given particular attention to the timber growing in different parts of the country, and we fancy they are about as near right as can be applied in actual culling.

It would be a matter of considerable interest if some of the hardwood inspectors would give their views on the subject. Should a discussion be brought about and the rules herewith condemned as being too rigid, we shall be pleased to see the subject thoroughly gone into by practical cullers.

ASH.—The standard lengths are 12, 14 and 16 ft. The standard thicknesses are 1, 1¼, 1½, 2, 2½, 3, 4, and 5 inches. *Waggon tongues*—to be cut from the toughest timber and be free from all imperfections, particularly that of cross grain. Length 12 ft. 6 in. ; size 2x4 at one end by 4x4 at other, and 2½x4½ at one end and 4½ square, splits not allowable. *Firsts*—Must be not less than 12 ft. long nor under 8in. in width and at such width and length be clear. At 12 in. wide a standard knot will be admitted and no other defect. As width and length increase defects are allowable in proportion, but in no case shall defects be such as to prevent the piece from being used as a whole in the best kind of work. *Seconds*—Width not less than 7in. nor under 10ft., and at such much be clear. From 8 to 9 in. one standard knot allowed. As dimensions become greater imperfections are allowed in proportion, but five-sixths of the piece, as a whole, must be suitable for good work. Heart shake, rot, dote, wormholes and bad manufacture are excluded from Nos. 1 and 2. All lumber to be cut ⅛ in. over the required thickness and well manufactured. In black ash particular attention is directed to the annular rings, as in inferior qualities of this wood they are often detached.

BASSWOOD.—Standard lengths are 12, 14 and 16 ft. The usual thicknesses are 1, 1¼ and 1½ inches. *Firsts*—Must not be less than 7in. and free from all defects. *Seconds*—Must not be less that 5in. at this width, and up to 6in. must be clear. As width increases defects are allowed in proportion, but no piece however wide having black sap shall be taken in this grade. Sap must be bright and in good condition. Pieces having defects so numerous or of such nature as to render five-sixths, as a whole, unsuitable for first-class work must be excluded. All lumber to be well manufactured, plump thickness and free from stain.

BEECH, BIRCH, MAPLE.—Standard lenghts are 12, 14 and 16 feet. Standard thickness 1, 1¼, 1½, 2, 2½, 3, 4 and 5 inches. *Newels*—Must be free from heart and cut so as to square 5, 6, 7, 8 and 9 inches. Length to be four feet or the multiples thereof. *Balusters*—Must be cut exactly square 2, 2¼, 2½, 3, 4 inches, and on length from 28 to 32 inches, to be entirely free from all defects. *Firsts*—To be not less than 8in. wide and perfectly clear to 12 inches. At 13in. one standard knot allowable or one and one-fourth inch of sap on one edge and side, with a perfect face. Defects in proportion to width and length, but in no case shall the defects prevent the piece from being used as a whole. Sap must be bright. All pieces to be evenly sawed, square butted and square edged, plump thick-

ness when seasoned and free from taper. *Seconds*—Not less than 7in. wide and clear. At 8in. wide one small sound knot may be allowed, but no other defect. As width increases defects in proportion are admissable but not to decrease the piece below the above standard nor render five-sixths of it continuous, unavailable for good work. A short split, parallel to the edges, and not exceeding one-twelfth of the length on one end is a defect, but admissable. When sap, knots, splits and bad manufacture combine to render the waste greater than one-sixth of the piece such a piece must be rejected. Sap must be bright, knots small and sound; and the lumber entirely free from heart.

BUTTERNUT, WALNUT, CHESTNUT. — Standard lengths are 12, 14 and 16 ft. Standard thickness 1, 1¼, 1½, 2, 2½, 3, 4 and 5 inches. Balusters and newals same as in birches, Counter tops are from 12 to 18 feet long, and from 20 inches and upwards in width, strickly clear. *Firsts*—Must not be less than 8 inches in width free and clear from all defects. At 12in. wide may have one and one-half inch of sap on one side, face clear. No defects are allowable that will decrease the piece below the standard waste is not to be allowed in this quality. *Seconds*—Not less than 7in. at which width it must be clear. At 9in. wide 2 defects may be allowed and as width increases defects in proportion. Waste not to exceed one-sixth of the piece.

CHERRY.—Standard lengths are 12, 14 and 16 ft. Standard thicknesses are 1, 1¼, 1½, 2, 1½ 3, 4 and 5 inches. *Firsts*—Not to be under 8in. wide clear and free from all imperfections. According as the width increases defects are in proportion, but in no case must there be any loss in the piece. Sap when allowed must be bright. *Seconds*—Not less than 7in. and must be free of all defects. At 8in. one defect will be allowed; at 10in. wide two defects and so on as the width increases; but in no case must the loss exceed one-sixth of the piece. All pieces under 12ft. long and 7in. wide must be entirely free of knots, sap, gum specks and splits. Gum specks are excluded from firsts.

ELM, SOFT.—Standard lengths are 12, 14 and 16 ft. Standard thicknesses are 11in. and 2in. *Firsts*—Not to be less than 10in. wide at which and up to 13in. must be perfectly clear and free of all defects. Whatever defects are allowed in wide pieces must not cause any waste, must be cut plump thickness and well manufactured. *Seconds*—Not to be less than 8in. wide, and at such must be clear. At 10in. wide one defect will be allowed. Defects are not allowed in such numbers nor of such kinds as will cause any greater loss than one-sixth of the piece.

ROCK ELM. — *Firsts*—Shall be free from rot, decayed knots and open annular rings; must be cut plump thickness and well manufactured. Each piece as a whole must be free from all imperfections that would prevent it from being used in the best kind of work. Heart pieces not admitted. *Seconds*—Include all lumber which can be used without a greater waste than one-quarter. The three-quarters must be three continuous quarters.

HICKORY. — *Firsts*—Shall be not less than 7 in. wide and free of all defects. *Seconds*—To be not less than 6 in. wide, and may have a few sound knots. Not less than two-thirds of the piece must be available for good work.

OAK. — *Firsts*—Must be 8 in. and over in width, clear and free of all defects. All pieces to be evenly sawn, square butted, and square edged. What knots are admitted to be small and sound and not to exceed in size the standard, and so few as not to cause waste to the best kind of work. Pieces having worm holes are absolutely excluded. *Seconds*—Must be 7 in. wide and clear. From 8 to 10 in. will allow from 2 to 5 knots, small sound knots, of standard dimension, or a little bright sap. Two-thirds of each piece must be available for ordinary work. The standard lengths of oak are 12, 14 and 16 ft., thicknesses are 1, 1¼, 1½, 2, 2½, 3, 4, 5 and 6 inches.

QUARTERED LUMBER.—To find ready sale this lumber must be of good width and plump thickness when dry, not to be under 5 in. in width.

SPLINTERS.

THE LUMBERMAN wishes its readers A Merry Christmas.

THE mills are fast closing down for the season. The year's output on the whole has been large.

THE value of timber limits under license in Ontario is estimated at $18,500,000 and in Quebec at $23,000,000.

THE consumption of timber is said to have increased one half since 1850 and represents an annual expenditure of $1,305,000,000 throughout the world.

HON. CHARLES TUPPER, minister of marine and fisheries, has taken the initiative step in issuing an order against the deposit of sawdust in several rivers in Nova Scotia and New Brunswick.

MR. RUFUS STEPHENSON, of Chatham, has again interviewed the Minister of Finance in regard to the imposition of an export duty on hemlock logs, which are produced chiefly in Kent, Essex and Lambton counties, Ontario. Mr. Foster promised to give the matter his consideration.

HENRY F. ALBERTS is another acquisition to the little army of boodlers who are forming a colony in Canada. He hails from Buffalo where he was extensively engaged in the lumber business. He leaves behind him a large amount of debts and spurious paper. He was a forger to a large amount.

DURING 1887, at a $2 export duty, about 3,000,000 feet of pine logs were exported from Canada to the United States. The present year there has been considerable rafting of Dominion logs to American mills, and it is said that previous to the recent increase in the export duty, Michigan men had expected to raft fully 200,000,000 feet of logs from the Georgian Bay region next season.

Mr. Cassels, register of the Supreme court, recently dismissed a motion to quash the appeal in the Manitoba case of Shields vs. Leacock, involving the affairs of the Northwest Lumber Co., Mr. Dalton McCarthy, Q. C., renewed application on behalf of the respondent before Judge Fournier in chambers, but judgement was reserved. Hon. John Haggard, Postmaster-General, is a party to the litigation.

ATTENTION is directed to the advertisement of the Messrs. Northey & Co., on page 19 of the present issue. This firm is well known throughtout the Dominion as manufacturers of Steam Pumps, and they have achieved a reputation for turning out the best article of the kind in Canada. From our personal knowledge of this company we can recommend their manufacture with confidence to the lumber trade.

THE Wm. Hamilton Manufacturing Co. of Peterboro', have now completed the extensive additions to their works, mention of which was made in a former issue of this journal. But few manufacturing establishments in Canada have made such headway during the past few years as the one referred to, and their success can be attributed to the very fine class of saw mill machinery they are constantly shipping to every part of the Dominion.

IF the immense quantity of sawdust which is now deposited into the rivers and streams of this country was converted into gas, either by the use of the luntum or Swedish process or by the Siemen's regenerative furnace, we could have the best fuel possible for roasting ores and other such purposes. Under such a process sawdust can be converted into gas and used for all the purposes for which the natural gas is utilized, while the cost would be reduced to a minimum.

As will be seen by advertisement in another column the Ontario Government will put up at auction on the 11th inst. timber berth No. 2 in the township of Ballantyne, the purchaser who bid this limit in at the sale of limits in December last having failed to comply with the conditions of sale. Particulars as to locality and description, area, etc., and terms and conditions of sale will be made known on application, personally or by letter to the Crown Lands Department, Toronto.

THE day previous to the Presidental election Mr. A. M. Dodge, wholesale lumber dealer of Tonawanda, N. Y., and President of the well known Georgian Bay Lumber Co. of Canada, issued the following printed circular, which he caused to be placed in the hands of each of his employees:

> Each man in our employ is requested by us to vote at the coming election as his conscience and intelligence dictate, and in this all will be sustained by us. If any foreman or inspectors in our employ attempt to use their authority otherwise than in preformance of the work for which they are employed, a report of such conduct at our office will be appreciated. Our employes are paid by us for work performed, and not for their votes.

THE latest annual report of the Forestry Division of the United States Department of Agriculture again directs attention to the conservation of the timber wealth of the country. It points out the need of a more careful and more rational utilization of the material at hand, and of a greater regard for the production of a future crop. The natural wood crop of the country is apparently being used up faster than it replaces itself. The report enforces the conclusion regarding the forests that concerted and systematic action on the part of both the government and the people is necessary to prevent the waste of the forest wealth.

Michigan lumbermen are still investing their boodle in Canadian pine, with the expectation of being able to tow their logs across the boundary. We fear that the late move on the part of the Dominion Government in raising the export duty on logs will have a rather depressing effect on such operations. The latest investment reported has been made by the Saginaw Lumber & Salt Co. who have concluded the purchase of three timber berths on Spanish River in the Georgian Bay region, from which it is expected two hundred million feet of lumber will be cut. If they desire to make their investment a success they had better bring their mill to the timber.

OUR readers will notice in this issue the new advertisement of the Sherwood Harness Co. And in this connection we beg leave to copy [illegible] and company

SHERWOOD HARNESS CO., [illegible]

Gents.—I cannot say too much in praise of your Steel Logging Harness. The six sets bought of you last fall as an experiment have been in constant use in [illegible] great ease and comfort [illegible] tages that you can justly claim for your meritorious Harness. [illegible] no account would I use the old style again. We are now fitting up our teams for the woods and wish you to send us eight sets more. Ship same as before, and oblig

IT is said that Canadian freights have reached almost prohibitory limits. The Ashdene is stated to have been fixed Quebec to London, Leithe to Newcastle, at 85s. deals, with option of 60 or more standards timber at 95s. The West Cumberland is also reported to have been chartered for a range of ports in the U.K., for a lump sum of £2,200, the shipper paying stevedore charges. This, on a steamer of about 500 standards, works out about 90s. per standard. The Craigallion, 1,200 tons register recently discharging in London from Quebec, has been chartered at 70s. She is to proceed to St John, N. B., in ballast and load for range of good English ports.

In going through our correspondence some days ago we opened a letter from Messrs. Stanlake Bros., of Hillsdale, Ont., which contained a bank note of a denomination large enough to pay their subscription up to the year 1894. We fully appreciate the liberality of our Hillsdale friends, and trust that their example may have the effect of at least calling to the rememberance of several hundred delinquents that it would be an act of generosity on their part to pay up the old score and as far ahead as they deemed expedient. To all such we would say, drop your check into the post office and watch how quick you will get your receipt back.

EXCHANGE ECHOES.

Lumber World.

Reports from various lumber centres situated in nearly every section of the United States indicate an encouraging condition of trade. Here and there dullness is reported, but on the whole trade is fair, collections good and the outlook encouraging. The political excitement has retarded business somewhat, but the damage from that cause has been far less than was anticipated so long as the Mills bill was in existence. With the removal of that unwise and uncalled for bill from the arena, the various industries threatened by it began to improve, and the result is that the winter opens with cheerful prospects.

Chicago Timberman.

Timber cutting on Drummond Island, Spanish River and other points on Georgian bay waters will assume large proportions this winter. The output next season will approximate closely 150,000,000 feet, all of which will be brought to Michigan mills. The fact is, that irrespective of any tariff action, the work of importing Canadian timber to supply the Michigan mills will continue to grow year by year. The real opposition to this means of supply comes from interested holders of the Michigan pine, who are seeking to "bull" the market by holding on to the timber in their possession for a rise. These men naturally look upon any effort to obtain supply elsewhere as extremely unpatriotic, and when questioned they are pretty sure to be found in favor of protection. It all depends upon whose ox is gored. If the man owns pine lands he is against the removal of the tariff, first, last and all the time. If he owns a mill he wants logs and thus becomes a tariff reformer. It is really wonderful how these interests affects politics in Michigan. Nevertheless Canadian saw logs are going into Yankee lumber fast.

Toronto Empire.

Captain Peters, of Windsor, is in the city from Algoma on business connected with some of the large lumber firms who are operating along the north shore. *The Empire* had a short talk with Captain Peters on the prospect for the lumbering trade in that section of the country this winter. Everything up there is booming at the present time. Everybody appears to be busy and there is work for all who want it. Large quantities of supplies are going in for the lumbermen and the prospects were never better. While there was not a very great deal of lumber cut along the north shore last season a large quantity was shipped. Part of this was old stock, however, and the result is a clearing out of all that was cut, and the lumber to be shipped this year will have to be fresh cut. There is a brisk demand for board pine, and large stocks will be needed at Quebec to be shipped to the Old Country. The cut this year will probably be much larger than for some years past. The cut of cedar posts for paving will also be rather more than an average one. These posts mostly go to Chicago. The lumbermen along the north shore, Captain Peters says, feel most hopeful of the coming winter's work. All that he has spoken to, say they intend to cut more this winter than for some years past, and they are now actively engaged in their operations.

THE "CLIPPER" SHINGLE MACHINE.

The accompanying illustration will give the reader a very fair idea of the mechanical construction of what is known as the "Clipper" shingle machine, which is now rapidly taking its place in the best mills of this country. It is the development of a long, practical experience by the patentee, who for the past ten years has made the construction of shingle machinery a specialty.

All working parts are very durable, and possess equivalent strength for the duties they have to perform, and are very easily controled by the operator. The machine is automatic in set and feed, cuts all tips or butts from either end of bolt, or will cut a tip and butt alternately ; also runs long and short stroke. The carriage runs on rollers on a V track, thereby reducing the friction to a minimum, and is driven forward and backward by a heart-shaped cam which is driven by friction, and engages directly with back of carriage. No lost motion can be produced by wear. The feed works are placed high up on the frame of the machine, and out of the way of sawdust, which is usually a great source of trouble. The top of carriage is lifted by a foot-treadle, which enables the operator to use both hands to block the machine.

The seven trip-dogs for shortening the stroke each quicken the speed of carriage so that at the short stroke for narrow shingles the carriage will make as high as ninety strokes to the minute. The average cut per minute is about 60 ; speed of saw 1,300. A very important feature of this machine is that there is no jar on the carriage, a foot break being provided by which the carriage can be stopped in any part of the stroke. On the last stroke the jar is taken off by this treadle ; on other machines the operator has to throw his whole weight against the carriage to prevent the jar. By the use of the six ratchet wheels which accompany each machine the shingle can always be kept to a uniform thickness with either a thick or thin saw.

The average cutting capacity of this machine, with the usual run for ordinary bolts, is from 30,000 to 35,000 per day ; with good bolts 60,000 have been cut in nine hours.

For prices and all other information we would direct our readers to the manufacturer, Mr. Robert Brammer, Orillia Ont.

Do Tools Grow Tired ?

It is a common complaint among mechanics that their tools do not serve them as well some days as others.

A correspondent of the *Iron Industry Gazette* says : Tools, like men, grow tired. I have seen a first-class chisel get tired and act as though it was possessed of the King of Sheol. It would not keep its edge, and the more I sharpened it, the sooner it would lose its edge.

I called the attention of a shopmate, a grizzled old veteran, to the peculiar behaviour of the chisel. He looked it over and handed it back to me, saying : "The tool is all right, only a little tired. Lay it away and let it rest. It will come out all right again, just like a man who is tired." I did not believe the old fellow, and I really thought he was crazy to talk of a tool getting "tired," but as there was no help for it, the tool was laid away. I do not remember how long it was left to rest, but when it was again sharpened and used it appeared to hold its keenest edge as well as it did before it got tired. Barbers tell me their razors in constant use get tired in the same way, and woodchoppers say their axes sometimes seem to get soft all at once. Possibly constant and hard usage may cause changes in crystalization that would account satisfactorily for the peculiarity alluded to. Locomotive engineers often observe peculiar misbehaviour in their machines, which may possibly be the result of continued heating, friction and pounding. When a tool gets "tired," or a machine "balky," give each a rest.

A New Waterproof Belting.

The particular attention of LUMBERMAN readers is directed to the illustration on last page of this issue of Robin & Sadler's waterproof belting, which is now being introduced to the public for the first time. This belt is made in both light and heavy double leather, of the best material, fastened with waterproof cement and brass wire screws, after which the entire belt is saturated with a preparation which renders it entirely waterproof. Saw mill owners will find this new article in belting especially adapted for damp places in a saw mill. Messrs. Robin & Sadler, the manufacturers, inform us that they will send a sample of this belt to any intending purchaser on application either at their head office in Montreal, or at their Toronto branch, 129 Bay street.

THE NEWS.

ONTARIO.

—The Blind River Lumber Co. is shipping lumber and lath over the C.P.R. to the Sault.

—The steam barge Kincardine, which ran aground and sank in French river, has been raised.

—Mr. Wm. Orr, Shelburne, will build a saw mill there on the site of the mill recently destroyed by fire.

—The sawmills of Caldwell & Son, at Carleton Place, have closed down. The season's cut was 9,000,000 feet.

—The slack barrel coopers throughout Ontario are pushed with orders for barrels in which to market the present apple crop.

—Hollister & Jewett's mill at Gordon River has cut its first half million feet of lumber, which was purchased by a Chicago firm.

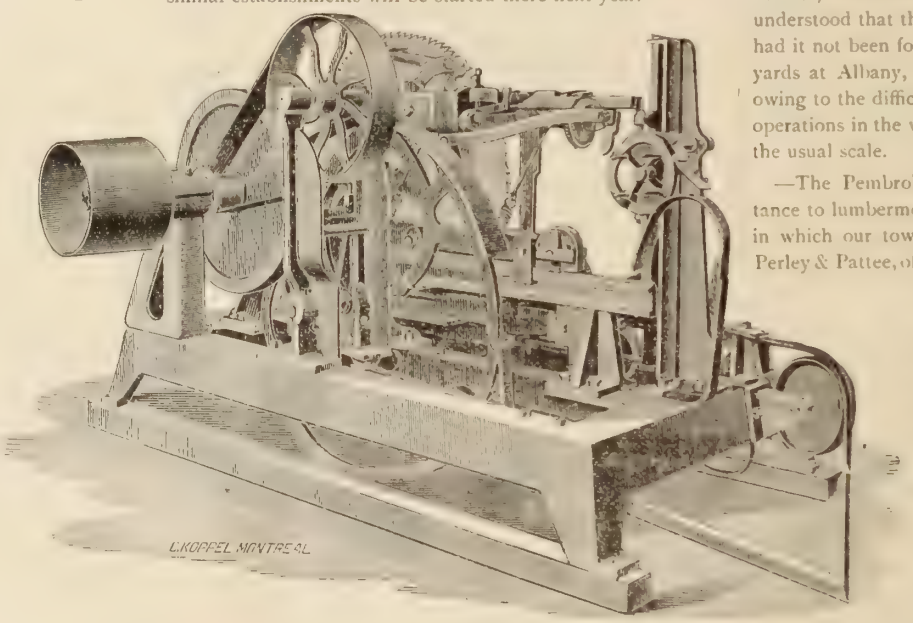
—It is estimated that 200,000,000 feet of timber, board measure, was destroyed by fire in the Muskoka and Pettewawa districts last year.

—The lumber firm of Thompson & Ellis, Fenelon Falls, has been dissolved. Mr. Ellis will continue the business alone in the future.

—The Lake of the Woods mills are being closed down for the season. Men are in demand for the woods, at $28 to $30 per month and board.

—A new steamer will be built at Keewatin this winter, for the Lake of the Woods trade, which is mainly in connection with the lumber industry.

—The paper pulp factory of Brophy & Co., at the Chaudiere, is working at full capacity. It is stated that two or three more similar establishments will be started there next year.



THE "CLIPPER" SHINGLE MACHINE.

—Hall Bros. & Brown have commenced the erection of a saw mill at Keewatin, which they expect to have ready for operation early next spring.

—A new mill to replace the one recently burned at Glen Lewis is being constructed, and Mr. Hungford expects to have it ready for cutting operations next spring.

—McClellan & Goodmurphy's new saw mill on the Lake Huron shore, township of Burpee, is now rebuilt on the site of the old one and will be running in a few days.

—The lumber firm, of which Mr. F. E. Boswell, of Boswell Mills, (Spanish River district) is the head, shipped over 3,500,000 feet of lumber to the Chicago market this season.

—Carpenter's mill on the Kaministiquia, Thunder Bay district, has had a prosperous season. He will have a large force of loggers at work in the woods during the winter.

—Thompson, Tassart & Co., owners of a large saw mill at Teeswater, require better facilities for the purposes of their business and threaten to abandon the place unless they obtain them.

—O'Brien & Lequier cut 3,000,000 shingle for Graham, Horne & Co., of Port Arthur, this season. Formerly all the shingles used in the district were imported from across the lake.

—An assignment has been made by W. & W. Addison, sash and door manufacturers, of Hamilton. The liabilities are nearly all to local firms, and a meeting of creditors has been called to consider the position of affairs.

—The break in the Cornwall canal has proved a serious matter to lumber forwarders. A great number of barges, loaded with lumber were tied up at Prescott, and were compelled to remain there until the break was repaired.

—The Algoma *Advocate* thinks that Thessalon should have another saw mill, and that all the timber that is being cut in that vicinity should be manufactured there, in order that the village might get the benefit. The *Advocate* is right.

—Messrs. Charles Scott & Co., of Philadelphia Pa., will probably establish an extensive hub and spoke factory at Port Colborne, in the vicinity of which place are large quantities of elm timber especially adapted to the manufacture of such goods.

—The lumber exported from Ottawa to Liverpool is purchased principally by the following Quebec houses, viz.: Smith, Wade & Co., I. Burstall & Co., Pierce & Co., R. R. Dobell & Co., and Sharples & Co. It is delivered at Montreal, where it is loaded on to the ocean vessels from Canal boats or cars.

—At a meeting of the creditors of the Michael's Bay Lumber Co., held at Toronto last month, a statement of the liabilities and assets was given, showing that the debts amounted to about $100,000 and the assets $80,000. Both the Central and Imperial Bank are secured for their respective claims, the former being for $40,000 and the latter for $20,000.

—The Victoria Harbor Lumber Co., Alex. Fraser and Chas. J. Smith, have received contracts from the Canadian Pacific railway for supplying all the lumber required for the construction of the new Toronto Esplanade. The amount of the lumber for this work will be very large. The Leycock Lumber Co., of Buffalo and Gravenhurst, Ferguson Bros., of London, and Messrs. Fraser & McGann, of Toronto, have received contracts for the supply of lumber for the construction of trestle work, etc., on the C.P.R. line west of London.

—Messrs. M. Boyd & Co., the old-time lumbermen of Bobcaygeon, have already shipped this year 18,000,000 feet of lumber, besides large quantities of lath, pickets, etc. It is understood that their shipments would have been much larger had it not been for a scarcity of shipping facilities. The firm's yards at Albany, N. Y., have at times been almost depleted owing to the difficulty in shipping lumber to that point. Their operations in the woods this winter will be conducted on about the usual scale.

—The Pembroke *Standard* says : A case of some importance to lumbermen was tried at the Ottawa Assizes recently, in which our townsman, Mr. A. McCormack, sued Messrs. Perley & Pattee, of Ottawa. The action was to recover commission for the sale of a timber limit on the Du Moine river. $5,000 was claimed as commission for negotiating the purchase of the limit from the Quebec bank, the price of the limit being $80,000. Later on it seems that defendants would not take the limit owing to the increase of timber dues made by the Quebec government. The defendants afterwards negotiated for the purchase of the limit for $80,000 without the knowledge of the plaintiff. The case was tried before Hon. Justice Street without a jury, and considerable interest was taken in it by the lumbermen of the district. The Judge in giving his decision said that he considered some sort of a bargain had been made with reference to the commission, and he thought the plaintiff was entitled to some commission and he awarded him $2,500 and costs. Dalton McCarthy, Q. C., and J. H. Burritt, Pembroke, appeared for the plaintiff, and A. J. Christie, Q. C., and Thomas Deacon, Q. C., Pembroke, for defendants.

—The amount of three inch deals annually manufactured at Ottawa is estimated at about 100,000,000 feet, made up as follows : J. R. Booth, 30,000,000 ; Eddy Manufacturing Co., 20,000,000 ; Hamilton Bros. 15,000,000 ; Perley & Pattee, 10,000,000 ; Pierce & Co., 5,000,000 ; other firms, 20,000,000. The greater part of the stock finds a ready market in England, the Bronson & Weston Co. being the only large firm which manufactures exclusively for the American market.

—An exchange, speaking on lumbering in the Ottawa valley, says that although the present yards are overcrowded, it will not be for long, as the Canada Atlantic Railway and the firms of J. R. Booth and Perley & Pattee have workmen engaged laying tracks in the new yards of the latter, on the line of that road, a little over a mile from the mills. This railway has been extended almost into the heart of the lumber district, the station being but a few hundred yards from the mills of the two firms above mentioned, Bronson & Weston Lumber Co., and Pierce & Co., at well as Barnes & Co's box shook factory. Therefore a great saving is expected, as the lumber is taken almost directly from the saw to the yards by rail, much cheaper than by ordinary wagons, and when dry, it can be shipped directly to his destination, and another advantage, the ground, being high and open, it is expected that the lumber will season quicker than in the overcrowded vicinity of the mills. But for this extension most of the mills would have been obliged to shut down long ago for want of piling room.

—Messrs. R. Cox & Co., of Liverpool have purchased next season's cut of pine deals from Perley & Pattee, of Ottawa.

—The Canada Atlantic railway seems to be carrying far more lumber from Ottawa this year than any other road. As many as one hundred cars in a day have been shipped by this line.

—There will be an unusually large output of logs this winter in the up river shanties, providing the snowfall is favorable. This season will see a larger number of men logging up the Ottawa river and tributaries than any season before.

—The colonization road between North Bay and Lake Temiscamingue has been extended to opposite the Hudson Bay fort on the lake a distance of some 68 miles. This means increased facilities for lumbermen getting in men and supplies to their limits between the two points.

—A correspondent from Wahnapitae writes to the LUMBERMAN as follows: The weather for the past month has been very unfavorable in this district and has retarded work considerably in the lumber woods. Alex. Fraser, of Westmeath has a mill erected on his limit west of Sudbury in which he intends cutting dimension timber. McCormack & Son, of Sudbury, have a mill in operation there which has been running steadily all summer, and they intend to move it back on their limit about three miles from Sudbury and will cut all winter. They will haul their logs direct to their mill. The Georgian Bay Lumber Co. are doing less this season on their Wahnapitae limits than last. The Emery Lumber Co's cut will be about the same as last year.

—J. B. McKay, a lumber measurer, formerly in the employ of Flatt & Bradley of Hamilton, and lately employed by John D. Lebel, of London, recently requested a resident of Paisley to endorse a draft on Lebel for $45 which was cashed at the Western Bank. McKay said he was going to load a car of lumber at Harriston. He afterwards went to a second gentleman and said he was short of funds and would return here Tuesday to load lumber and that he wished to get a draft for $35 on Lebel cashed and requested the second gentleman to endorse this draft which was cashed at Porteous & Saunders' bank. McKay told his second victim that he was going to Milverton to load there. McKay is now missing and Mr. Lebel refused payment of the drafts. McKay is probably on the American side of the line.

—At a recent meeting of the ratepayers of the village of Teeswater, convened for the purpose of enquiring into the shipping facilities, etc., of the place, the following facts of interest to LUMBERMAN readers were brought out:—That Thompson, Fessant & Co. pay yearly freight on 250 cars at an average rate of $25 per car, being a total of $6,250, besides way freights; they have at present an order for 80 cars of maple for Liverpool, Eng.; the freight to the C.P.R. on this shipment alone will amount to nearly $5,000. Mr. F. Deutschman, lumber dealer, has shipped this year 600,000 feet of lumber, or about 75 carloads, and has 140,000 feet more to ship, the freight on which would amount to about $2,400. Besides these large shipments there are three flouring mills, foundry, cabinet factory, woollen mill, etc., whose shipments must be considerable.

—The product of square timber on timber limits on the Ottawa valley is likely to be large during the coming winter though the wet season may retard operations. It is estimated that 5,500,000 cubic feet of white pine, and 800,000 feet of red pine square timber making 6,200,000 feet in all will be taken to market next season. Advices from the regions north and west of lake Nippissing are to the effect that this has been the worst fall experienced in the woods for many years. Owing to the heavy rains in October the swamps are filled with water which makes the work for skidding teams very difficult. The roads over which camp supplies are usually forwarded are now almost impassable. Large gangs of men are, however, located on the limits. Messrs. Edward Moore, R. H. Klock & Co., Alexander Fraser, Booth & Hale, Barnett & McKay and the Hawkesbury Lumber Company are going heavily into square timber making, and a considerable quantity has been contracted for. The high prices ruling during the past season have proved an incentive to increased operations. The cut of last winter did not exceed 4,500,000 feet, so that an increase of nearly fifty per cent. in the output is anticipated.

QUEBEC.

—Messrs. Henry Lovell & Sons are building a steam clapboard mill at Coaticook.

—The lumber yard belonging to Mr. Roberts, of Montreal, was destroyed by fire during the past month.

—Messrs. Hall & Price have sold the cut of their Three Rivers mills, about 8,000,000 feet spruce, for the American market.

—The weather during the past month has favored the vessels at Quebec to get a fair despatch for this season of the year, consequently but few vessels now remain in port.

—The sale of Baptist's Three Rivers deals to Messrs. John Burstall & Co., is reported. Prices are stated to be $112, $77, $37 and $27 for 1sts, 2nds, 3rds and 4ths respectively.

—Messrs. R. R. Dobell & Co., of Quebec, are reported to have purchased next season's cut of spruce deals of the Montgomery mills, and also Baptist's wintering pine and spruce deals at Calumet.

—By the burning of his extensive saw mill and lumber yard at Montreal the latter part of October, Mr. McFarlane will lose about $30,000. In addition to a complete outfit of new machinery 50,000 feet of lumber was burned.

—As compared with 1886 the quantity of white pine timber measured and culled at Quebec to November 10, fell off from 3,032,738 to 1,661,884 feet, but as compared with 1887, an increase of 493,741 feet.

—Lumber freights from Quebec to American ports during the past month have remained steady with tonnage in fair demand. From Quebec to Burlington $1.40 a thousand feet; to Whitehall $1.66; to New York $2.75; to Troy $2.75.

—A Montreal purchaser at the recent timber limit sale by the Provincial government, refused on the spot a bonus of $3,000 on a portion only of his purchase. The proceeds of this sale averaged $20 per mile more than the sale of 1885.

—It is understood the contemplated deal between the Eddy Manufacturing Co., and R. Hurdman & Co., of Hull, for the Maganicippi limits, has fallen through, one of the reasons given being that certain parties interested with the Hurdman's in the limits refused to sell at the price agreed upon.

—The local demand for lumber in Montreal fell off considerably the last month, owing principally to unfavorable weather and the bad condition of the country roads. The prospects do not look encouraging, contractors being almost at a standstill. Prices have ruled steady all round.

—It was confidently expected that the Cornwall Canal would be again open for traffic the early part of November, but unfortunately a crack was discovered in the bank where the old break occurred, and now the chances are that the boats will not get through this fall. This will be bad news for forwarders, as fully a million dollars worth of goods is locked up on the other side of the break.

—In April last an order-in-council was passed by the Quebec government wherein it is provided that the rates of ground rents and of duties on timber cut shall not be increased till 1st September, 1900, reserving, however, the right to change the table required to be used in acertaining the contents, board measure, of saw logs, etc. This information appeared for the first time in the statutes for the last session recently issued.

—Lumbering operations are expected to be very active in Saguenay county this winter. Very advantageous arrangements have been made by contractors and wages are higher than usual. X. Brassard will operate on the river Cyriac, Joseph Brassard on the river Pickauba, and Ed. Lemieux has signed a contract with Price Bros. to get out 40,000 logs on the river Blanche. At St. Etienne H. P. Blair hopes to cut between 200,000 and 300,000 logs. The cut of Chantiers, of Bersimes & Sault au Cochon, will be considerably more than in past years, while at Lake St. John the new saw mill of B. A. Scott has given an impetus to lumbering operations in the vicinity.

—Mr. W. F. Hutchinson, Sherbrooke, has recently invented and patented some simple but effective machinery by which he can manufacture 60,000 wooden tooth-picks per hour. He has established a factory in Sherbrooke and will engage extensively in the business. To supply the millions of tooth-picks used every year, ingenious machines of great productive power have been invented. Like all other occupations the tooth-pick business has its combination, but a Maine inventor has set out to break it with a machine that makes 6,000,000 picks a day, and he is making a machine that will produce 72,000,000 a day. Green, clear, straight-grained birch and maple wood is used, and after steaming for several hours it is easily cut into veneers or thin strips of wood with the grain running across. These veneers are pliable and are wound upon large spools, a hundred feet on each, and from the spools they are fed into the pick machine, which cuts them into picks with wonderful rapidity.

NOVA SCOTIA.

—The law requiring saw mill owners to prevent saw dust from entering the streams is causing much comment among mill men in Nova Scotia. It is stated that as most of the mills in Nova Scotia are direct action, there will be waste in any attempt to stop the sawdust, and the effect must be to curtail the business. A stoppage of business has taken place until an understanding can be arrived at in the matter.

Mr. Leary, the New York builder of rafts at J[illegible] takes issue with the Dominion government upon its position that $1 a thousand should be charged on the timber entering into rafts which are sent out of Canada, to protect the shipping and labor interests. His claim is that out of the $48,000 which the raft cost that successfully reached New York [illegible] $38,000 were expended in Nova Scotia for timber, materials, labor, etc., the benefit to Canada by that expense being much greater than would have resulted had the timber [illegible] ped by vessel.

NEW BRUNSWICK.

—Word from the lumber district [illegible] ter's operations will be commenced on a scale much larger than usual. Wages to axemen on the north shore are [illegible] twenty-five per cent. higher than [illegible]

—It is estimated that St. John alone has shipped the first eight months of this year at least 200,000,000 deals, while [illegible] output from other New Brunswick ports has been [illegible] large. The timber shipment has been on a proportionate scale.

MANITOBA AND THE NORTH-WEST.

—Hugh McDougall is opening a lumber yard at Moose Jaw, Assa.

—A large number of men are engaged in the forests at the Riding mountains taking out saw logs.

—All the lumber is in from Lake Winnipeg, and the boats are going into winter quarters at Selkirk.

—Hamilton & Badgley, lumberers, Emerson, are disposing of their business to McDonald & Muller.

—The engine and machinery for a grist and saw mill at Duck Lake, Sask., has been shipped from the east.

—E. M. Gatliff, lumber, Emerson, has admitted a Mr. Adams into partnership, and is opening a branch at St. [illegible] Baptiste.

—There is talk at Selkirk of the formation of a company to operate the large saw mill at that place. The mill has been idle for some years.

—An exchange chronicles the fact that a lumberman on Lake Winnipeg has decamped. Here the information ends, however, and we are in ignorance of who the decamping party is.

—The mills are now all about closed down for the winter, after a very successful season. Business is now slackening up. Stocks on hand are not large for this time of year, and in lath and shingles there is said to be a shortage. Prices are firm but last quotations hold for the present.

BRITISH COLUMBIA.

—J. Curtis, of Michigan, has lately been prospecting in British Columbia, with a view to engaging in lumbering in that province.

Fader Bros'. new mill at Vancouver is being pushed towards completion. The capacity of the mill will be about 100,000 feet per day.

—The *News-Advertiser* announces a new lumbering firm in Vancouver, viz., Anderson & Grady, composed of John Anderson, late of Pembroke, and Mr. C. Grady, of the first named place. They intend to erect a saw mill on the Inlet, with a capacity from 70 to 80 thousand feet of lumber per day. The machinery for it, made by the Wm. Hamilton Manufacturing Co., Peterborough, is on the way.

—Fred Robinson, of the Beaver saw mill, near Donald, B. C., has stopped sawing for the season. He turned out 2,500,000 feet of lumber, says Donald *Truth*, finding a market for about half of it. The other half is piled up in the yard, where it is likely to remain until next season, as the C.P.R. will not make a rate to points east of Regina that will leave him a profit.

AMERICAN.

—The total cut of the La Crosse, Wis., lumber mills, the past year was 210,700,000 feet.

—It is stated that there are single trees in Humboldt county, California, that yield 50,000 feet and acres that yield a million feet of lumber.

—Pronounced satisfaction is expressed with the outcome of the recent election in lumber circles in the Puget Sound district, where free trade was more feared than anywhere else. It is little more than an imaginary line which divides the pine in Canadian territory from that in Washington territory.

—It is stated that several lumbermen of Duluth have voluntarily increased the wages of their employees 25 cents a day on the strength of Harrison's election as President. They realize that the Mills Bill which was intended to put lumber on the free list is now a dead letter and they are accordingly greatly rejoiced thereat.

PART II.

HARDWOOD LUMBER AND ITS MANUFACTURE.

BY ANSON A. GARD.

IF the manufacturer of hardwood lumber would pay the same attention to his business as the pine man does to his, there would be less dissatisfaction about the inspection of his lumber. If he learned the requirements of this or any other market he would know that to please he must send his product in in good condition. There are too many sawyers of Hardwood who have merely "picked up" the "trade" the result is that many a No. 1 log, which if handled as a Pine sawyer would handle it would turn out valuable lumber, but instead it is not sawed with judgment and the result is one-half its value is gone, and even the good is not extra. To know how to properly put a "carriage" on its foundation so that it will run true; to know how to set a saw with just enough "set" to cut smooth, even lumber; to know how to put a log on the carriage to cut as few "heart" boards as possible; to know when to "turn" a log—in short, to know how to get the best results out of logs is not in the power of him who has merely "picked up" his trade, and the sooner this is learned by the manufacturer of valuable lumber, the better for the credit side of his bank account.

The prevailing custom of paying a stated price per thousand feet for sawing is another cause of much poorly sawed lumber. The sawyer must know his business thoroughly, but to work up to his knowledge may require more extra time than he is willing to devote to "the other man's" interests, and the result is he does a good day's work in the number of feet he has sawed, but the man for whom the work was done doubly pays for it. How much better it would be for both mill owner and the man who is having the work done could they agree on a stated price per hour. It may seem a broad assertion, but I venture to say that by this arrangement the man for whom the sawing is done—providing the logs sawed be valuable timber—will gain enough to pay for the whole day's sawbill, as by this plan the sawyer can see advantages to be taken of a log which never would have occurred to him if quantity instead of quality were taken into consideration. The mill owner who saws his own logs need not be told that care must be taken, and yet many will "butcher" their own timber as though they were not sawing money out of their own pockets every hour they run their mills. These are the men who want the lumber buyers from the large markets to pay them the same price that the careful sawyer gets for his product, and will think they have not been fairly dealt with if they are made to pay for their own mistake.

I have tried many ways for getting the most good lumber out of logs, and find this is best: first take off a slab, turn the slab side down upon the carriage and saw the log through past the heart until you get a clear face if the log be a good one, then turn it over against the head blocks and saw until you have a wide clear face, which may leave a plank two, three or four inches thick, owing to the size of the log. Then take the sawed boards or plank and after running the head blocks back 24 or more inches, place the boards or planks, whichever you have sawed, so that the saw will edge them properly. To determine just where the saw will come may be done by "sighting," or better still by the man at either block using a two foot measure, which placed across the board, back to the block, will show how far out to place it (the board); treat the other edge the same way and if the heart runs straight enough not to cut away too much lumber saw it out. A better way to edge lumber, but requiring extra machinery, is to have attached to the mill an edging saw bench. In this way the lumber can be edged as fast as the log is sawed and where a mill can be so provided the result will show that it pays well.

Of course where the logs are poor so much care is not necessary, but one thing I have paid dearly to learn and that is, no log can be too poor to neglect to saw full thickness.

Thousands of dollars have been lost in not urging upon the sawyer the great importance of sawing full. There is a double loss in thin lumber. It drops one grade if inch, and will often be refused altogether, while on the other hand, if a carload of lumber is plump, but really a little inferior, its thickness will often sell it, so that a manufacturer cannot urge too emphatically upon his sawyer to be liberal in thickness. A stout 1-16 for ⅝ and 1 inch and a scant ⅛ for inch and a quarter and inch and a half, and full ⅛ for two inch; for three and four inch 3-16 is not too much; better be too thick than too thin.

A careless sawyer will often allow his log to "cant" out, making one edge of the board plump while the other edge may lack just enough to spoil the board for the grade into which its quality would place it. This same result more often occurs from the carriage not being properly set in place or again the saw may heat and "run." A good sawyer will see that everything is kept in perfect order and stop at once to adjust his mill at the first mis-cut board.

Not a mill man in the country but who can tell (?) just how to properly stick lumber, and when to stick it, and yet when the lumber is marketed it shows that some of the many have made a grave mistake, especially so in the case of Poplar, and other light colored lumber. In sawing Poplar, when it is green with sap, it should be stuck up at once, as if left piled together it will "sap color" in a few hours. "Haven't time" will not answer! If you care to get the full value of your lumber, you *must* stick it up as fast as sawed. This is true of Oak, and in fact of all lumber affected by sap. Lumber manufacturers often wonder why their stock is not as bright and nice as some they have seen. If these same men continue to saw their lumber and pile it close together and leave it until they have *time* to stick it up, then I can assure them they will spend the rest of their days wondering. This should be the order in importance with them, first how to keep the lumber bright, then next how to saw it properly. Use narrow strips, and under no circumstances may they be green, as they will most certainly color the wood wherever they touch and if left too long will rot it. If you have no dry sticks and are on a railway line, buy a carload and run them to your mill; it will be money well spent, and the first sawing you do let it be on a good supply of sticking lath, which will soon be dry enough to use.

Walnut should be piled together as soon as sawed and will receive no injury if not stuck up for some time after sawing. The sap seems to dry out faster when finally the lumber is put on sticks than if stuck right from the saw.

If you have plenty mill yard room pile your lumber thus: Set the piling blocks at least a foot from the ground and with sufficient fall to let the rain run off readily when the pile is finished and covered. Begin by laying the first course with the boards say 6 inches apart if wide and the narrow ones put two together, and build the pile in this order, so that when finished the spaces started in the first course will run to the top of the pile. The openings will be so many chimneys, drying out the lumber more in one month than in three months the old way. Start the next pile at least twenty inches away and so continue covering your yard and you will be surprised how soon you can begin shipping dry lumber. One point more in the sticking of lumber in which there are sappy boards; instead of placing these boards away in the centre of the pile they should be put on the outside as far as possible, so that they will get the more air, and again, these boards should be laid with the sap side down. It may seem useless advice, but a glance into the mill yards of some of the smaller mill owners will show that they may well be told to stick each length lumber together.

No mill is complete without an "evener." It pays for itself many times over, as where each board in a car comes into market exactly even length, it is no trouble to find a buyer. The enterprising mill man is finding this out to his profit.

When you have cut your logs good lengths, carefully sawed them into even lumber, and properly stuck it up and have it ready for shipping; you have then only reached that point where you will begin receiving a return for your labors. If you have done your work well, your returns will show it, as good lumber is always in demand. But if you have allowed your logs to be run to the mill with no care about square ends, and have had them sawed in a careless manner, or if after having used all precautions up to this point to get good lumber, you fail to care for it properly after it leaves the saw, then your returns will show it. Poor stock requires a special sale for every car, while one car of good lumber only opens the way for as many as the buyer may need.

If you ship your lumber "all rail," load it with even ends showing, so that a good impression is given when the car is opened, as many a buyer will judge the lumber by the way it is loaded, on the principle that one who will load a car in a careless manner will also manufacture the same way. Unless so ordered, a car should not contain mixed lengths, *i. e.*, 10, 12, 14 and 16 feet, all thrown in together, as so many shippers are wont to load it. If different lengths must be shipped, load each one by itself and not promiscuously. It looks better and will sell far more readily.

Don't write to your consignee and say, "I've just shipped you a car of lumber." Tell him what you have sent as nearly as possible. Say: "I have loaded a car of [give the kind] lumber for you, containing the following." Then give number of feet, number of pieces, thickness, length, how well seasoned, and any general remarks you may think will aid the seller in describing the lumber to a customer. If the stock is at all desirable, it will be sold by the time it arrives, and can be ordered at once direct to its destination, with no demurrage or storage charges to eat into the profits. To merely say, "I've sent you some lumber," or, worse still not to say anything about it, the consignee really knows nothing until he sees the stock, and must find a place for it, after it arrives, requiring so much time that very often it will have to be stored, which means that you have either bought your lumber at a very low price or that you and the profits are to remain strangers.

It may be some trouble to select the grades, but it will pay you to do so. One car of "log run" Poplar or Walnut will require more time to sell than it will take to dispose of ten, of all one grade lumber; beside this it will cost far more money to handle it, as it must be carted to as many different places as there are grades in the car. The above will apply as well to thicknesses, as only one thickness should be sent in the same car. While five men may want a car of inch lumber, it will be hard to find one who will care for a car with three or four thicknesses; especially is this true of Poplar.

If mill men would be held close to their contracts, the above advice would be but useless words. The men to whom this does not apply need not take it to themselves, as I only wish to talk to the mill man who will positively agree to fill a specific order at a stated time, and when he finds it inconvenient to furnish the stock, quietly drops it, as though he had not given his word to furnish it. He forgets that the other man, especially if he should be a novice, may have in turn sold the order to arrive at a stated time, and not being able to furnish it, must pay for any loss occasioned by not filling the contract. Do what you agree to do. It may cost you money the first deal, but you will be placed on the list of "square men," and you can always drive a better bargain for it, as you can be counted upon and your trade will be sought after.

Many of my readers are located where they can have a choice of the roads over which to send their lumber to market. It is not always the one with the most agreeable agent at the point of shipment who should get the patronage. It is the road that will aim to give you full value for your money, and be willing to promptly adjust an error when one has been made, and not tire you out by a species of red tape calculated to discourage you from ever again trying to get back what it has taken from your profits. Again, choose the road that will handle your lumber in lightering as though it were of value, and not to be thrown about and split by careless handling.

All shippers should see that the agent writes across the bill lading "lighterage free," as most roads now will give free lighterage where it is so written across the bill. Otherwise there is an extra charge of 3 to 4½ cents per hundred pounds.

In these papers I may have said many things which would seem to be unnecessary, but there is not an absurd line in all the number, as each one will fit into some particular instance. To those who already know the requirements of this and other particular markets—and all markets are each year calling for better manufactured Hardwood lumber—I do not ask to take my advice to themselves as I have been talking to that mill man who blindly works on year after year, wondering why he don't succeed. I want him to stop wondering and do his work better—do it as the successful competitor does his. It may require more care, but his bank account will show that he has stopped working for nothing.

EFFECTS OF FOREST DENUDATION.

Whatever may be the truth or the state of opinion on the question of how much the cutting of the timber of a country affects the rainfall, there is no question as to the fact that the denuding of our hill-sides and mountains seriously affects the permanency of the streams and lakes, and produces floods and drouths to a far greater extent than before the cutting of the forests. All experience proves that serious climatic changes are to be noticed over extensive sections of country where the forests have been removed. It is as equally true that the planting of large number of trees over hill-sides and on heretofore barren slopes has brought about important and permanent changes. The absence or presence of trees in large numbers over any great extent of country is as a natural rule accompanied by absence or presence of water.

History shows that large tracts of country that were once prosperous and fertile have become desolate and barren by the destruction of the forests, and, in at least one instance within our own knowledge, in one of the Pacific islands a large sugar plantation was made a successful venture by the planting and growth of a tract of timber adjacent to and partially surrounding it. The reason of this is evident to any one who thinks or studies the process of nature. The verdure of the trees, the decaying leaves, and the shade induce and retain the moisture, and the rains of summer and the snows of winter are held until they penetrate the ground and slowly seep away, preserving a uniform and steady flow of the spring and streams, while the barren surface, hardened by exposure to the sun and with nothing to retain the rains, allows them to flow away as fast as they fall. There is no mystery or scientific wonder about this; it is mere common sense, and result of cause and

effect. In many, in fact, in most civilized countries, the Government, at least in a measure, takes this matter in hand, and enforces strict rules concerning the disforesting of the soil. The nearer that mankind in its work leaves the country in its natural condition, the better for all interested.

Attempts have been made in this country by associations,

twenty. But it is proper to state that while in most other directions there has been a loosening of the hold of government on private affairs, and a tendency toward non-interference in the ordinary things of every-day life and of the old strict and oppressive police regulations, in the matter of forest management the necessity of some form of strict supervision, and of stopping the indiscriminate cutting of timber, has become so apparent that the matter of governmental care and interference has become an acknowledged fact, and steps are being taken to enforce a more economical system.

Hitherto, the most of the European countries, private individuals have been permitted to enjoy their forest property without any government interference. "Communities, villages, towns, and cities and 'eternal' corporations, like churches, colleges, etc., very often own large tracts of forest land as common property. Over these the State, in many cases, exercises supervisory powers, with a view of preventing the waste or depreciation of this common property, acting *quasi* as guardian or trustee, as in other corporated interests. Wherever supervision of private forest property is exercised, it is almost always done only after full demonstration that the common welfare—the interest of the many against the few—demand it, and full indemnification for damage sustained is given in every case." "All European governments, without exception, have felt themselves in duty bound to encourage and aid proper forest management and all efforts at reforestation. This is done :

"By setting a good example in the management of the forests belonging to the State.

"By offering an opportunity of acquiring the necessary knowledge in forest schools, and encouraging the employment of trained foresters.

"By aiding and encouraging reforestation, when it appears necessary, with active financial aid."

The experiment of a bounty system, or exemption from taxation as a reward, has been tried only in France, and there, as in some of our Western prairie States, it has proved a failure, while the plan of giving plants at a nominal cost, with the added advice and suggestions of forestry officers, as well as the wise expenditure of money in reforesting, has given practical and valuable results. These facts are in contradiction to our ideas of European government forestry, but they seem to be well authenticated and official. The plan of planting and preserving what are called protective forests—that is, those not merely for a future supply of fuel or lumber, but combining therewith the forest influence on climate and product—is becoming a settled and practical one, both with private citizens and with the government, and each are becoming active in promoting this. The mere idea of preserving fuel and timber is in every instance made subservient to that of protection against damage by flood and drought, and the prevention of harmful climatic changes. This appears to be the European reason for forest preservation and growth, and it would seem that what was the right course there could not be wrong or harmful here. We invite discussion of, and cor[illegible] concerning this matter, which is of interest to all our people. *Southern Lumberman.*

CANADA AS A WOOD-PULP CENTER.

The agent to the minister of agriculture, Ottawa, Dr. Otto Hahn, located at Reuthugen, Germany, has sent over to his department a report on German pulp manufacture from wood. The report includes a letter from a director of one of the largest paper mills in Germany, which is as follows :

"The accompanying are samples of a new fiber material which as now prepared in enormous quantities, is bound to have an immense influence on the paper making industry. There are factories which turn out as much as fifty tons of it a day. The invention was covered with a patent until recently, and the inventor has made a large fortune out of royalties. The imperial law courts have now caused the patent rights to be cancelled, as the process appears to have been revealed to Professor Mitscherlich by a Scotchman. It has occurred to me that Canada is destined to turn to account its vast resources of forests, and of sulphur, which latter exists so largely in the deposits of pyrities, in connection with the manufacture of paper for the continental or even the international requirements. If our existing supply of wood were to be devoted to the paper industry, it would soon be exhausted, and prices would rise very much. With the profits to be derived from Canada's forest resources in this direction, the railway debt could easily be paid off, and settlers, instead of burning the pine and fir, might obtain a substantial return for that which they are compelled to destroy. If the idea I have thrown out should meet with any support in Canada, I should be prepared, with my friend, to arrange for the promotion of a company in Germany for the utilization in a large way of Canadian wood fiber.

Canada, with its abundance of vast pine woods and clear water, the discharge of which is in our country objected to, alone has the possibility of meeting the wants of the world for this new branch of industry. Suppose the yearly produce of paper to amount to 2,400,000 of tons, and half of this weight, say 1,200,000 of tons, to be made of wood pulp, and, further, that each ton of finished paper requires three tons of wood pulp, then the total consumption of paper demands 3,600,000 of tons of pine wood. But Canada furnishes besides the wood still other important additional materials for the manufacturer ; for instance, coal for firing, and common iron pyrites for distilling the sulphuric acid. Canada possesses all these raw materials in the vicinity of its shipping ports. The freight from Canada to Europe can, therefore, not come into consideration against these enormous advantages. But till now a great part of wood adapted for paper manufacture is simply burnt in Canada. Let us suppose that Canada is able to furnish only half of these 3,600,000 tons, say about 1,800,000 tons every year, and let us further calculate the ton of pine wood at 100 to 120 marks, as it will cost in Germany, we obtain for Canada a gross receipt of 198,000,000 of marks, from which the freight expenses are to be deducted. But even these expenses remain again in Canada for the benefit of either its inland economy, or of its equipment. The author thinks it his urgent duty to call the attention of the government to this favorable opportunity of so immensely increasing the receipts as well of the government, which has the sole right on all the wood on its land, as of private persons. The writer now proposes that your government should take this matter in hand and make arrangements for the manufacture of pine wood pulp whereby Canada may also retain the profits from this work.

The European production suffers everywhere from two facts. (1) From the high prices of the wood, which will more and more increase in consequence of this industry. (2) From the difficulties of establishment, the necessary water not being at disposal, neither in sufficient quantity nor clearness ; and finally, what is worst of all, that no favorable discharge is to be had, because the drainage of the waste water into the rivers is not permitted on account of the fishing, waterworks, and so on. I submit now to your government samples of (1) bleached pulp, (2) of raw paper pulp, (3) of raw paper pulp bleached and dried. The latter cost 40 marks per 100 kilograms. By personal observation made with one of the first engineers in the German paper trade, I am willing and able to give the necessary instruction for the establishment of cellulose manufacture, and also to make arrangements for the sale of the finished pulp in Europe, and are waiting for corresponding directions. The ultilization of the material increases every day, and the price per hundredweight is now about 15 marks. Imagine the number of hundredweights that Canada's forests would furnish. If war does not break out in the meantime, I shall send my son to Canada in the course of the present year to investigate the matter more thoroughly."

—A Port Arthur paper says that the reason lumber is being imported from the U. S. into that district, is that many of the best timber limits are held by speculators who have not the capital to work them. This looks very much as if the government had been doing it up handsomely to some of its political heelers.

HINTS TO PLANING MILL OPERATORS.

The care and management of wood-working machinery is a subject that can always be profitably discussed. Much has been said upon this subject and yet much remains to be said. It is one of the most important duties of the designers and manufacturers of this class of machinery, and one that should not be neglected, to so apportion every wearing part of the machine that the surfaces in contact with each be in proportion to the weight and velocity, so that there will be no danger to those parts from heat and abrasion.

The conveniences for the proper lubrication of such parts cannot be too carefully taken into consideration. Many places it is true are to be found where a bearing is necessarily so located that it is difficult to get at it with the usual appliances for oiling, but in all such places by a careful calculation in the first instance, they may be rendered more accessible than they frequently are. A small shallow oil hole in such a place, especially if the bearing has considerable length, will be condemned as a nuisance by any sensible operator who is disposed to keep this machine in good working order. There are but very few places where an oil cup of some kind cannot be applied, but if the space occupied is so small that one cup cannot be used, a hub should be cast upon the box large enough to admit a good sized hole being drilled into it, at least part of the way through, to form a suitable receptacle for the oil, and this should be provided with a cover, if one can be applied, and packed full of cotton waste, sponge or some other fibrous substance, to retain the oil and prevent it from running off as soon as it is applied.

It is not so much the quantity of oil that is required to keep a journal well lubricated as it is in the manner in which it is applied. An ordinary journal when once well covered with oil will not retain more than a few drops at a time, the rest soon runs off and is wasted, but it may be that the few drops may be required more frequently than it is convenient for the operator to apply them, especially if he is obliged to stop the machine in order to do so, and in that case the journal may run dry and begin to cut before he is aware of it. Hence the necessity of retaining the oil in the cup and distributing it gradually.

There is no class of machinery that is required at times to work under more unfavorable conditions than wood-working machinery. Under very unfavorable circumstances, the wear and tear is greater, the high speed at which it is required to run in all kinds of dust and grit with which the lumber is sometimes covered, and which is a very difficult matter to exclude from the bearings, is a constant source of trouble and annoyance to the most careful operator. For that reason woodworking machinery requires to be stronger in proportion and more accurately fitted with long bearings, and the most practical and convenient manner for lubricating.

In cold weather, especially when there is no provision made for heating the mill, the trouble with some parts of the machine is rendered still greater. While the fast running parts, such as the cylinder and matcher spindles will always warm up after running a few minutes sufficient to keep the oil in a fluid state, the roller bearings and that portion of the gearing which runs slow and loose upon studs and pins are the parts which are the most liable to suffer in cold weather, when the oil as soon as it comes in contact with the iron becomes chilled. In such places a small oil hole is worse than none at all, and it is safer to slip off the wheel and apply the oil directly to the stud or pin, and for this reason all such gearing should be so arranged that they can be readily and quickly removed for this purpose.—*Timberman.*

FIRE RECORD.

Messrs. J. & J. Kerr's planing mill at Petrolia, Ont., has been totally destroyed by fire.

Colthart & Neilson's furniture factory, at Chatham, Ont., was destroyed by fire the early part of November. Loss. $2,800 ; fully insured.

The custom woollen mill, owned by the Lakefield Lumber & Manufacturing Co., was destroyed by fire at that place recently. Baptie's planing mill had a narrow escape.

The twin saw mills owned by John Robinson and Harvey Copp, at Midjie, N. B., were burned the early part of November. Each mill was insured for $1,000. The loss is $4,000.

French, Wells & Burnies' sash and door factory at Dresden, Ont., has been burned. In addition to the loss of the factory there was material made up to the amount of $2,000. Total loss about $7,000 ; insured for $3,000.

Joseph Paquette's planing mill and sash and door factory at Montreal was totally destroyed by fire on Nov. 5th. The loss is estimated at $70,000, with no insurance. Another large planing mill on the opposite side of the street had a narrow escape.

PERSONAL.

It is rumored that Mr. E. B. Eddy, the well-known lumberman, will be asked to contest Ottawa (Quebec) county against Mayor Rochon.

At a meeting of the Board of Directors of the Quebec Bank, Mr. R. H. Smith was elected president in place of the late Hon. J. G. Ross, deceased.

A London, (Ont.) Syndicate have purchased some timber lands at Little Rock, Arkansas, and Messrs. R. Lewis and R. W. Greer have been sent to that place to look after the company's interests.

It is said that William Carson, the Eau Claire lumberman, who, by the way, is a native of Canada, is one of the most temperate of men. He has amassed considerable wealth, and is one of the most respected citizens of Wisconsin.

Mr. John Brennon, who has been in the employ of the Ontario Lumber Co. at French River for some years, has gone to California where he has accepted a position with Mr. J. M. Dollar, late Toronto manager for the above company.

It is asserted on presumably reliable authority that Hon. A. S. Hardy, provincial secretary of Ontario, will become Commissioner of Crown Lands in place of Hon. T. B. Pardee who is about to resign owing to illness. Col. Gibson, of Hamilton, is mentioned as the probable successor of Mr. Hardy.

Mr. Geo. Humphrey, jr., who was the Montreal resident agent for Cook Bros. of Ontario and a leading Liberal politician, died the early part of November at his late residence at Sillery from galloping consumption, aged 46 years. The deceased unsuccessfully opposed Hon. Thos. McGreevy in Quebec West, during the Dominion elections of 1882.

It is understood in legal and political circles that Mr. H. J. Cloran, of the law firm of Cloran & Bedard, of Montreal, is about to retire from the political and legal arena and enter upon the career of a lumberman. We understand that he has already purchased one hundred square miles of timber lands on the Ottawa river. We hope to hear that Mr. Cloran's well-known business ability will do him good service in the new field in which he has cast his lot.

CASUALTIES.

A young man named Joe Prevost had his fingers amputated by an edger in a Hull saw mill a few days ago.

Geo. Golding was cut nearly through the body by a saw, and died instantly, at St. John's, N. B.

Jean Baptiste Richard, a mill hand employed in Hurdman's mill at Ottawa, had his hand badly jammed in the mill machinery recently.

Joseph Laundry, a boy employed in the saw mills of the E. B. Eddy manufacturing company, of Hull, Quebec, had two toes of his left foot cut off by a circular saw.

Mr. J. R. Booth, one of the Ottawa's lumber kings, had one of his ankles severely fractured some days ago through a truck loaded with lumber running over his foot.

James Hore, engaged in a North Toronto lumber yard, was struck on the head some days ago by a piece of timber. He now lies in the hospital in a precarious condition.

Elie Proulx, while working in Messrs. J. R. Booth & Co.'s saw mill at the Chaudiere was struck with a knot and received injuries from which he died a day or two later, after suffering intense agony.

William Burrel, a lumberman, met with a serious accident while chopping in the bush at Lead Lake, fifteen miles from Gravenhurst. The axe slipping cut his foot through from the toe to the instep.

A young man named Stewart Wood engaged in falling trees in Gilmour's shanty near Oak Lake, (Ont.) was struck by a falling pine, the injury from which resulted in his death a day or two later.

Alonzo Sopher, employed at Richardson's shingle mill, a short distance from Guelph, was holding a shingle to the jointer when it split, throwing the man's left hand against the knives, shaving the flesh off the index finger.

A shocking accident took place some days ago on the Upper Ottawa which resulted in the death of a young man named Oliver Laroque. He was employed above the "Rocher Capitaine," and while engaged in felling a tree was caught under it. The crashing timber fell on his body, and broke three of his ribs. An endeavor was made to bring him to Ottawa for medical treatment, but he expired on the road near Pembroke.

A distressing accident happened on Nov. 24th in the big mill at Deseronto belonging to the Rathbun Co. Felix Cautre was employed on the bucking saws and in some way got caught in the gang and was drawn onto the saws. One saw cut his head open, exposing the brain, another nearly cut off his left arm, while a third split his left foot open. Both legs were also badly cut. On his removal home his arm was amputated and his other wounds dressed by a local physician. He is said to have stood the operation bravely and the prospects are that he may still live.

THE FORESTS OF THE UNITED STATES.

The following is a summary of the annual report of the Division of Forestry of the United States Department of Agriculture, which estimates the forest lands in the States and territories as follows:—

	Acres.
Maine	12,000,000
New Hampshire	3,000,000
Massachusetts	1,389,500
Rhode Island	163,528
Connecticut	650,000
Vermont	1,990,000
New York	8,000,000
New Jersey	2,330,000
Pennsylvania	7,000,000
Delaware	300,000
Maryland	2,000,000
Virginia	13,000,000
North Carolina	18,000,000
South Carolina	13,000,000
Georgia	18,000,000
Florida	20,000,000
Alabama	17,000,000
Mississippi	13,000,000
Louisiana	13,000,000
Texas	40,000,000
Michigan	14,000,000
Wisconsin	17,000,000
Minnesota	30,000,000
Ohio	4,258,767
Indiana	4,[illegible]
Illinois	3,500,000
West Virginia	9,000,000
Kentucky	12,800,000
Tennessee	16,000,000
Arkansas	28,000,000
Iowa	2,300,000
Dakota	3,000,000
Nebraska	1,550,000
Kansas	3,500,000
Wyoming	7,800,000
Colorado	10,630,000
New Mexico	8,000,000
Idaho	10,234,000
Nevada	2,000,000
Utah	4,000,000
Arizona	10,000,000
Washington Territory	20,000,000
Oregon	20,000,000
California	20,000,000

EXCHANGE ECHOES.

Canadian Manufacturer.

A new scheme of utilizing the sawdust of the Ottawa River for the purpose of fuel is proposed. It is claimed that by a system of grinding the refuse into a uniform finess, mixing it with the refuse gas tar from the gas house, and compressing the substance into cakes, a fuel can be made in every way superior to soft coal for open fires. Sawdust rolls were common forty years ago in England and Scotland, and were considered far ahead of peat and grate fires. The cost of manufacturing this kind of fuel is merely nominal, and it is expected that it can be sold at a very much lower price than soft coal. The formation of a company to give the scheme practical effect is mooted.

Northwestern Lumberman.

It would appear from the facts that come to the surface, that lumber will continue to come in good and increasing volume from Canada to the United States—not only to the more important eastern markets, but to Chicago, without the stimulus afforded by a removed customs duty. Canadian lumber has all along cut more or less figure on the Chicago market, and late purchases by men on the American side, of pine timber in Canadian regions, accessible to Chicago by waterway, indicate enlarged operations in such regions from now forward. Of course these purchases have been mainly in anticipation of an increase of value in the timber, and some buyers have been moved by a belief that the free lumber measure in this country would carry. The feeling in Canada is that, in that event, the Dominion would be largely benefitted, and natural operators in the Northwest want a finger in the pie. But the timber in the Spanish river region of Ontario is good property without the duty off, and those that have bought some of it will no doubt find it so. As an evidence of this probability it is instanced that the Buswell Lumber Company, formerly of Grand Rapids, Mich., and now operating on the Spanish river, has been cutting 10,000,000 feet annually, and shipping the most of it at a profit, in spite of a $2 customs duty assessed on this side the line. Many Michigan men now operating in Canada are reported doing well.

AMERICAN NOTES.

—Michigan lumber dealers say that the recent increase in the export duty on Canadian pine logs will stop their importation into the United States.

—Three conal boats and one barge loaded with one million feet of pine lumber from Ottawa, consigned to the Oswego Manufacturing Co., which were at anchor at Cape Vincent, N. Y., harbor for fair weather, dragged anchors Nov. 26th in the severe gale. The wind took several thousand feet of lumber off the boats, all of which came ashore and were picked up.

A correspondent writing to the New York *Lumber Trade Journal* wants to know what kind of lumber was used in the building of Noah's ark. The editor has endeavored to satisfy the correspondent's curiosity by giving his reasons for the belief that Cypress was used in the construction of this ancient but wonderful building.

—Very few charters for timber are being now reported, the Canadian and Baltic seasons being practically over.

—The demand for pine in London is reported as being very sluggish and any violent rise in price may have the effect of checking what little business there is now doing.

—The *Thomas Hillyard* from Quebec bound for Liverpool had a fearful passage during October. During one gale her boats were washed away, one seaman was swept overboard and drowned, and another killed.

—Liverpool advices state that steamer freights by the regular liners from Montreal and Quebec have advanced to 80 s. per standard. From St. John N.B. freights are a little easier but the supply of deals will be small.

—The excess of importation of wood goods up to the end of September over that of last to London amounts to 19,915 loads of hewed wood and 83,734 loads of sawn, or a total of 103,649 loads. Other large wood trading centres exhibit a like result.

—The stock of Quebec timber at Leith has already got reduced to small proportions, and only a few cargoes are expected this fall. This, taken in conjunction with the limited Clyde stocks, will very materially affect the market during the winter and spring months.

—The extensive timber yards and saw mills belonging to Messrs. Watson & Todd, of Liverpool, were burned on Nov. 14th. The loss is estimated at $15,000. It is announced that the fire will in no way interfere with the firm's business, as all orders will be executed as usual from their branch mills.

—Inquiries for next year's goods continue to be received by agents both in England and France, but it seems that buyers are slow in committing themselves to any definite quotation. Many of the importers have expressed themselves willing to repeat contracts closed at the highest prices of the current year, but these offers have been declined. It is generally thought by large buyers that a slight advance in values on free-on-board prices is not unlikely to take place.

—Denny, Mott & Dickson, of London, in their wood circular, under date Nov. 7th, in speaking of Canadian lumber say: "The demand for all classes of this timber has been good; little oak remains in first hands, and prices continue to advance for first-class quality. Square and Waney pine are asked for at advanced prices, the demand by consumers being altogether out of proportion to the small floating supplies. Elm is in good demand with a moderate stock.

Items of Interest.

Timber constitutes a great industry and represents an annual expenditure of $1,365,000,000. Its consumption throughout the world has increased 50 per cent. since 1850.

From the annual circular of the Export Lumber Company it is learned that the total shipments of pine and spruce lumber from the St. Lawrence river to the River Plate for the season of 1888 were 17,980,814 feet—14,544,814 of pine and 3,436,000 of spruce. In 1887 the shipments amounted to 34,036,076 feet, and in 1886 to 29,088,204 feet.

"THE LEADER"

CROSS-CUT SAW,

Manufactured only by

R. H. SMITH CO. LTD.,

ST. CATHARINES, ONTARIO.

A Gauge is furnished with each Saw to regulate the Clearing Teeth.

Full directions for Setting and Filing are etched on every Saw.

The above Saws are made from the best Double Refined Silver Steel, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the front of the teeth to the back.

They are tempered by the Simonds Patent Process, insuring a perfect uniform temper throughout the plate, and stand without a rival as the best, fastest and easiest-cutting Saw known. *For Sale by the Trade generally.*

THE VERDICT

OF

Engineers and Saw Mill Owners, after using our Crown Lubricants the whole season, is fitly expressed by one of them as follows :--

"It's worth its weight in Gold."

"We couldn't do without it."

CANADA PATENT FOR SALE.

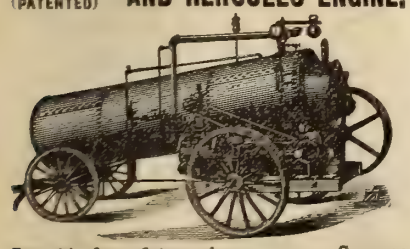
No. 30,065. DATED OCT. 30TH, 1888.

SAW MILL DOG

Will pay 250 per cent. Is entirely new, with no infringements. Sold cheaper and is less complicated than any other, either in the United States or Canada. The principal feature of this Dog is that by the motion of an eccentric lever the log, or cant, is drawn up square against the standard. Working model can be seen at Patent Office. Other patents are now pending. *Will sell cheap.* For further particulars, address

J. H. MINER, Baton Rouge, La., U.S.A.

THE MONARCH BOILER (PATENTED) AND HERCULES ENGINE.



Portable from 6 to 70 horse power. Surpass portable steam power heretofore produced for strength, durability, compactness, and the ease with which they can be moved.

The 70 horse power can be taken over the roughest roads, or into the forest, and set up as easily and quickly as an ordinary 20 horse power portable engine, and as firm as a brick-set stationary engine. Engines and boilers of every size and description. Rotary Saw Mills, Shingle and Lath machines, Law Grinders, Planers, etc. Mill machinery and supplies of every description. Every boiler insured against explosion by the Boiler Insurance & Inspection Co. of Canada. Write for circulars.

SEND for Descriptive List giving full particulars and mention wants, to H. W. PETRIE. Brantford and Torontc.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST,

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

JAS. EPPS & CO., Homœopathic Chemists, London, England.
